PREFACE

The 1969 edition of the Canada Year Book continues a long series of annual publications giving authoritative statistical and other information on almost every measurable phase of Canada's development. The Year Book has, through the years, summarized the statistical data made available by the Dominion Bureau of Statistics and presented it along with legislative and other pertinent information to give concisely, within the covers of one volume, the story of Canada's social and economic progress.

Each chapter of the Year Book contains the latest information procurable at the time of printing but, since the production process extends over almost a year, by the time the volume is off the press later data on some subjects may be available from the DBS or the department concerned. Readers in need of the most recent information available should therefore address themselves to the appropriate DBS Division or Government Department, as the case may require.

In addition, it should be noted that the present volume was prepared during a year in which a major reorganization of Federal Government departments was taking place and for this reason the reader may notice some inconsistency in departmental designations and functions between earlier and later chapters. However, the list of thumbnail sketches of departmental, agency and corporation functions included in the Appendix was prepared after the Government Organization Act, 1969 was passed by Parliament and is therefore accurate as of April 30, 1969, as is the Government Organization Chart inserted facing p. 108.

In addition to the normal updating of all subject matter, feature articles or specially prepared chapter material has been included on "Recent Trends in Urbanization and Metropolitan Growth", pp. 156-165; a summary of the agricultural statistics of the 1966 Census, pp. 515-523; "Fuels in Canada", pp. 637-645; "The First Decade of the Seaway", pp. 841-845; and "Canada's Trade with the European Economic Community", pp. 977-985.

The volume was produced in the Year Book Division of the Dominion Bureau of Statistics by Miss Margaret Pink, Assistant Director and Editor of the Canada Year Book, and the Year Book Division staff under the direction of Pierre Joncas, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by or under the direction of Laurent Tessier of the Drafting Unit. Credits for photographic illustrations used throughout the publication are listed on p. vii.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible, either to the persons or to the public service concerned.

Walter E. Duffett.

SYMBOLS

The interpretation of the symbols used in the tables throughout this publication is as follows:—

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- - amount too small to be expressed or where “a trace” is meant.
- ^p preliminary figures.
- ^r revised figures.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

1 Imperial pint=20 fluid ounces	1 short ton=2,000 pounds
1 U.S. pint=16 fluid ounces	1 long ton=2,240 pounds
1 Imperial quart=40 fluid ounces	1 barrel crude petroleum=35 Imperial gallons
1 U.S. quart=32 fluid ounces	1 ounce avoirdupois=0.91146 ounce troy (oz.t.)
1 Imperial gallon=160 fluid ounces	1 statute mile=5,280 feet
1 U.S. gallon=128 fluid ounces	1 nautical mile=6,080 feet
1 Imperial proof gallon=1.36 U.S. proof gallon	

The following weights and measures are used in connection with the principal field crops and fruit; 2.3 bu. of wheat are required to produce 100 lb. of flour.

	<i>Pounds per Bushel</i>		<i>Pounds per Bushel</i>
Grains—		Fruits (standard conversions)—	
Wheat.....	60	Apples.....	45
Oats.....	34	Pears, plums, cherries, peaches,	
Barley and buckwheat.....	48	grapes and apricots.....	50
Rye, flaxseed and corn.....	56	Strawberries and raspberries	
Rapeseed and mixed grains.....	50	(per qt.)	1.25
All others.....	60		

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

Miscellaneous

- Maritime Provinces=Prince Edward Island, Nova Scotia and New Brunswick
- Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick
- Central Canada=Quebec and Ontario
- Prairie Provinces=Manitoba, Saskatchewan and Alberta
- Btu.=British thermal unit (coal)
- Mcf.=thousand cubic feet (gas)
- n.e.s.=not elsewhere specified
- n.o.p.=not otherwise provided for
- psi. (atomic research)=pounds-force per square inch (pressure)
- D.B.H. (forestry)=diameter at breast height.

North of Montreal lie the famous Laurentian Hills, part of the southern edge of the great Canadian Shield. Scraped and gouged and flattened by the layers of ice that once covered them, they have been left with a unique and striking beauty, delightful to behold.

PART I.—GEOGRAPHY AND GEOLOGY

Section 1.—Physical Geography

Canada is a vast land, the largest in the Western Hemisphere and the second largest in the world. It occupies the northern half of the North American Continent with the exception of Alaska and Greenland and in its almost 3,852,000 sq. miles of territory encompasses many contrasts of topography, climate, vegetation and resources. Most of the population lives within 200 miles of the southern border where the climate is generally moderate and where great resources of land, forest, mine and water have long been under development and utilization. The southernmost point of the country is Middle Island in Lake Erie, at 41°41' N, marking the limit of the southern Ontario peninsula which thrusts deep into the eastern United States and is almost semi-tropical in character. In a straight line 2,875 miles north, past the treeline and far into the arctic tundra is Cape Columbia on Ellesmere Island, Canada's northernmost point, at 83°07' N. From east to west at the widest point, the straight-line distance is 3,223 miles—from Cape Spear, Newfoundland, at 52°37' W, to Mount St. Elias, Yukon Territory, at 141° W.

Geographical situation places Canada at the crossroads of contact with the principal powers and some of the most populous areas of the world. In the south, Canada borders on the United States for a distance of 3,986.8 miles. In the north, the Arctic Archipelago

penetrates far into the polar basin, making Canada neighbour to northern Europe and the Union of Soviet Socialist Republics. In the east, the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west, the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides departure points for crossings of the North Pacific Ocean between continental North America and the Far East. The length of the Yukon-British Columbia border adjoining Alaska is 1,539.8 miles.

Canada's area of 3,851,809 sq. miles may be compared with those of the Soviet Union at 8,649,539 sq. miles,* China (including Taiwan) at 3,705,408 sq. miles,* the United States of America (including Alaska and Hawaii) at 3,615,211 sq. miles,* and Brazil at 3,286,488 sq. miles.* It is more than 40 times the size of Britain and 18 times the size of France. This immense size, which seems to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one third of the total; the occupied farm land is less than 8 p.c. and the productive forest land 25 p.c. of the total. The population, estimated at 20,744,000 as at June 1, 1968, may be compared with 196,920,000† for the United States (1966) and with 83,175,000† for Brazil (1966).

1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land area as agricultural, forested, etc., is given on p. 25 and total area by tenure on p. 26.

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles	
Newfoundland.....	143,045	13,140	156,185	4.1

Franklin.....	541,763	7,600	549,353	14.3
Keewatin.....	218,460	9,700	228,160	5.9
Mackenzie.....	493,225	34,265	527,490	13.7
Canada.....	3,560,238	291,571	3,851,809	100.0

The mileages in Table 2 are another indication of the size of Canada. They show the length of transportation facilities required between the larger cities, between outlying industrial communities built up around large mining or smelting projects and the nearest cities, and between northern outposts and the supplying cities. In this table, mileage given is for the major means of transport used between the points concerned; air mileages are given for most transcontinental distances.

* United Nations Statistical Yearbook, 1967.

† United Nations Population and Vital Statistics Report, Apr. 1, 1968.

2.—Travel Distances between Certain Cities and Other Points of Interest in Canada

NOTE.—The dash used in this table indicates that the distance concerned is of no particular interest. In each case the mileage given is for the type of travel most generally used—road (H), rail (R), air (A) or water (W); air mileages are given for most transcontinental distances. Water and air routes are given in nautical miles.

¹ Via Strait of Canso.

Politically, Canada is divided into ten provinces and two territories. Each province is sovereign in its own sphere and administers its own natural resources, and upon such resources, as related to topography, position and climate, is based the economy of the province. The resources of the Yukon and Northwest Territories, because of the remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government.

The main physical and economic characteristics of each province and territory are described in some detail in the 1963-64 Year Book; this article is available in reprint form. Also, it should be mentioned that the economic development of the country as a whole, based in the first instance on physical features and later on other factors, has formed regions quite distinct from the political divisions. These economic regions are described in an article appearing in the 1962 Year Book at pp. 17-23.

The Canadian Permanent Committee on Geographical Names, administered by the Department of Energy, Mines and Resources, deals with all questions of geographical nomenclature affecting Canada and undertakes research and investigation into the origin and usage of geographical names. The Committee is composed of representatives of the federal mapping agencies and other federal agencies concerned with nomenclature and a representative appointed by each province.

Subsection 1.—Inland Waters

Every year about 8,000,000,000,000 tons of water falls on Canada in the form of rain and snow. Much of it is evaporated but a large amount drains back to the oceans as surface run-off, forming rivers and lakes along its route. This surface water, ceaselessly moving, is the dominant feature of the Canadian environment. It has been estimated, in fact, that about 7.6 p.c. of Canada's total area is covered by fresh water (Table 1). There are probably more lakes here than in any other country in the world—so many that they have never been counted. As much as one seventh of all the fresh, liquid, surface water in the world is contained within Canada's boundaries.

A large portion of this water is contained in the Great Lakes. About 37 p.c. of their total areas is in Canada, as shown in Table 3. These lakes include some of the largest bodies of fresh water in the world, so large that they have measurable, although very slight, tides.

3.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above Sea Level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary

Other large lakes in Canada, ranging in area from 12,300 to 9,500 sq. miles, are Great Bear Lake, Great Slave Lake and Lake Winnipeg. Apart from these, notable for size, there are countless smaller lakes scattered over the major portion of Canada lying within the Canadian Shield. For example, in an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes; in an area of 5,294 sq. miles south-west of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

4.—Elevations and Areas of Principal Lakes, by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water. All elevations are in feet above mean sea level. "Total" refers to the area of the whole lake; "part" refers to the area within the designated province or territory.

Lake storage is very valuable—it represents water that can be drawn upon in time of drought to be replaced in time of plenty. Lakes are natural regulators of river flow. But the true measure of a country's water wealth is the amount of water that can be depended upon to be replaced each year—the amount that remains after evaporation has been subtracted from precipitation. This is the amount that flows in its rivers. Here, too, Canada is very fortunate. The combined mean annual flow of all its rivers has been estimated at 3,500,000 cu. feet per second—about 9 p.c. of the total flow of all the rivers of the world. Set against a population of less than 1 p.c. of the world total, this constitutes a very generous endowment of fresh water.

It is understandable that Canada's history of settlement and industrial development has been moulded by the influence of its great rivers. The country's first industry, the fur trade, flourished because of the ready access to the interior provided by the St. Lawrence River, the Great Lakes and their tributary streams and the many other great and small waterways. Early exploration and settlement depended on this same natural means of access. The plentiful water supplies of the flat and fertile plains of southern Ontario and Quebec attracted an industrious farming people. The river-borne transportation of lumber and later the power of water-driven turbines were vital factors in the building of the country's industrial base. Today, more than ever, water is the key to Canada's development, supplying the renewable energy required for industrial growth, providing easy and relatively cheap transport for bulk raw materials and playing a vital part in the processing of those materials.

Table 5 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indention of names; thus, the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

The map facing this page shows the major drainage basins of Canada. Probably the most important is the Atlantic drainage basin, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From the head of Lake Superior to Belle Isle at the entrance of the Gulf of St. Lawrence, the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a rugged, rocky, plateau region over the edge of which tumble many swift-flowing tributary rivers. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The Saint John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin is the largest in area and its main river is the Nelson. The Winnipeg River, a tributary of the Nelson, is completely developed for hydro-electric power but development of the Nelson itself is just beginning. The two branches of the Saskatchewan River, tributary to the Nelson, drain the great agricultural region of the mid-west and are now the sources of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers. It flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, barge navigation is possible from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro-electric developments and in season swarm with salmon returning inland to their spawning grounds. The Fraser River rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area. The Columbia is an international river which has a total fall of 2,650 feet during its course and has thus a tremendous power potential. Although a considerable portion of the United States potential has been developed, Canadian development is relatively slight. The Yukon River is also an international river but, although the largest on the Pacific slope, is at present relatively unimportant economically.

Subsection 2.—Coastal Waters

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated mileages:—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental

Northern shoreline of Lake Superior

Gold Creek waterfall, near Revelstoke, B.C.

to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 50 to 120 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

Arctic.—The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The topography of the floor of the submerged part of this continental margin is only partly explored but sufficient has been charted to indicate, in common with continental shelves throughout the world, an abrupt break at the oceanward edge to the relatively steep declivity of the continental slope. This slope borders the western side of the Queen Elizabeth Islands and, from it, deep well-developed troughs enter between the groups of islands. Sills across Davis Strait, Barrow Strait and other channels, on which the depth is about 200 fathoms, interrupt the network of deep troughs and separate the Arctic basin from the Atlantic.

That part of the continental shelf bordering the Arctic Ocean in the vicinity of the Queen Elizabeth Islands (see below) is the subject of extensive study. Since 1959 parties based at the joint Canadian-United States weather station at Isachsen on Ellef Ringnes Island have been investigating the oceanography, hydrography, submarine geology, gravity, geomagnetic features and crustal seismic properties of the continental shelf area, carrying out physiographic, hydrological, permafrost and glaciological studies on the islands of the region, mapping the nature, distribution and movement of the sea ice, and running basic topographic control surveys. This work is continuing and should eventually cover all of the unmapped parts of the shelf between Greenland and Alaska. The investigations should yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters; the bathymetry of the continental

shelf and slope and the straits and sounds of the Archipelago; the topography and structure of the shelf and the nature of its sediments, its underlying rocks and possible mineral resources; the structure and physical characteristics of the northern edge of the North American continental platform and its contact with the Arctic Ocean basin; the factors controlling the development of the Arctic landscape and the evolution of the islands; and the changes in sea level, glaciers, sea ice and climate in the recent geological past.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

Subsection 3.—Islands

The largest islands of Canada are in the North and all experience an arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83° 07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait—Viscount Melville Sound—Barrow Strait—Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

Subsection 4.—Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (*), form part of the boundary between political divisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication. Elevations are given in feet above mean sea level.

Section 2.—Federal Government Surveying and Mapping*

The needs for maps and surveys of Canada are met mainly by the Department of Energy, Mines and Resources. Although not all Branches of this Department make surveys and compile maps, many of them are involved in such work either wholly or partly. They compile topographical, geological and aeromagnetic maps, aeronautical and hydrographic charts, as well as specialized maps showing electoral district boundaries, land use and other features. In carrying out these tasks, the Department is guided partly by long-range plans based on general national needs and partly by requests from other government

* Prepared by H. G. Classen, Public Relations and Information Services, Department of Energy, Mines and Resources, Ottawa.

agencies and private enterprise. Some types of maps and surveys are also produced by provincial and private agencies and, to avoid duplication, the Department co-ordinates its work with these bodies. Other types—such as hydrographic charts—are produced exclusively by the Department.

The staff of the Department numbers about 4,000, of whom 1,000 are scientists and engineers and 1,300 are technicians. Each year, some 1,500 men are sent into the field to make surveys and to carry out research. Of the various Branches, the following are particularly concerned with surveying and mapping: Surveys and Mapping Branch (geodetic and topographic surveys, legal surveys of Canada lands, electoral maps and aeronautical charts); Marine Sciences Branch (hydrographic charts of sea coast and inland navigable waters); Inland Waters Branch (a wide variety of surveys on inland waters); Geological Survey of Canada (geological features); and Observatories Branch (geophysical maps).

Types of Surveys.—In the field of geodesy, the Geodetic Survey maintains a network of horizontal and vertical control points across Canada. Much of its present activity is centred on achieving greater density of control and closing gaps in southern Canada. The ultimate goal is the establishment of at least one horizontal and vertical control point within 10 miles of any point in established and economically important areas. During the summer of 1968, 18 geodetic parties were in the field extending or strengthening the horizontal and vertical network.

The Topographical Survey is proceeding with the establishment of control points at smaller intervals and the mapping of the country at the most popular scales—1:25,000 and 1:50,000. The 1:250,000-scale series, consisting of about 925 maps, was virtually completed in 1967 and revision and updating of these maps are continuing as new information becomes available. Of the 1:50,000 series, about 7,700 different maps are available, representing over one third of Canada's land area. Another 500 maps at the 1:25,000-scale, or $2\frac{1}{2}$ inches to one mile, cover the major cities and other areas of economic importance. The Topographical Survey had 37 officers in the field in 1968, and collaborated with the Geodetic Survey in the extension of first-order control in the Great Slave Lake area and in several municipal control surveys aimed at providing Canadian cities with a firm, permanent basis for planning public works, redevelopment, expansion and other projects.

The Legal Surveys Division is responsible for the technical management of legal surveys of land under federal jurisdiction, such as the northern Territories, National Parks and Indian Reserves. It also executes such surveys on behalf of administering departments, collaborates in the demarcation of provincial boundaries, prepares descriptions of electoral districts and generally provides land surveying services to other departments. Seventeen field parties were active in 1968 as well as one interprovincial boundary commission. These field parties undertook projects in Newfoundland and Prince Edward Island.

The Surveys and Mapping Branch is the major agency in Canada for the preparation of aeronautical charts showing airports, airways and radio and other aids necessary for air navigation.

As a service to map-makers and others interested in that field, the Department maintains the National Air Photo Library, containing a collection of all air photographs taken by or for the Federal Government. During 1967, the Library received 61,000 new photos, bringing the total collection to well over 3,000,000. The seventh edition of the *Air Photo Coverage Map of Canada* is available to assist users with their orders.

Hydrographic and oceanic surveys in Canada's navigable waters and the adjacent oceans are conducted by the Department's Marine Sciences Branch. Operations are directed from Ottawa and carried out through three regional offices—the Atlantic Oceanographic Laboratory in the Bedford Institute, the Pacific Coast Regional Office at Victoria and the Central Regional Office at Ottawa. For its survey and research work, the Branch operates a fleet of ships and launches, including some chartered vessels. This fleet is being modernized and increased. Three new ships were launched in 1967 and one in 1968.

Six of the major ships operate out of the Bedford Institute, five out of Victoria and two in the Great Lakes. Two chartered vessels are based in the Atlantic Region and two in the Great Lakes. Land-based parties, equipped with launches, operate on coastal and inland waters. Branch activities are planned to meet the needs of commerce, industry, fisheries, maritime defence, and weather and ice forecasting, and to provide general coastal charts for fishermen and recreational boating in the inland waters. In 1968, 987 navigational charts were on issue, of which 28 were first editions that year, and 268,000 navigational charts were distributed.

The Inland Waters Branch is responsible for a wide variety of surveys on Canada's inland waters with emphasis on the important fields of water pollution, conservation and

The Bedford Institute of Oceanography at Dartmouth, N.S., with its "floating laboratories", has become an internationally recognized centre for oceanographic research. Its program embraces physical and chemical oceanography, marine geology, air-sea interactions, tides and currents, hydrographic charting and instrument research and development. The Institute is an agency of the federal Department of Energy, Mines and Resources but houses other research units as well, including the Marine Ecology Laboratory of the Fisheries Research Board.

The CSS Hudson, a fully equipped research vessel based at Dartmouth, will set out in late 1969 on a year-long expedition that will completely encircle North and South America. Aboard will be scientists in many disciplines from government departments, universities and institutes and investigations will range from oceanographic circulation to marine biology. Study of the geological and geophysical features of Canada's continental shelves is the prime object of the northern part of the voyage.

utilization. It carries out, for instance, continuous surveys and surveillance of the physical environments of lakes; surveys of water levels, stream flow, sediment transport and shore erosion; groundwater surveys, and surveys of existing and projected uses of water in Canada.

Geological surveys provide an inventory of the potential mineral resources of Canada, aid in the discovery of mineral deposits, and assist in other aspects of the national economy influenced by geological factors. Each year approximately 100 parties are placed in the field. The first systematic reconnaissance of the geology of Canada is approaching completion, and attention is increasingly given to more fundamental research. Approximately 350,000 copies of maps and reports on geological surveys and research are distributed each year.

Both the Geological Survey and the Observatories Branch carry out geophysical surveys, resulting in maps showing such features as variations in terrestrial magnetism, gravity and seismology. The geophysicists of the Geological Survey are interested mainly in outlining geological features and those of the Observatories aim at a better over-all knowledge of the earth. Observatory seismologists have devised new procedures for estimating earthquake risk for engineering purposes and are compiling, by computer, a new earthquake zoning map for Canada for National Building Code purposes. This information is gathered primarily by a network of 28 first-order seismograph stations, and supplemented by temporary, local studies. The Observatories Branch compiles and publishes magnetic charts. Late in 1968, it began an airborne magnetic survey over the Province of British Columbia and a 200-mile-wide strip along the Pacific Coast, using the three-component magnetometer, which it designed and developed a few years ago. In 1967 Observatory geophysicists completed the compilation of a new gravity map of Canada, published in four sections at a scale of 40 miles to the inch.

In the drafting and printing of the maps, highly advanced techniques for the automatic transfer of terrain features from air photos to drafting sheets and precise lithographing are combined to assure speedy processing of field data and the production of colourful, easily understood and relatively inexpensive maps for every type of user, from vacationer to town planner and from prospector to pilot. The Department operates a large modern plant to print the maps and charts compiled by its several Branches as well as maps and charts compiled by other government departments and agencies. The Surveys and Mapping Branch has a stock of over 17,000,000 maps from which it distributes more than 3,000,000 annually.

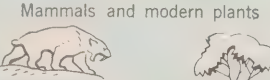

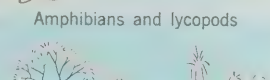

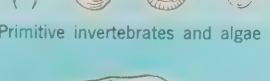

Section 3.—Geology*

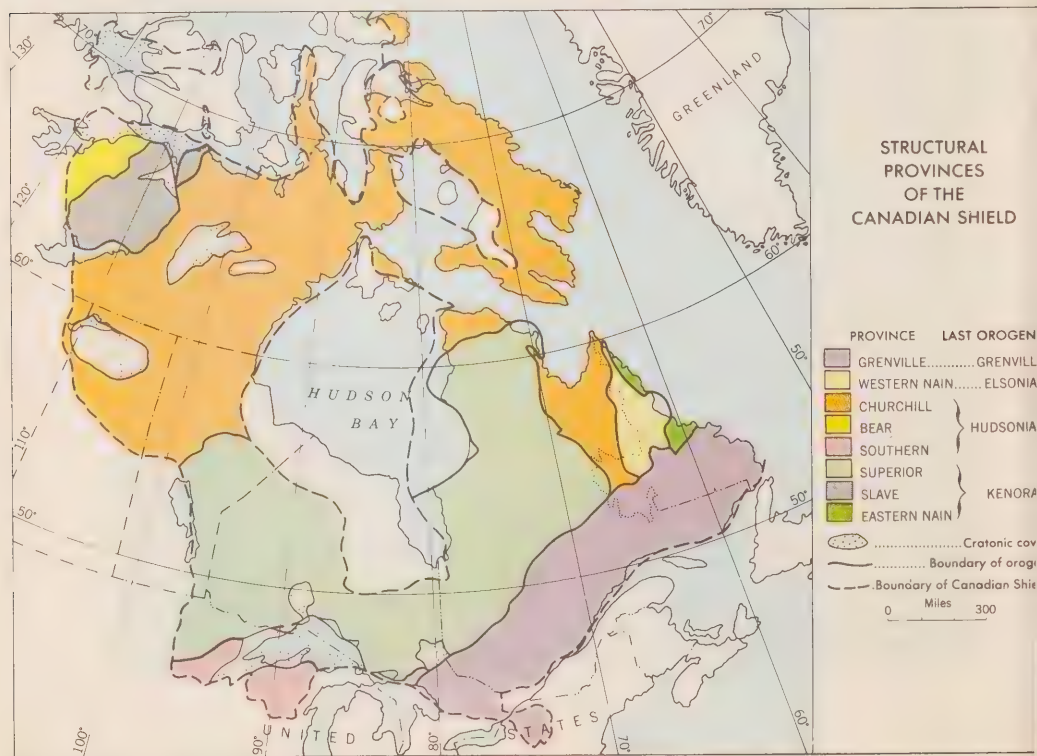

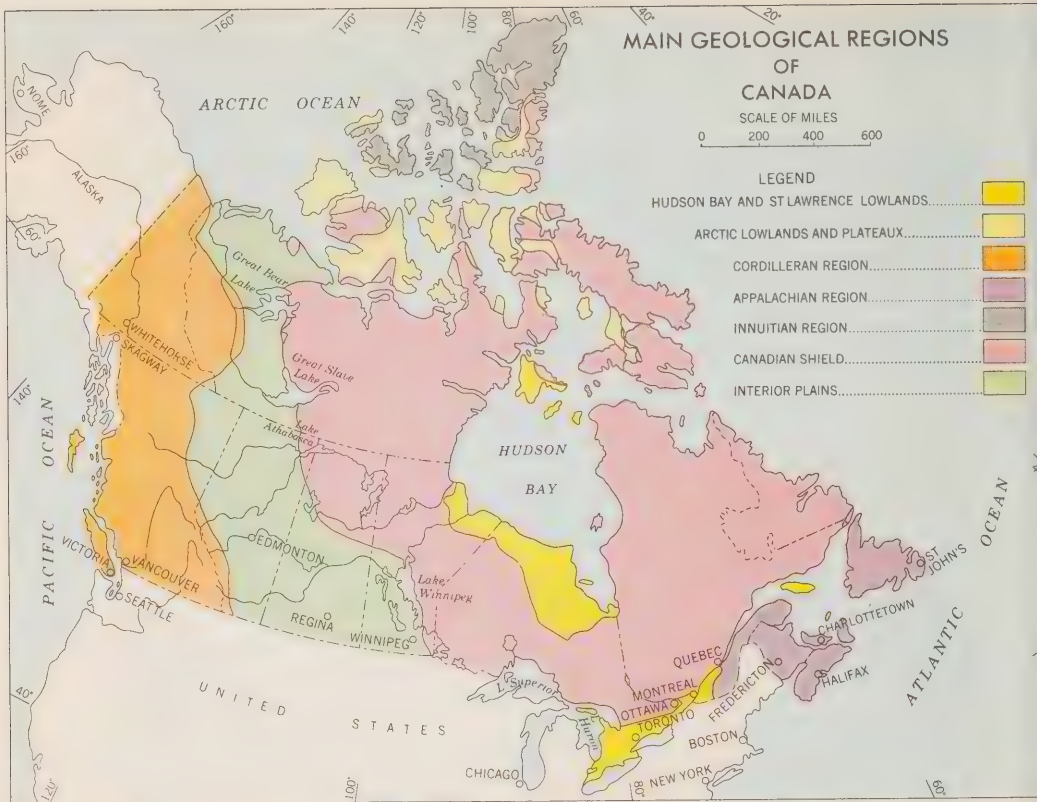

The bedrock foundation of Canada and its adjacent continental shelves seem rigid and unchanging to human eyes, yet, in terms of geological time, these rocks represent only a momentary stage in the evolution of the Continent, an evolution which began more than 4,000,000,000 years ago. Geological study of most of the present land surface of Canada has shown that at various periods and in various regions dark molten rocks rose from great depths, volcanoes erupted on the ancient land and sea floors, thick sequences of sediments accumulated, granites were either intruded as molten magma or derived from earlier rocks during intense folding and mountain building, erosion wore down or subdued the older mountain chains, shallow seas repeatedly encroached on and receded from the Continent of today, continental glaciers covered most of Canada and, as part of these geological processes, valuable minerals and fossil fuels became concentrated under exceptionally favourable conditions. These interrelated geological processes have produced the buried crust and the present face of Canada. They control the distribution of its economic mineral deposits, its physiography and, in large part, its present and potential land use.

The primary geological subdivisions of Canada are outlined in the following sections. The Canadian Shield forms the ancient nucleus of the Continent. As well as comprising the vast areas exposed in Central and Northern Canada, the Shield extends beneath the

* An outline extracted from a more detailed article on "Geology and Economic Minerals of Canada", prepared by W. D. McCartney of the Geological Survey of Canada, appearing in the 1967 Year Book, pp. 19-32.

veneer of younger marine sediments exposed at the present surface in the Hudson Bay region, some Arctic islands, the St. Lawrence Lowlands and the Interior Plains. West of the Interior Plains, and north and southeast of the Canadian Shield, deep, elongate troughs (geosynclines) developed. These geosynclines received sediments and volcanics which, by folding, were converted into the mountain belts of the Cordilleran, Inuitian and Appalachian regions.

The Canadian Shield.—Precambrian evolution of the present Canadian Shield extended over more than five sixths of known geological time. During this immense interval, many cycles of volcanism, sedimentation, intrusion, metamorphism, mountain building, erosion and ore formation have been completed. The complexities of this history have become better understood as the rate of geological reconnaissance mapping, with the support of helicopters since 1952, has increased and as absolute ages of minerals have been determined by isotopic ratios from about 1,500 well-distributed samples of the Canadian Shield. Many of the absolute ages represent the ages of four main periods of mountain building termed orogenies; these are indicated on the geological time chart facing p. 16. The lower map facing this page shows the eight structural provinces recognized in the Shield. Each structural province is defined by the equivalent isotopic ages of their terminal orogenies as well as being characterized by variations in rock types, degree of metamorphism, and dominant types of ore deposits. Following one or more major orogenies in a region, that portion involved was stabilized, and relatively undeformed younger Precambrian erosion products were deposited to form basins of cratonic cover rocks, most of which are shown on the map of the Shield. These relatively undeformed late Precambrian basins and remnants of early Palaeozoic sediments show that the Canadian Shield has been remarkably stable since late Precambrian time, subject only to encroachment of younger seas and varying degrees of uplift. In relatively recent geological times, Pleistocene glaciation with scouring of bedrock and deposition of clastic materials has profoundly affected the present drainage and physiography of the region.

A large part of the Shield, extending from Georgian Bay to the Strait of Belle Isle, has long been recognized as forming a distinct segment called the "Grenville". It was named after the Grenville series, characterized by crystalline limestone, impure limy strata, and large areas of sedimentary gneisses in various stages of alteration to granite. The eastern part of the province contains large igneous intrusions of anorthosite. The age relations between Grenville strata and those of the neighbouring Superior province are puzzling. Near Sudbury, as well as at the south end of the Labrador Trough, beds can be traced across the boundary into more metamorphosed rocks of Grenville type. It is believed, therefore, that the distinctive features of the Grenville may be related more to the time and degree of metamorphism than to distinctions in the original age of deposition of strata.

The areas of undeformed Precambrian cratonic cover rocks shown on the facing map represent dominantly clastic detritus washed into basins from the consolidated, nearby, older rocks. At times, marine incursions into these basins led to deposition of limestone and dolomite, and volcanics were deposited in others.

The Appalachian Region.—This region comprises the Maritime Provinces and southeastern Quebec and is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a long, linear trough or geosyncline that existed mainly in Palaeozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region lies adjacent to the Canadian Shield and to the St. Lawrence Lowlands. The strata in the Appalachians have been folded and faulted along axes that strike northeasterly except for local regions such as the Gaspé Peninsula where strikes swing to the east. Thus, strata of different kinds and ages and some belts of intrusive rocks normally form northeasterly-trending bands, many of which are responsible for development and orientation of peninsulas, bays and ridges of the region. Two principal periods of orogeny called the Taconic

and the Acadian have been recognized. The Taconic occurred near the close of Ordovician time and the Acadian about Middle Devonian time. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic as well as areas that were not, and the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

Metamorphosed Precambrian rocks of Grenville type are exposed to form the Long Range of western Newfoundland and small areas in Cape Breton and New Brunswick. On the east flank of the Appalachian geosyncline, as exposed in southeast Newfoundland, younger Precambrian volcanics and sediments are relatively unaltered and were intruded by small granite bodies 580,000,000 years ago. Although Precambrian rocks probably underlie much of the central Appalachians, they are buried beneath the thick Palaeozoic sequence.

Cambrian slates, minor limestones and local areas of volcanics lie above and adjacent to Precambrian rocks. Massive sulphide deposits in schists derived from Cambrian volcanics in southern Cape Breton and southeast Quebec were formerly mined. The overlying Ordovician beds were formed at the early stage of development of the Appalachian geosyncline. From west to east, and depending on their position in the geosyncline, the thick Ordovician sections comprise limestone and/or slate in western Newfoundland and adjacent to the St. Lawrence Lowlands in southeast Quebec. Silurian strata are rather similar to Ordovician rocks but are not known to contain large mineral deposits. Unlike the Ordovician submarine volcanics, some or most of the Silurian volcanics were formed on land. This may be one factor in the marked difference in known ore content of the two volcanic assemblages.

In Devonian time, granite batholiths were emplaced in the Maritime Provinces, and smaller stocks of the same age were intruded in Gaspé and southeastern Quebec. At this time, older beds were folded and metamorphosed to varying degrees, particularly near the margins of the granites.

Following the folding and granite intrusion that formed the Appalachian Mountains, adjacent basins were rapidly filled with coarse and progressively finer-grained detritus eroded from the adjacent mountains. Some areas included marine beds, such as the petroliferous Albert shales of eastern New Brunswick which yield oil and gas. After initial infilling of basins, shallow Mississippian seas encroached on the valleys and deposited limestones. Many thousands of feet of clastic sediments were deposited after the Mississippian seas retreated. These beds of Pennsylvanian age contain the commercial coal measures of Nova Scotia. In Triassic time, outpourings of basalt, particularly preserved adjacent to and below the Bay of Fundy, terminated rock-forming processes in the Appalachians. Subsequent erosion has yielded the present, fairly subdued topography of this former mountain chain.

The Cordilleran Region.—The Cordillera of Western Canada consists of three parallel northwest-trending geological and topographical systems. The Eastern System of western Alberta, eastern British Columbia, eastern Yukon, and western Northwest Territories includes the Rocky, Richardson, Franklin and Mackenzie Mountains and foothills, and several intervening plateaux. Comprising the Western System are the Coast Mountains along the west mainland of British Columbia, the St. Elias Mountains in southwest Yukon, the Queen Charlotte Islands and Vancouver Island. The Interior System lies between the Eastern and Western Systems. It contains the plateaux, plains and subdued mountain ranges of the interior of British Columbia and Yukon Territory.

Unmetamorphosed Precambrian to Cretaceous sedimentary strata form most of the Eastern System. These sedimentary strata, which have been uplifted several thousand feet by fault movements, are well exposed in the Rocky Mountains. The Interior System is composed largely of metamorphic, sedimentary and volcanic rocks of Precambrian to Mesozoic ages, which are intruded by numerous, generally unconnected, granitic stocks and batholiths. In places, these rocks are overlain by great thicknesses of Cretaceous and

Tertiary volcanic and sedimentary strata. Flat-lying Tertiary basalt flows form many of the plateaux. In the Western System, the rugged Coast Range consists of almost continuous exposures of steeply eroded granitic rocks of Mesozoic and Tertiary ages flanked on both sides by late Palaeozoic and Mesozoic volcanic rocks and by basins of Cretaceous and Tertiary sedimentary rocks.

During late Precambrian times, beds of quartzite, argillite, dolomite and other sedimentary rocks now comprising the Purcell and Windermere beds were deposited in the eastern Cordilleran geosyncline, a vast shallow sea that extended from south of the present Canada-United States border to the Arctic Ocean. From Cambrian until mid-Devonian time, sedimentary strata consisting of shale, quartzite and limestone continued to be deposited in the area which now forms the Eastern and Interior Systems. In southeastern British Columbia, the world-famous Sullivan zinc-lead orebody lies in Purcell beds and is thought to have formed during late Precambrian time.

Beginning in the mid-Devonian and lasting until early Jurassic, the Western System and most of the Interior System consisted of a deep oceanic trough in which accumulated submarine basalts and fine argillaceous and cherty sediments such as those of the Permian-Carboniferous Cache Creek Series and the Triassic Takla Series. Meanwhile, sedimentary strata were forming in the more shallow waters of the Eastern System, east of the present Rocky Mountain Trench. Thus, in the Rocky Mountains, Palaeozoic limestones, dolomite, quartzite and shale are overlain in many places by similar Mesozoic rocks.

The first large granitic bodies were intruded into rocks of the Interior and Western Systems during early Jurassic time. They were composed mainly of granodiorite and quartz diorite, but ranged in composition from gabbro to granite. These intrusions were accompanied by folding, faulting and metamorphism. Although this orogeny may have been most intense during late Jurassic to early Cretaceous time, intrusion continued until early Tertiary time. Many mines in the Cordillera are related to Mesozoic and Tertiary intrusions. Uplift of the rocks during these processes created mountain chains and, by early Cretaceous time, rhyolites, andesites, basalts and sediments were being deposited in inter-mountain basins largely separated by the uplifted areas. Erosion of the mountains followed and, in late Cretaceous time, sandstones, conglomerate, shale and extensive beds of coal accumulated in large isolated basins such as that now occupied by the Nanaimo Series on Vancouver Island. Gradual uplift continued so that by Tertiary time the basins were very local and entirely continental. Sandstones and other sediments derived from elevated areas continued to be deposited in the low-lying valleys.

Uplift and mountain building in the Eastern System was delayed until the Laramide Orogeny in early Tertiary time. Unlike the earlier orogenies to the west, no significant granitic bodies were intruded in the Eastern System. In many parts of the Rocky Mountains, Precambrian and Palaeozoic strata were thrust several miles to the east along low-angle westward-dipping fault planes. Thus, these transported older rocks commonly came to rest above younger beds. At the same time and again in late Tertiary time, the eroded Western and Interior System rocks, as well as those of the Eastern System, were again uplifted. Erosion, including glacial scouring, which in places has continued to the present day, formed deep valleys in the elevated rocks and has produced the present configuration of the Coast Range, the Rockies and the intervening mountain chains.

In the Interior System, much lava was deposited on the plateaux at various times during the Tertiary Period, mainly in or about Miocene time. The lavas are chiefly basaltic and apparently welled from long fractures rather than from individual volcanoes. Sandstone, shale and volcanic ash were deposited in local freshwater basins in the same belt.

In latest Tertiary and Pleistocene times, some uplift and minor volcanic deposition occurred in the Western and Interior Systems. Very recent, post-glacial volcanic activity is represented by several well-preserved cinder cones in north, southwest and central British Columbia.

Glaciation, as in other parts of Canada, was widespread in the Cordillera during the Pleistocene Epoch, and glaciers persist today in many mountain systems, chiefly in the

St. Elias and Coast Mountains and the Columbia Ice Field in the Rockies. A large part of the Yukon Territory, however, escaped Pleistocene glaciation because the high St. Elias Mountains barred moisture-laden winds from the Pacific to such an extent that ice did not accumulate in parts of the interior, despite the depressed temperatures of the time. This lack of glaciation was largely responsible for the preservation of the Klondike placer gold deposits.

Innuitian Region.—North of the Arctic Plains and Plateaux, where Palæozoic limestones rest on Precambrian generally-stable crystalline rocks, deep crustal depressions were initiated in late Proterozoic time and received thick deposits of carbonates and shales (miogeosynclinal type) and, in northern Ellesmere Island, volcanics and greywackes (eugeosynclinal type). In the southern basins, Proterozoic sediments are mainly carbonates and coarse to fine clastic sediments. Overlying these conformably are thick layers of lower Palæozoic carbonates which are thicker and include more abundant dark shales to the north. Middle Ordovician gypsum beds extend in places across the southern basins. Carbonates are admixed with muds and sands in parts of the Upper Silurian to Middle Devonian beds, and the influx of these clastic materials probably reflects relatively minor orogenies and periodic uplifts such as the Boothia Arch in the region. Folding of the eugeosynclinal volcanics of northern Ellesmere Island produced land areas from which sands were swept southward to form Upper Devonian non-marine sandstones in the miogeosynclinal basins. The total assemblage of sediments is more than 35,000 feet thick in some districts. The dominant folding of the Franklinian geosyncline, called the Ellesmerian orogeny, occurred near the close of Upper Devonian time. With the exception of the Cornwallis fold belt discussed below, the resulting folds of the Innuitian Region trend southwesterly from northern Ellesmere Island and swing westerly through the Parry Islands. The Cornwallis fold belt interrupts this trend at right angles because it lies along a buried north-trending prong of Precambrian rocks, which extend from exposures of the Boothia Peninsula. This elongate Precambrian basement rose periodically at least six times to produce north-trending faults and folds in the overlying Palæozoic beds of the Cornwallis fold belt, whereas the Franklinian geosyncline was deformed by somewhat younger and more widespread compressional crustal forces.

Following the Ellesmerian orogeny, a vast area including the present Sverdrup Islands and much of western Ellesmere Island was depressed to form the site of deposition of a composite thickness of 60,000 feet of Pennsylvanian to Tertiary volcanics, shales, sandstones, some gypsum and, in the upper part, a thick assemblage of non-marine clastic sediments. The rocks of this Sverdrup Basin were deformed about the end of the Mesozoic Era by the Laramide orogeny. Late Palæozoic gypsum beds, which tend to flow under high pressure, were forced upward to intrude overlying Mesozoic beds. Gypsum diapiric domes later penetrated Tertiary beds.

Arctic Lowlands and Plateaux.—These geological and physiographic divisions lie in large basins separated by arches and belts of exposed Precambrian crystalline rocks. Gently inclined or flat sediments underlying the basins tend to be thin sandstones and limestones near the basal contact with metamorphosed Precambrian rocks but limestones and dolomites of Middle Ordovician to Early Devonian age are the principal rock types and at some localities are estimated to be up to 18,000 feet thick. Shales, sandstones and restricted areas of conglomerates of Middle Devonian to Late Devonian age are normally the youngest rocks preserved.

Arctic Coastal Plain.—This plain comprises late Tertiary or Pleistocene sand and gravels, which dip gently seaward along the northern exposed border of the Innuitian Region. The very young beds cover the extensions of eroded fold belts and the Sverdrup Basin. Although of minor land extent, they or their equivalents probably extend far out on the Arctic continental shelf.

The Interior Plains.—The Interior Plains are underlain by undisturbed or gently flexed or tilted sedimentary strata, which overlap the western border of the Canadian Shield and merge with the eastern foothills of the Cordilleran region. The Shield slopes at a rate of 15 feet per mile under the Great Plains, in the western part of which the overlying strata reach a thickness of 10,000 feet. The older overlying beds have been bevelled by erosion along the border of the Shield, exposing in central Manitoba marine beds of limestone, sandstone and shale of Ordovician, Silurian and Devonian ages. Farther north the exposed Palaeozoic strata are mainly Devonian. The Palaeozoic formations are overlain by early Mesozoic strata of marine origin and these by both marine and freshwater Cretaceous formations, which are the uppermost strata in much of Saskatchewan and Alberta. In places, however, as at Turtle Mountain in Manitoba and the Cypress Hills in Saskatchewan, these are overlain by remnants of early Tertiary formations.

St. Lawrence and Hudson Bay Lowlands.—The St. Lawrence Lowlands are underlain by marine beds deposited during much of Palaeozoic time. Rather similar late Ordovician to Devonian beds are exposed in the Hudson Bay Lowlands. Small areas of Palaeozoic beds are preserved at various localities on the Canadian Shield between these two Lowlands and suggest that arms or shallow straits of Palaeozoic seas may have connected the present Hudson Bay and the St. Lawrence Lowland areas. The St. Lawrence Lowlands from Quebec City to Windsor are occupied by about one half of the population of Canada, supported by much arable land and major industrial concentrations. These Lowlands are divided by an exposed southeast-trending prong of the Canadian Shield called the Frontenac Axis, which extends into the United States northeast of Lake Ontario. Southwest of the Frontenac Axis, marine sedimentary rocks of Cambrian to Mississippian age rest on buried Precambrian rocks. Known formations there have an aggregate thickness of almost 6,000 feet. Rocks are mainly limestones, shales and sandstones deposited in generally shallow seas.

Surficial Deposits

The continental glaciation of most of Canada has removed weathered bedrock and residual soils and has almost certainly removed some types of ores such as pre-Pleistocene placer gold deposits, laterites, and upper portions of metallic and manganiferous ore deposits, which had formerly been enriched under stable near-surface conditions. Material deposited includes dominantly clastic detritus such as tills, esker gravels, outwash gravels and sands, or rock flour deposited in lakes or shallow seas in the form of multiple layers of varved clay or massive clay beds. Maps showing the surface distribution of these materials, published by federal agencies, reflect some physiographic features and present and potential land use.

Section 4.—Archaeology

This Section of the 1968 Year Book contains a special article on "Archaeology in Canada", prepared by scientists of the National Museum of Man, National Museums of Canada. The article is a review of the study of Canadian prehistory and summarizes the interpretations that have so far been made of findings by scientists working in this discipline throughout the years. The outlines therein of recent archaeological work undertaken in Eastern Canada, Western Canada and Northern Canada are brought up to date in the following paragraphs which cover National Museum of Man staff and contract-supported field work conducted during 1968. Work by other archaeologists had not been reported at the time of writing.

Archaeological Work in Eastern Canada.—J. V. Wright located 39 new sites and re-examined six known sites in central Ontario and western Quebec. A northern Ontario survey of Attawapiskat Lake produced nine sites including one stratified site which appears to possess elements of the entire prehistoric occupation of the region; excavation of this site is planned for 1969. D. Sanger conducted a survey of the Tobique River valley in northern

New Brunswick. Although agricultural and lumbering activities have destroyed many sites in this area, several worthy of future excavation were located, ranging in age from Archaic to late prehistoric and generally associated with a salmon-holding pool and a small tributary creek or spring. Sites were also tested in the headwaters of the Miramichi River, along the Saint John River and at the mouth of that river. A brief reconnaissance of the east coast of New Brunswick suggested good potential for further investigations in that area.

Contract-supported work in Eastern Canada included the following projects: K. C. A. Dawson, Lakehead University, excavated a large prehistoric site on Lake Nipigon, Ont.; Selwyn Dewdney, London, Ont., located and recorded aboriginal rock art in Manitoba and Ontario; William E. Hurley, University of Toronto, conducted an archaeological survey of southwestern Ontario; J. N. Emerson, University of Toronto, administered the salvage test excavation of the Montreal River site on Lake Timiskaming, Ont., preparatory to a major excavation of this large stratified site with an occupation spanning at least 6,000 years. Jacques Bordaz, Université de Montréal, undertook archaeological administration of the Pointe-aux-Buissons site excavation near Beauharnois, Que., which is being carried out by members of the Quebec Prehistoric Archaeology Society; René Ribes, Le Centre des Études Universitaires, undertook field work in the Trois-Rivières region of Quebec; John Erskine, Wolfville, N.S., located and recorded archaeological sites in the Passamaquoddy Bay region of New Brunswick; James Tuck, Memorial University, excavated an Archaic burial site at Port-au-Choix, Nfld.; and William Fitzhugh conducted an archaeological survey of Lake Melville in Labrador.

D. MacLeod continued field programs in the Churchill Falls area of central Labrador and the Twillingate region of northeastern Newfoundland. The Labrador enterprise is primarily a salvage operation in anticipation of flooding by the Churchill Falls Hydro Development and is yielding background for Montagnais-Naskapi culture history. Problems involving widespread relationships between the Maritime Archaic and Eskimo cultures are gleaming grist from the Newfoundland Island program.

A rich "red paint" cemetery of the same type documented by Moorehead in Maine has been excavated at Twillingate and two related occupation sites nearby are under study. Dorset cultural remains also abound in the area. It is anticipated that the entire sequence from Archaic to Beothuk will be traced here and that the data will be, as they have been so far, mutually complementary to current research being carried out by Memorial University, St. John's, particularly as regards the Port-au-Choix complex.

Archaeological Work in Western Canada.—R. Wilmeth excavated three houses at the Potlatch site, Anahim Lake, B.C. The first of these, Potlatch House, was a rectangular structure, its wall consisting of a series of posts set in a trench with logs lying horizontally between the posts and the inside of the trench. The material from Potlatch House was largely historic, consisting of iron nails, gun parts, copper scrap, glass and trade beads, with a few projectile points, knives and scrapers of native manufacture. Tshandu House was a semi-subterranean dwelling with a floor area sloping up about .3 meters to a bench which extended to the periphery of the house. A row of heavy cobbles extending around the house periphery seemed to represent the area where butt ends of rafters rested. The other semi-subterranean dwelling, Spalyan Bat'o House, appeared to be similar in construction but was more difficult to define. Both houses contained a predominance of aboriginal material and only very small numbers of European trade goods. At present, the site appears ascribable to the late eighteenth century-early nineteenth century Chilcotin.

G. F. MacDonald conducted archaeological field research, with a crew of 26 university students and a Museum technician, on five prehistoric sites on the northern coast of British

Columbia. The sites were located on an east-to-west transect between the first canyon of the Skeena River near Terrace to Lucy Island, a small offshore island on Hecate Strait. All five sites have a minimum of 3,000 years of cultural deposit and were chosen to provide an example of the sequence from each of five important ecological areas. At the Kitselas Canyon of the Skeena, a stratified fishing site with 13 feet of cultural deposits produced more than 5,000 stone tools. A cobble tool and spall industry complemented the fine grain industry throughout the sequence, and in the upper portions of the deposit a third industry of pecked, sawn and ground stone was well represented. On the coast, a small shell midden, which served as a temporary camp at the mouth of a salmon stream and close to inland hunting territories, was investigated. The first site of the Prince Rupert harbour excavation produced a sample of approximately 300 specimens in a 1-foot deposit; one dozen human burials were encountered. From the second site in the Dodge Cove area, which had undergone virtually no disturbance since its abandonment in late prehistoric times, more than 40 complete burials and a dozen complete dog skeletons were recovered. Two house benches were encountered, each with its own dump area in which the burials were located. Of considerable interest was a wide band of waterlogged deposit running through the midden and containing preserved wood and fibre artifacts in undetermined quantities.

Contract-supported work in Western Canada included the following projects: A. L. Bryan, University of Alberta, excavated a deeply stratified site in the Cypress Hills Provincial Park of Alberta and conducted archaeological reconnaissance north of Calling Lake and along the Athabasca River; Ruth Gruhn, University of Alberta, continued excavation at sites in Alberta in connection with the long-term project to determine geochronology and the sequential ecology of prehistoric man in different environmental regions of the province; C. E. Borden, University of British Columbia, reported on the Milliken and Mazama phases of the Fraser Canyon sites in British Columbia; Donald H. Mitchell, University of Victoria, conducted test excavations at three sites on the Chilcotin Plateau which were discovered in 1964; and Jerome Cybulski, University of Toronto, recovered burials from the Tsimshian area of British Columbia.

Archaeological Work in Northern Canada.—W. N. Irving returned to the Old Crow area in northern Yukon Territory to search for sites intermediate in age between the Athabaskans of 1,000 years ago and cultures of Pleistocene age reported earlier. Half a dozen such sites were found but none are associated with the ancient beach lines that surround the Old Crow Flats and none can be dated directly. Of considerable interest is a caribou compound made of timber which was operated until the introduction of rifles about 1895. The corral is two parallel fences half a mile long and originally six feet high; the wings are each about two miles long. The size of the operation implies a level of social organization and administrative power far in excess of those usually attributed to northern forest hunters. Additional reconnaissance in the Dawson area turned up several late prehistoric sites similar to those near Old Crow attributed to the Kutchin. Directly related to Irving's work is that of contractors Richard E. Morlan and William B. Workman mentioned below.

R. J. McGhee carried out field work in the vicinity of Coppermine, N.W.T. Sixteen archaeological sites were located in the lower Coppermine River valley, the majority clustered about Bloody Falls which is the first major rapid 10 miles above the mouth of the river. Six sites situated on the edge of a terrace west of the river at an altitude of 85 meters above sea level, the marine limit approximately 6000-8000 years ago, yielded "Plano" points of three distinct types. These finds suggest that people of the Northern Plano Tradition reached the central Arctic Coast prior to the appearance of Eskimo cultures in the area; radiocarbon dates may be obtained from burnt bone samples associated with

Keewatin Lanceolate, Thaltheilei, and round-based Plano points. Arctic Small Tool tradition and Thule culture components were excavated at Bloody Falls but no Dorset occupation was discovered in the area surveyed.

Donald W. Clark excavated several early historic houses and recovered Norton and later materials from Norutak Lake in the Allakaket region of Alaska. In addition, he discovered traces of a new culture related to some of the oldest now known in the area. He remained in Allakaket through fall and early winter gathering data for the direct historical (or ethnographic) approach to Athabaskan prehistory.

Contract-supported work in Northern Canada included the following projects: Richard E. Morlan, University of Wisconsin, excavated Athabaskan archaeological sites in northern Yukon Territory; William B. Workman, University of Wisconsin, excavated multi-component sites near Aishihik Lake in southwest Yukon Territory; W. C. Noble, McMaster University, conducted archaeological survey and excavation in the Great Bear-Camsell River-Great Slave region of the Northwest Territories; C. F. Merbs, University of Chicago, recovered burials of Thule culture Eskimos, began test excavations of Thule culture habitation sites and prepared reports on the mainland coast of Roe's Welcome, N.W.T.; and G. Barré, Université de Montréal, carried out survey and archaeological salvage on the offshore islands on the south side of Hudson Strait, N.W.T.

Radiocarbon Program.—As of mid-October 1968, 29 radiocarbon samples received from staff and contractors had been processed and catalogued. Of the 41 samples submitted to laboratories for dating, results had been received on eight, and descriptions of these were prepared for publication in *Radiocarbon*. A manuscript, "Canadian Archaeological Radiocarbon Dates", was prepared for publication in *National Museum of Canada Contributions to Anthropology* and descriptions of samples dated by the Geological Survey of Canada were edited for publication in *Geological Survey of Canada Radiocarbon Dates VIII*.

PART II.—LAND RESOURCES, PUBLIC LANDS AND WILDLIFE

Section 1.—Land Resources

Information available regarding Canada's land resources is shown in Table 1, where the land area is classified as occupied agricultural, forest and "other" land, the last including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. The Forestry Branch of the Department of Fisheries and Forestry estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1966, less than 8 p.c. is classed as occupied farm land. A great part of the 1,599,542 sq. miles of "other" land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forest area is estimated at 275,800 sq. miles.

On the basis of information currently available, it is estimated that, in addition to the present arable land across the country, about 40,000,000 acres of virgin land can be used for arable crops if the need arises. However, most of these reserves will require clearing or other improvement measures before they can be used for agriculture. In addition to the present arable land and potentially arable land, 55,000,000 to 60,000,000 acres are suitable for wild pasture.

As the Canada Land Inventory progresses (see Sect. 4 of Chap. X), a great deal of detailed information is becoming available on the land resources of the country, their present utilization and their capability.

1.—Land Area classified as Occupied Agricultural or Forest, by Province

Note.—Figures for occupied agricultural land were obtained from the 1966 Census; areas of forest land were compiled by the Forestry Branch of the Department of Fisheries and Forestry from estimates supplied by the Forestry Service in each province.

Description	New- found- land	Prince Edward Island	Nova Scotia	New Brun- swick	Quebec	Ontario	Manitoba	Saskat- chewan	Alberta	British Columbia	Y.T. and N.W.T.	Canada

¹ Includes in *Forest Land*; duplication eliminated in the item *Net Productive Land*.

² Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions, and reserve forest lands for which no inventories are available.

³ Includes only occupied agricultural land (less forest, woodland) plus productive forest land.

⁴ Includes open muskeg, swamp and rock and also unclassified land.

⁵ *Net Productive Land* plus *Non-productive Forest Land* plus *Other Land*.

Section 2.—Federal and Provincial Public Lands

In Table 2, classifying the area of Canada by tenure, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from provincial government sources.

2.—Total Area classified by Tenure (circa) 1967

Totals.....	251,000⁹	251,700	255,285	366,255	1,511,979	3,851,809⁹

¹ Includes Gatineau Park (137.5 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. ² Less than one square mile. ³ Included in item 6.

⁴ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks. ⁵ Includes that part of Wood Buffalo Park in Alberta (13,675 sq. miles). ⁶ That part of Wood Buffalo Park in N.W.T. ⁷ This forest experiment area of 26 sq. miles is also included in National Parks figure. ⁸ Includes 1,945 sq. miles of provincial park land within provincial forest reserves. ⁹ Does not add because of duplications; see footnotes ⁷ and ⁸.

Federal Public Lands.—Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, ordnance and admiralty lands, National Parks and National Historic Parks and Sites,

forest experiment stations, experimental farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 2). These lands are administered under the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 93 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Department of Indian Affairs and Northern Development.

Provincial Public Lands.—Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 132 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVII, under "Lands and Land Settlement".)

Subsection 1.—National Parks

Canada's National Parks are the result of the Federal Government's efforts to preserve natural areas of outstanding scenic and biological interest for the benefit of the public. The national park concept, which began with the establishment of Yellowstone National Park in the United States in 1872, was soon afterwards applied in Canada. In 1885, the Canadian Government reserved from private ownership the hot mineral springs of Sulphur Mountain in what is now Banff National Park. Two years later, this 10-sq. mile reserve was extended to 200 sq. miles and named Rocky Mountain Park, the first federal park in Canada. In the same year, Queen Victoria Niagara Falls Park, the first provincial park, was established by the Ontario Government to protect the public's right to view the great natural wonder of Niagara Falls. Two land reserves in southern British Columbia—Yoho and Glacier—were established by the Federal Government in 1886, a reserve in the Waterton Lakes area of southern Alberta in 1895, and an area of 4,200 sq. miles around Jasper, Alberta, in 1907. These four reserves, all in the western mountain ranges, joined Banff as the nucleus of the National Park system when the Dominion Forest Reserves and Parks Act was passed by Parliament in 1911. The Act also provided for a distinct National Parks Branch in the Federal Government to protect, administer and develop the parks.

By 1935, nine more National Parks had been established. Three of these were in Ontario and consisted of federally owned Crown land; one in Saskatchewan and one in Manitoba were former forest reserves; Wood Buffalo National Park, straddling the Alberta-Northwest Territories border and occupying an area of 17,300 sq. miles, making it the largest national park in the world, was established as a refuge for the largest surviving herd of Buffalo in North America; Elk Island National Park near Edmonton was also established as a preserve for buffalo; and Mount Revelstoke and Kootenay National Parks, scenic areas in southern British Columbia, were established by agreement between the Federal and British Columbia Governments.

The parks added to the system since 1935 were set up with the co-operation of provincial governments which made lands available for National Park purposes. All lands suitable for National Parks are now under the administration of provincial and territorial

governments and a new National Park may be established by Act of Parliament only after the land for it has been acquired by the provincial government and transferred, together with all its resource rights, to the administration of the Federal Government.

National Parks are now under the jurisdiction of the Minister of Indian Affairs and Northern Development and the National and Historic Parks Branch and are administered under the National Parks Act enacted in 1930 (RSC 1952, c. 189) and various park regulations. The purpose of the parks and the objectives of their management are set out in that Act, which dedicates the parks to the people of Canada for their "benefit, education and enjoyment" and instructs that they are to be maintained and used so as to leave them unimpaired for the enjoyment of future generations.

An important step in the evolution of National Park administration was taken when all policies regarding the parks were reviewed and consolidated in a statement that was approved by the Government and announced in the House of Commons on Sept. 18, 1964. The main points of this policy statement, which will guide administration and provide objectives for planning and development, are:—

- (1) National Parks are established to preserve for all time the most outstanding and unique natural features of Canada for the benefit, education and enjoyment of Canadians as part of their natural heritage. They are dedicated forever to one use—to serve as sanctuaries of nature for rest, relaxation and enjoyment. No exploitation of resources for any other purpose is permitted. All development must contribute to public enjoyment and conservation of the parks in a natural condition.
- (2) Zoning will be used to guide development and to preserve park values. Visitor services will be grouped generally to visitor service centres, a definition that applies to existing townsites.
- (3) National Parks cannot meet every recreational need; the most appropriate uses are those involving enjoyment of nature and activities and experiences related to the natural scene.
- (4) The Federal Government assumes the cost of administration and protection in the parks and provides basic facilities for public use, such as roads, trails, campgrounds, picnic areas, nature interpretation and utilities. Other facilities beyond basic requirements, such as hotels, motels, restaurants, gas stations, stores and other special services, are provided by private enterprise.
- (5) Park residents and businesses should be in the same economic position as those operating outside the National Parks and this principle governs the approach to charges, rentals and fees. The users of special services such as swimming pools, marinas, golf courses and fully serviced campgrounds should pay the operation and maintenance costs of these publicly operated facilities. In general, permanent and seasonal residents should be limited to persons providing basic services to park visitors and to the park community.
- (6) All decisions affecting public development and the activities of private enterprise must be governed by the national interest as expressed by the National Parks Act.

In addition to the National Parks, which preserve natural features, National Historic Parks and Sites commemorate events of national importance and preserve historic landmarks or objects of historic, prehistoric or scientific interest, also of national importance. Hundreds of monuments or plaques commemorating personages or events have been erected across the country. A site is declared of national historical significance by the Minister of Indian Affairs and Northern Development on the recommendation of the Historic Sites and Monuments Board of Canada, an advisory board of historians representing all provinces. In late 1967, a National Historic Sites policy statement was approved by the Board, accepted by the Minister and tabled in the House of Commons for the information of Parliament. One of the main points of the policy statement recognized the need for a comprehensive long-range historic sites program, establishing proper thematic and regional priorities.

The National Parks and National Historic Parks and Sites are administered by a director, three assistant directors and three regional directors who are responsible for operations in the Western Region, the Central Region (Ontario and Quebec) and the Atlantic Region. Each regional director is advised by representatives of the staff components of the Branch—Financial and Management, Personnel, National Parks Service, National Historic Sites Service, and Engineering and Architectural. A resident superintendent

manages each park and directs a staff of park wardens who protect the park and its natural features and enforce park regulations, park naturalists who explain the park to visitors and offer various educational services, and other administrative, maintenance and visitor service personnel.

Each park is being developed to yield the recreational potential for which it is suited and sightseeing, camping, fishing, photography, hiking and nature study are the most popular recreations common to the 18 parks that are accessible to the public. There are campgrounds in each park; daily charges are \$1, \$1.50 or \$2 a day, depending on the services provided. Motor vehicles may enter parks in the Atlantic Provinces free of charge but an admission fee, varying from 25 cents for a single entry to \$2 for an annual licence good for all parks, is payable on entering all parks in Western Canada and Point Pelee National Park in Ontario; all fees are currently under review and an increase may be expected in 1969.

3.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks				
Terra Nova.....	On Bonavista Bay, Newfoundland, 205 miles north of St. John's.	1957	153.0	Rocky headlands, wooded interior areas, offshore and freshwater fishing. Serviced campground and cabin accommodation.
Prince Edward Island.	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Fine bathing beaches. Hotel and cabin accommodation. Serviced campgrounds.
Cape Breton Highlands	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coastline with mountainous background. Fine seascapes. Hotel and cabin accommodation. Serviced campgrounds.
Kejimikujik.....	Interior of southwestern Nova Scotia near Maitland Bridge.	¹	150.0	Newest National Park still at early stage of development.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Interesting rock formations on coast and rolling hills inland. Motel and cabin accommodation and campgrounds.
Georgian Bay Islands..	In Georgian Bay, 3 miles by water from Honey Harbour, Ont.	1929	5.4	Camping, canoeing, hiking, swimming, fishing and boating opportunities. Unusual geological formations on Flowerpot Island, off Tobermory on Midland Peninsula. Accessible by boat only.
Point Pelee.....	On Lake Erie near Leamington, in southwestern Ontario.	1918	6.0	Most southerly part of Canadian mainland. Fine bathing beaches. Unusual flora. Resting place for migrating birds. Campground.
St. Lawrence Islands...	In St. Lawrence River between Brockville and Kingston, Ont.	1914	260.0 (acres)	Mainland area and 14 islands with docks, campgrounds and picnic areas. Representative selection of the Thousand Islands. Islands accessible by boat only.
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Woodland escarpment with fine lakes. Fishing, swimming, trail-riding, hiking and golfing. Visitor services in Wasagaming townsite. Campgrounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Fishing, swimming, boating and golfing. Marina. Visitor services at Waskesiu townsite.

¹ Not yet formally established.

3.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
National Parks— concluded				
Banff.....	Western Alberta, on east slope of Rockies, 65 miles from Calgary.	1885	2,564.0	Best known and most popular of the National Parks. Magnificent scenery. Mineral hot springs. Resort facilities at Banff and Lake Louise. Skiing developments at Mount Norquay, Mount Whitehorn, Sunshine, Skoki and Temple. On Trans-Canada Highway.
Elk Island.....	Central Alberta, near Edmonton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular picnic and day-use area. Cabin accommodation and serviced campground.
Jasper.....	Western Alberta, on east slope of Rockies, 235 miles from Edmonton.	1907	4,200.0	Mountainous area and noted wildlife sanctuary. Majestic peaks, icefields, beautiful lakes and famous resort, Jasper. Mineral hot springs. Connected with Banff by scenic Banff-Jasper Highway. Accessible also by rail. Hotel and cabin accommodation and campgrounds.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Montana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier International Peace Park. Mountainous area with spectacular parks and beautiful lakes. Hotel, motel and cabin accommodation. Serviced and unserviced campgrounds.
Glacier.....	Southeastern British Columbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Climbing, hiking and camping. On Trans-Canada Highway. Visitor services at Rogers Pass.
Kootenay.....	Southeastern British Columbia, on west slope of Rockies.	1920	543.0	Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Mount Revelstoke.....	Southeastern British Columbia, on west slope of Selkirks.	1914	100.0	Mountain-top plateau with rolling alpine meadow and picturesque tarns.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Hotel and cabin accommodation. Serviced and unserviced campgrounds.
Wood Buffalo.....	Partly in Alberta, and partly in Northwest Territories, between Athabasca and Slave Rivers.	1922	17,300.0	Largest National Park in world. Home of largest remaining herds of plains and wood bison and nesting ground of whooping crane. Accommodation at and access by boat and aircraft from Fort Smith, N.W.T.
National Historic Parks			acres	
Signal Hill.....	St. John's, Nfld.....	1958	243.4	Site of 1762 battle between French and British and of many fortifications. Marconi made first transatlantic wireless transmission here in 1901.
Fort Amherst.....	Prince Edward Island, near Rocky Point.	¹	222.0	Remaining earthworks of British fort built after 1758.

¹ Not yet formally established.

3.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Estab- lished	Area	Characteristics
			acres	
National Historic Parks—concluded				
Fort Anne.....	Annapolis Royal, N.S....	1917	31.0	Site of French fort first built about 1635, finally captured and occupied by British in 1710. Museum and well-preserved earthworks.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1940	13,000.0	Walled town built by French 1713-58 and demolished by British 1759. Being partially reconstructed. Archaeological investigations in progress.
Halifax Citadel.....	Halifax, N.S.....	1951	20.0	Fortress constructed in 1820s and in 1850s. Museum.
Port Royal.....	Port Royal, N.S., 8 miles from Annapolis Royal.	1940	20.5	Reconstruction of "Habitation"—first fort built in 1605 by Champlain and DeMonts.
Alexander Graham Bell	Baddeck, N.S.	1	21.0	Museum containing mechanical and documentary records of research by the inventor.
Grand Pré.....	Grand Pré, N.S.....	1957	20.0	Commemorates the story of the Acadians and the New England Planters. Museum.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	93.0	Site of French fort erected in mid-1700s. Museum.
Fort Chambly.....	Chambly, Que.....	1940	2.5	Fort built by English in 1709-11. Museum.
Fort Lennox.....	Île aux Noix, Que., near St. Paul.	1940	210.0	Fort built by English in 1820s.
Fort Malden.....	Amherstburg, Ont.....	1940	10.0	Site of defence post built in 1797-99. Museums.
Fort Wellington.....	Prescott, Ont.	1940	12.0	Military garrison 1812-66.
Woodside.....	Kitchener, Ont.....	1954	12.0	Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada.
Fort Prince of Wales...	Northern Manitoba, near Churchill.	1940	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry....	Manitoba, 20 miles north of Winnipeg.	1951	13.0	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford.....	Saskatchewan, 4 miles south of North Battle- ford.	1951	36.7	North West Mounted Police post built in 1876. Museum.
Fort Langley.....	Fort Langley, B.C.	1	11.0	Partially restored trading post founded 1827. Colony of British Columbia proclaimed here 1858.
Fort Rodd Hill.....	Esquimalt, B.C.....	1962	44.4	Extensive 19th century stone and concrete coastal fortifications.
Major National Historic Sites				
George Island.....	Halifax, N.S.....	1	12.5	Preserved harbour fortifications built in 1870s.
York Redoubt.....	Halifax, N.S.....	1	187.5	Perimeter harbour defence installations in use from 1778 to 1945.
Fort Gaspereau.....	Near Port Elgin, N.B.....	1	2.0	Site of 1751 French fort.

¹ Not yet formally established.

3.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—concluded

Park	Location	Year Estab- lished	Area	Characteristics

Subsection 2.—Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

Newfoundland.—Altogether, 2,954 sq. miles of wilderness reservation and provincial parklands are administered by provincial government agencies in Newfoundland. All but 95 sq. miles of that area are contained in two wilderness reserves, which are designated as protected habitat for caribou and are administered by the Wildlife Division of the Department of Mines, Agriculture and Resources.

Of the 95 sq. miles of public parkland, 52 sq. miles are contained in two undeveloped park reservations and the remainder are in 34 provincial parks, 25 of which were open for public use in 1967 and the others were under construction. These parks are administered by the Provincial Park Service of the Department of Mines, Agriculture and Resources, and are operated for the preservation of natural environment. Most of them are located in wilderness areas and development is restricted to primitive picnic and camping areas. Park Regulations prohibit hunting and logging but sport fishing is permitted. Attendance for 1967 passed the 1,000,000-mark by mid-August, the increase for the year being estimated at nearly 40 p.c. over 1966.

Prince Edward Island.—Twenty areas have been developed as provincial parks including Strathgartney Park, a 40-acre tract of land on the Trans-Canada Highway between Charlottetown and Borden, which is an excellent picnic site and campground with its hardwood groves, fresh spring water and beautiful view over the West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park and Golf Course, comprising 296 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 18 acres at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 45 acres on the Trout River, is an attractive combination of land, trees and water and is also of interest as a historic shipbuilding centre; Cabot Park at Malpeque, named in honour of the famous explorer, John Cabot, is a 30-acre area with beautiful sandy beaches and an interesting museum; and several small parks that have been developed or are under development. A fee of \$2 is charged for serviced tent and trailer sites and of \$1.50 for unserviced sites. The parks are maintained by the Department of Tourist Development.

Nova Scotia.—A provincial park system is being developed in Nova Scotia by the Department of Lands and Forests, which will include a network of picnic parks accessible from major highways for day-use only, and a series of camping parks to provide for overnight visitors. The need also is recognized for acquisition and development of provincial beaches, particularly along the warm waters of Northumberland Strait.

Basic policy adopted by the Department includes the provision of good basic facilities, leaving scope for private enterprise to offer more sophisticated items such as showers, etc. A fee of \$1.50 nightly is charged in camping parks but there is no entrance fee or charge in the picnic parks. Concessions are not permitted under present policy.

It is visualized that some 20 to 25 camping parks and 60 picnic parks will be required in the immediate future, in addition to beach developments. Apart from 1967, a steady and quite pronounced increase in visitation has been evident.

Among the major camping parks developed to date are Whycocomagh Park overlooking Bras d'Or Lake in Cape Breton; Laurie and Porter's Lake Parks near Halifax; Caribou Park on Northumberland Strait; Wentworth Park in the Wentworth Valley; Smiley Park in the Annapolis Valley and Islands Park on the south shore. Two new parks will be open in 1969—Ellenwood Lake Park near Yarmouth and Mira River Park between Sydney and Louisbourg—and work is progressing on five additional camping parks at various locations in the province.

New Brunswick.—The New Brunswick provincial park system, which is administered by the Department of Natural Resources, includes 17 recreational parks ranging in size from 25 to 200 acres, 28 picnic parks, 12 camping parks and five beach parks. Most of the park sites are located in rural areas, fairly evenly distributed throughout the province, and are adjacent to or easily accessible from main trunk roads. All parks contain tables, some form of toilet facility and a potable water supply but more elaborate facilities are available in the larger parks. No entrance fee is charged at any of the sites but a daily camping fee of \$1.50 to \$2 is in effect at 21 of the larger parks. In addition to the above, the Department maintains two wildlife parks—at Magnetic Hill near Moncton and at McGraw Brook on Highway 109—where various species of wildlife to be found in the province are displayed.

In 1967, more than 1,616,000 persons visited the provincial parks, 145,000 of them campers; 75 p.c. of the campers using park sites come from outside the province and about 40 p.c. of the day-use visitors are non-residents.

A five-year ARDA program of expansion and improvement of park and campground facilities is under way in the province, which includes the development of approximately

1,000 tent and trailer sites, accommodation for day-use of beaches, forest and wildlife recreation areas, scenic lookouts, etc., land purchase and provision of special facilities where warranted by intensity of use, such as boats, ramps, docks, canteens and playgrounds.

Quebec.—The Province of Quebec has seven provincial parks and 12 fish and game reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,953 sq. miles; Laurentide Park, 30 miles north of Quebec City, has 3,613 sq. miles; Mont Tremblant Park, 80 miles north of Montreal, 920 sq. miles; and Gaspésian Park, in the Gaspé Peninsula, 514 sq. miles. Mont Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles and Oka Park, near Oka, 1.5 sq. miles. Newest addition to the provincial parks is the St. Maurice Park, a 131-sq. mile area north of Shawinigan in Champlain County.

Fish and Game Reserves together occupy over 43,000 sq. miles. The Chibougamau Reserve, the Mistassini Reserve and the Assinica Reserve, all northwest of Lake St. John, have areas of 3,400, 5,200 and 3,850 sq. miles, respectively, and farther north is the James Bay Reserve with an area of 25,000 sq. miles. The Aiguebelle Reserve in Abitibi County has an area of 100 sq. miles, the Baie Comeau and Chicoutimi Reserves in the Lake St. John area, 480 and 678 sq. miles, respectively, and the Kipawa Reserve in Témiscamingue County, 3,090 sq. miles. Adjoining Gaspésian Park are the Chic-Chocs and Matane Reserves with areas of 325 sq. miles and 500 sq. miles, and in Rimouski County is the Horton Reserve with an area of 310 sq. miles; this is the only reserve operated for hunting as well as for fishing.

These parks and reserves are wilderness areas of great scenic interest and are for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mont Orford Park and Oka Park, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant Park, located close to a famous year-round recreational area, is easily reached in summer by highway from Montreal and is very popular for tent or trailer camping and for swimming and picnicking. Mont Orford has an 18-hole golf course and, in winter, is the rendezvous of Canadian and United States skiers and the site of the Canadian Alpine downhill and slalom championship competitions. Hunting is forbidden in all parks and reserves except Horton, Kipawa and James Bay. In recent years, controlled moose hunting in Laurentide, La Vérendrye and Matane Parks has been allowed to remove the surplus population.

Salmon fishing is available in the Gaspé area where the government maintains facilities for anglers along the Port Daniel, St. Jean, Cap-Chat, Matane, Matapédia and Petite Cascapédia Rivers. Facilities are also provided along the estuary of the Moisie River on the north shore of the St. Lawrence River about 15 miles east of Sept Îles, as well as at Petit Saguenay and Laval.

The ever-increasing popularity of camping in Quebec has prompted the Department's Park Service to establish camping facilities. Twenty areas are now well organized for this purpose—Val Jalbert, one mile east of Roberval in Lake St. John County; Grand Métis, six miles from Mont Joli, and Cap Bon Ami, both in the Gaspé Peninsula: Batiscan, on Highway 2, 25 miles east of Trois-Rivières; St. Jean, Île d'Orléans, Stoneham, Ville-neuve and Beaumont in the vicinity of Quebec City; des Voltigeurs, Waterloo and Mont Orford in the Eastern Townships; Brossard, Laprairie, Côte Ste. Catherine, Pointe-aux-Cascades and Oka close to Montreal; and Soulanges, St. Zotique and Rivière-Beaudette near Valleyfield.

Ontario.—In 1968 there were 95 provincial parks available for public use in Ontario and several new parks were in process of development; 66 other areas, encompassing 1,619 sq. miles, were acquired for future development. The total area of the Ontario provincial park system was about 13,144 sq. miles.

The seven largest parks—Polar Bear, Algonquin, Quetico, Lake Superior, Missinaibi, Killarney and Sibley—together have an area of about 12,724 sq. miles. Polar Bear Park is the largest in the system, occupying 7,000 sq. miles of Hudson Bay Lowland bordering Hudson and James Bays containing boreal forest, tundra and arctic flora and fauna. Algonquin Park is a beautiful area 2,910 sq. miles in extent, 180 miles north of Toronto and 105 miles west of Ottawa; it has 14 picnic and campgrounds which are accessible by car from Highway 60 and offers particularly fine canoeing opportunities in its interior. Killarney Park is accessible by Highway 637 from Highway 69 south of Sudbury. Quetico Park, covering 1,750 sq. miles, is accessible by Highway 11 at the Dawson Trail Campground on French Lake and also by water by way of Basswood Lake in the south. Highway 17 north from Sault Ste. Marie gives access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur. Missinaibi Park, 176 sq. miles in extent, surrounds Missinaibi Lake, 55 miles north of Chapleau. The lake is renowned for walleye fishing and is the site of an important Hudson Bay Trading Post.

In 1967 a new policy of park classification and parkland zoning was announced to achieve a balanced park system and to establish a framework for positive and effective development and management. Five park classes were established—primitive, natural environment or heritage, wild river, nature reserve, and recreation. Comparable zones within parks were also established—primitive, natural, historic, multiple use, and recreation.

Under the Wilderness Areas Act, which came into effect in 1959, 45 areas have been established. These areas, widely distributed across the province, vary in size, character and significance but all are regarded as important for their historic, scientific, aesthetic or cultural values. The largest is a 938-sq. mile block covering the Pukaskwa area on the north shore of Lake Superior. Most other wilderness areas are one square mile or less in size.

Ontario has made another advance in meeting the rising pressures for recreational space by applying the concept of the recreational reserve. The recently created North Georgian Bay Recreational Reserve covers 4,500 sq. miles of interesting country lying generally between Algoma and Parry Sound on the north shore of Georgian Bay and including the channel between Manitoulin Island and the mainland, the 30,000 Islands, the famous route of the voyageurs by way of the French River, the remaining shoreline of Lake Nipissing and the LaCloche Mountains. The Reserve is not a provincial park nor is it a Wilderness Area but an area following a normal course of development which is already used extensively for recreation. The plan is, by guiding the evolution of the area, to realize its full potential as a recreational paradise serving all types of needs and co-existing with a landscape of normal activity.

Ontario's vast lakeland areas make this province a vacation paradise and the number of park visitors increases year by year. Attendance in 1967 was 10,192,533 persons and campers numbered 1,155,091. The charge for vehicle entry in 1968 was \$1 a day or \$10 a year, and the camping charge was \$2.50 a night which included vehicle entry. Picnic tables, fireplaces, fuelwood, tested drinking water and washrooms are provided at supervised tent and trailer campgrounds. Trailer sanitation stations are new additions in many parks. Campsites numbered approximately 16,200 in 1967.

Interpretative and naturalist programs are being continually expanded and such services as museums, outdoor exhibits, conducted trips, illustrated talks and labelled nature trails were available in 34 parks in 1967.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests. Detailed information is contained in various brochures available on request from the Department of Lands and Forests, Parliament Buildings, Toronto.

Manitoba.—The provincial park system of Manitoba, administered by the Parks Branch of the Department of Tourism and Recreation, consists of four major classifications of outdoor recreation development: provincial parks, which are large-area parks with a variety of natural attractions suited to many outdoor activities; recreation areas, the

natural attractions of which are modified to accommodate recreational activities of an intensive nature; waysides, or highway wayside parks which enhance travel routes and provide attractive rest stops; and heritage areas, which are areas of outstanding scenic beauty or have natural, physical or historic features of special provincial interest.

There are nine provincial parks in Manitoba. In addition to six established parks, three Centennial parks are under development. Birds Hill Provincial Park, near Winnipeg, comprises an 8,400-acre playground and an 80-acre man-made lake within easy reach of the Manitoba capital. In south-central Manitoba, Spruce Woods Provincial Park is set in an area thriving with wildlife, forest and wildflowers along the valley of the Assiniboine River, and also featuring lookouts over the shifting sand dunes of the Bald Head Hills, the province's only truly desert area. Near the western boundary of the province, Assinippi Provincial Park is under development. It centres on the southern end of a 45-mile-long man-made lake now forming behind the Shellmouth Dam on the Assiniboine. The Shellmouth reservoir will provide for development of water-based facilities on a large scale for western Manitoba residents and visitors.

Manitoba provincial parks have a total area of 2,858 sq. miles, of which 1,945 sq. miles are within provincial forests. In addition, there are 41 recreation areas ranging in size from 2.5 acres to 2,000 acres, and 81 roadside parks. Most of the recreation areas offer swimming, camping and picnicking facilities, and 48 of the roadside parks contain public campgrounds. Hunting and fishing lodges are common and accommodation in some of the parks ranges from modern resorts and motels to hotels and cabins. Golf, tennis, boating, swimming, fishing, riding and hiking facilities are available, as well as children's playgrounds. A major ski area and mazes of power toboggan trails provide for growing participation in wintertime outdoor activities. About 115 commercial concessions operate within the parks system, offering a variety of services ranging from restaurants to riding stables and boat marinas.

Rehabilitation and expansion of existing recreation areas is continuing in an effort to provide new camping and improved day-use facilities. Development is continuing, too, in the heritage area program to preserve and interpret sites, large and small, illustrating the natural and human history of the province. Surveys have been conducted to study potentials along the shorelines of Lake Winnipeg and Lake Manitoba and provide guidance for future development of recreational facilities in Manitoba's interlake area.

Popularity of the Manitoba Provincial Parks and recreation areas is marked by impressive annual increases in the numbers of park visitors. In the year ended Mar. 31, 1967, the number of park visitors was estimated at 1,800,000. An estimated 52,000 families and groups in tents, trailers, and truck campers utilized campground facilities across the province. The admission fee to Manitoba's provincial parks is 50 cents a day or \$3 for the season.

Saskatchewan.—Saskatchewan's 14 provincial parks, comprising 1,803 sq. miles of recreation land, range from forested parklands in the midst of the sprawling prairie to valley parks between the soft hillsides of the legendary Qu'Appelle and rugged northernland settings. Each park offers camping, picnicking, boating and swimming facilities and a variety of recreational activities. Eleven of the parks operate a supervised recreation program of regularly scheduled activities for all ages—arts and crafts, hikes along park nature trails, social functions and numerous team sports. Moose Mountain boasts a dignified split-fieldstone chalet and other modern cabin accommodation. Modern cabin facilities are also found at Cypress Hills, Duck Mountain and Greenwater Parks. In Cypress Hills Park, with its unique forest cover of stately lodgepole pine and white spruce, are found elk, antelope, deer, beaver, sharp-tailed grouse and quiet trout-stocked streams. In Duck Mountain, Moose Mountain and Greenwater Parks, moose, elk and bear appear variously and deer and beaver are common to all, as are several varieties of grouse and many species of water and smaller land birds. Golf courses are found at Cypress Hills, Moose Mountain, Duck Mountain and Katapwa Parks. Pike, pickerel and perch abound in almost all park lakes and brook and rainbow trout are ardently sought in northern waters.

Canoe routes and commercially operated fishing and hunting camps are found in the province's three wilderness parks—La Ronge, Nipawin and Meadow Lake. Hundreds of roadside camp and picnic grounds are in operation. Four official Trans-Canada Highway Campsites and several other camping areas dot the province's 406-mile stretch of Trans-Canada Highway. Here campers and picnickers relax in picturesque settings, contrasting the flat prairie highway. Saskatchewan operates 68 regional parks which, although designed primarily with local patrons in mind, also attract large numbers of tourists.

Marked sites of historic interest number 143 and include the Touchwood Hills Hudson's Bay Post, Cannington Manor and Wood Mountain Historic Parks.

Alberta.—In Alberta, 47 provincial parks have been established, 44 of which, with a total area of approximately 172 sq. miles, are in use and continuing development. Cypress Hills Provincial Park with an area of 78 sq. miles is the largest and is situated in the southeast portion of the province. Other parks are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Knife, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Entrance, Garner Lake, Gooseberry Lake, Hommy, Jarvis Bay, Kinbrook Island, Lac Cardinal, Lesser Slave Lake, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, Moose Lake, O'Brien, Park Lake, Pembina River, Pigeon Lake, Red Lodge, Rochon Sands, Saskatoon Island, Sir Winston Churchill, Taber, Thunder Lake, The Vermilion, Tillebrook Trans-Canada Campsite, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford, Writing-on-Stone. These parks are generally provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. There is a park within easy reach of almost every town. The most northerly park is Lac Cardinal, about 28 miles southwest of Peace River, and the southernmost park is Writing-on-Stone which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by 4,081,452 tourists and vacationists in 1967.

In addition to the recreational parks, 24 sites have been established to mark and preserve locations of historic interest. They include: Athabasca Landing, Buckingham House, Bugnet Plantation, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Hay Lakes Telegraph Station, Massacre Butte, Ribstones, Rocky Mountain House Fort, Standoff, Stephansson, Twelve Foot Davis, Shaw Woolen Mill, Rev. George McDougall's Death Site, Fort McLeod, Indian Stone Pile, St. Joseph Industrial School and Old Women's Buffalo Jump.

Provided also for Albertans are the Willmore Wilderness Provincial Park, which adjoins Jasper National Park in the north and extends along the British Columbia border, and two wilderness areas established under the Forest Reserves Act in 1961. Willmore Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles and White Goat Wilderness 489 sq. miles. The Ghost River Wilderness area of 59 sq. miles was established under the Provincial Parks Act in 1967. The wilderness areas have been set aside to preserve as far as possible the natural scene and are not subject to any development or provided with roads.

British Columbia.—There are 260 (170 developed) provincial parks in British Columbia, having a total area of about 10,038 sq. miles. These parks are classified as A, B and C. Class A parks are intended to preserve outstanding natural, scenic and historic features of the province for public recreation; they have a high degree of legislative protection against exploitation and alienation. Class B parks are also primarily for the protection of natural attractions but other resource use may be permitted if it does not unduly impair recreational values. Class C parks are intended primarily for the use of local residents and are generally managed by local park boards. Nature Conservancy Areas in any park are fully protected from resource development and are dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park and outstanding scenic and mountain reserves such as Garibaldi,

Mount Robson, Manning and Bowron Lakes Parks. The formal gardens of Peace Arch Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with tourists; the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored and became the first Provincial Historic Park; Fort Steele in the East Kootenay area is also being restored to preserve another of British Columbia's pioneer settlements. Twelve marine parks with mooring facilities and campsites have been developed on the islands of the Strait of Georgia for the benefit of water-borne vacationers.

The popularity of British Columbia's parks, with their integrated campsites and picnic areas, is attested by the fact that about 6,105,000 park visits were recorded during 1967; about 25 p.c. of the visitors were campers and the remainder day visitors. Records show that Mount Seymour, Cultus Lake and Golden Ears Parks were the most heavily used.

Subsection 3.—Ottawa, Canada's National Capital*

Canada's capital city lies in a magnificent natural setting, its hub high on the limestone bluffs bordering the Ottawa River where it tumbles over the Chaudière Falls and where, a short distance downstream, the lazy Rideau River falls in twin curtains over the cliffs from the south and the once-turbulent Gatineau River flows in from the north. Here Champlain paused and portaged on his way westward in 1613. The priests, soldiers and traders who followed him travelled past these cliffs and around the rapids. By this place passed most of the great overland explorers. Champlain called the river "la grande rivière des Algoumequins" and early English traders called it the Grand River. "Ottawa" is the anglicized form of Outaouac or Outaouais, the name of a tribe of Indians from Lake Huron who traded with the French in the seventeenth century. They carried their furs by the river that now bears their name. The first settlement in this region is associated with an American from Massachusetts, Philemon Wright, who, in 1800, located on the north shore of the river where Hull stands today, bringing with him families and tradesmen and forming the nucleus of a busy community. Taking advantage of Britain's need for squared timber, Philemon Wright ran the first raft of white pine to Quebec in 1806, and started the Ottawa River squared timber trade that soon came to be fostered by British tariff concessions. This was the beginning of a great industry that remained the life blood of the community for half a century.

Settlement on the south side of the river did not begin in earnest until a generation later. During the War of 1812 communications by the St. Lawrence River, the main route to the settled area in Upper Canada, had been under American attack and a safer water route between Montreal and the Great Lakes was considered an urgent need for the future. Ten years were spent in sporadic investigation and consideration of a route by the Rideau and Cataraqui River systems and finally, in 1826, Lieutenant-Colonel John By of the Royal Engineers was sent to the Chaudière to build a canal from that point to Kingston. The next year two companies of Royal Sappers and Miners, numbering 162 men, began the construction. To Colonel By also goes the credit of planning the original townsite which was, in 1827, named Bytown in his honour. Where Ottawa's central area is today, the Earl of Dalhousie, the then Governor-in-Chief, had wisely secured commanding ground for the Crown in 1823 and, adjacent to this, Colonel By laid out two settlements called Upper Town and Lower Town, separated by part of the Government lands called Barrack Hill. The canal was finished in 1832 and the town that sprouted around Colonel By's military camp began to grow and prosper. Stores and banks were set up, churches and schools were built and a little manufacturing community was started in New Edinburgh near Rideau Falls.

Bytown was now the inland centre of the squared timber trade and by 1850 could boast of some fine stone buildings, among them the home of Thomas MacKay which

* Revised by the Public Relations Division, National Capital Commission, Ottawa.

today forms the central part of the residence of the Governor General of Canada. A change then occurred in the timber industry, the British system of preferential import duties on squared white and red pine logs was abandoned and trade began to decline. However, by this time the accessible forest stands of the eastern United States were depleted and sawn lumber was needed to house a growing population. Also, the American railway and canal network had extended to the Canadian border, making transportation easy. Encouraged by these favourable conditions and the newly recognized availability of hydro-electric power, a group of American and other lumbermen came to Bytown, beginning in 1853, and established sawmills by the Chaudière Falls. Soon the islands about the falls and the flats on both shores were covered with lumber piles and loaded barges were on their way to the American market. The sawmill industry began its rise to dominating importance.

At the beginning of 1855, Bytown became a city and took the name Ottawa, just in time to receive a great honour and to assume a great responsibility. The United Province of Canada, since its formation in 1841, had shuttled its capital between Kingston, Toronto, Montreal and Quebec and was now trying to agree on a permanent site. At the end of 1857 Queen Victoria settled the dispute by choosing Ottawa. Government buildings for the new capital were designed and contracts were let in 1859 for their construction. However, the task was hard and the cost much greater than expected and it was not until 1866 that the government of the Province of Canada actually moved to Ottawa. The next year the first Parliament of the new Dominion of Canada met in an incomplete Parliament Building, situated on the former Barrack Hill.

The nation enjoyed a brief prosperity during most of the next decade. Ottawa grew and the government expanded as the Dominion extended its authority over more and more of British North America. In 1871, shortly after Confederation, the city had a population of about 22,000. Many fine homes and stores in stone and brick were built. The Departmental Buildings, flanking the Parliament Building on the Hill, were enlarged. An old wooden City Hall near the Canal was replaced in 1876 by a fine stone building and a large post office was erected at the city's centre. By the end of the nineteenth century, Ottawa was a flourishing industrial centre with a population of 59,000. It remained the hub of the lumbering industry of Eastern Canada, had the largest paper mills in the country and the leading match factory in the world. However, little effort had been made to preserve or enhance its natural beauty until the Ottawa Improvement Commission was set up in 1899 and the Driveway along the Rideau Canal was begun. Even so, progress was slow in this direction, but in the years up to the beginning of the First World War the city centre began to take on a new face. Many new government buildings were erected—laboratories, the Dominion Observatory and the Geodetic Building at the Experimental Farm, the Archives Building, the Victoria Memorial Museum, the Royal Canadian Mint and the Connaught Building. In 1912, the Grand Trunk Railway completed construction of the Union Station and of the French renaissance-style Chateau Laurier whose turrets continue to grace the Ottawa skyline. During this period several studies were made and plans recommended for the improvement of the national capital but these were deferred because of the War and for other reasons. Fire destroyed the Parliament Building in 1916, leaving standing only the octagonal library now forming part of the magnificent building of modern Gothic architecture which replaced it but was ten years in the building. The city beautification program was continued by the Ottawa Improvement Commission on a slightly increased budget until 1927; in that year the Commission was reconstituted as the Federal District Commission and the program then proceeded at a more accelerated rate. The second Commission was succeeded in 1959 by the National Capital Commission.

The City of Ottawa today, with its population of close to 300,000, is well on the way to becoming a national capital of enduring beauty and grace. It is a self-governing municipality, administered by an elected City Council, but there are underlying differences which set it apart from all other major Canadian centres. Historically, it has always been the meeting place for the two founding peoples. It is the national seat of Govern-

ment and throughout the years the federal authorities have recognized the need of creating in and around the national capital an area of pride, not only for the residents of the city and its environs but for all Canadians.

Much of the work of the National Capital Commission hinges on the implementation of a long-range Master Plan, developed by the late Jacques Gréber, a famed French town-planner. The Gréber Plan tabled in the House of Commons in 1951, although not officially recognized by the Provinces of Quebec and Ontario, is the basis of much that has been accomplished. In fact, ten years after its publication it was reported that all of its major proposals were in process of realization.

Success of the Plan, now and in the future, is dependent on co-operation between the Federal Government, the governments of the Provinces of Ontario and Quebec, the cities of Ottawa, Hull and Vanier City and about sixty-five other autonomous municipalities in the National Capital Region. The Plan itself was conceived as a memorial to all Canadians who gave their lives in the defence of Canada during the Second World War and was projected over a fifty-year period. It called first for the establishment of a National Capital Region encompassing some 900 sq. miles but later, in 1959, this was doubled to 1,800 sq. miles—about half in Ontario and half in Quebec. In accordance with its proposals, large "open spaces" are being provided in the Ottawa-Hull area, part of which involves the restoration of the shores of the waterways. Major restorations have taken place at Rideau Falls opposite the Ottawa City Hall, at Jacques Cartier Park in Hull, and at Vincent Massey Park which is a 75-acre urban park in the heart of Ottawa, linked with the 50-acre Hog's Back Park surrounding the limestone chasm of Prince of Wales Falls on the Rideau River. In the City of Hull, the Commission has also developed Brébeuf Park on the Ottawa River and Leamy Lake Park on the shore of the Gatineau River. Forty miles of riverfront land are under the control of the Commission and countless delightful areas are accessible to the public. There are more than 60 miles of wide, landscaped driveways throughout Ottawa and environs which will be extended by another 90 miles in coming years. In addition the Commission maintains seven city-owned parks in Ottawa, including Rockcliffe and Strathcona Parks. At present Ottawa has 4,000 acres of open space.

The relocation of government buildings to suitable scattered sites has been under way for several years. The first development took place at Tunney's Pasture located on the Ottawa River in the west-central area of Ottawa. The Pasture now contains 18 buildings of various sizes. Confederation Heights, in the south-central area adjoining Hog's Back Park, now contains six attractive and functional buildings that house Government Departments, and the large Government Printing Bureau was established in Hull. In all, the grounds of more than 140 government buildings are cared for by the Commission.

Two key proposals in the Master Plan with long-range effects on Ottawa's future are the creation of the Greenbelt and the removal of railway trackage from the central sections. The Greenbelt, designed to control urban sprawl and to provide sites for governmental, industrial and research development, is a unique planning measure in North America. Within its 41,500 acres the Commission encourages agriculture, reforestation, public recreation areas and various other governmental and private sector uses.

Railway relocation, certainly the most important element of the National Capital Plan, has been largely completed. It involved removal of 32 miles of track, much of it in the central sections of the city, elimination of 72 level crossings, many in high density urbanized areas, and is a prime consideration in Federal Government redevelopment of LeBreton Flats, the old Union Station sector in downtown Ottawa which was redeveloped for the Centennial celebrations, and sections of Sussex Drive near the approaches of the Macdonald-Cartier Bridge linking Ottawa and Hull.

The National Capital Commission opened two beautiful new parkways in Ottawa in time for the Centennial of Confederation—Colonel By Drive, extending about four and a half miles from Hog's Back to Rideau Street, and the Ottawa River Parkway, an eight-mile drive with sweeping curves from about Britannia to Wellington Street near the Garden of the Provinces.

North of Ottawa and Hull, in Quebec, an 88,000-acre recreation area known as Gatineau Park has been developed by the Commission. It is a wilderness area, extending northward from Hull for 35 miles. With 25 miles of parkway, magnificent lookouts, lakes, fishing streams, beaches, picnic areas, camping sites and walking trails, the park is one of the finest recreation areas in Canada. It is enjoyed by more than 1,000,000 visitors each year.

As part of its program of development, the Commission is engaged in regional planning, encompassing both long-range and short-term programs throughout the 1,800-sq. mile Region. It gives advisory aid to municipalities on request, and is empowered to give financial aid in special circumstances.

The Commission has 20 members, representing all the provinces, and employs between 600 and 800 people, depending on season, in carrying out its development and maintenance programs. It reports to Parliament through the Minister of Fisheries and Forestry.

Section 3.—Wildlife Resources and Conservation*

Wildlife in Canada is an important renewable natural resource. In the early days wildlife was, and in remote areas still is, a form of sustenance in the hinterland, and trade in fur determined the course of exploration and settlement. During the period of the opening up of the country, a number of mammals and birds became seriously depleted or extinct. The passenger pigeon, the great auk and the Labrador duck became extinct, the buffalo vanished from the prairies, and elk, prong-horn antelope, and muskoxen were reduced to small fractions of their former numbers. Wildlife habitat has been reduced by the cutting and burning of the forests, the pollution of streams, industrial and urban development, drainage of wetlands, building of dams, and other changes in the land.

Wildlife has been changed and influenced by man to the degree that he has changed and influenced the environment for wildlife. The arctic and alpine tundra, one of Canada's major vegetational regions, has been changed hardly at all; the adjacent subarctic and subalpine non-commercial forests have been changed principally as a result of increased human travel causing more forest fires; the great forest farther south has not lost its real character through being managed for commercial use; cultivable lands, whether originally forest or grassland, have completely changed but often they and the managed forest are better for some forms of wildlife than the original wilderness. There are more moose, deer, ruffed grouse and probably more coyotes than in Indian days. Fur species, such as beaver and muskrat, are easily managed and many small mammals and birds thrive better in fields and woodlots than in the virgin forests, provided that they are not poisoned by pesticides. At the present time, the harvestable surplus of game and fur species across Canada is seldom fully utilized and it is quite clear that wildlife will remain abundant wherever there is suitable habitat and enlightened management.

Thus, Canada today is known throughout the world for the wealth and variety of its wildlife. It maintains most or all the existing stocks of woodland caribou, mountain sheep, wolves, grizzly bears and wolverines, to mention a few. And these animals exist not only because of the vastness of their habitat but also because of man's efforts to preserve them. There is evidence of concern about the preservation of wildlife by the early Canadians; there were game laws in force in the original provinces when all but a few thousand acres of land were still the patrimony of the Indians. In 1885 pioneer conservationists were instrumental in establishing Banff Park in Alberta, and in 1887 a bird sanctuary, the first on the Continent, was established at Last Mountain Lake in Saskatchewan. Concern to preserve Canada's wildlife heritage led to the complete protection of wood bison in 1893 and to the purchase and establishment of a nucleus herd of plains bison at Wainwright in Alberta in 1907. Thus was formed the basis of wildlife conservation efforts, which, for a long time, took the form of protection of certain species from destruction by man or predator. Better knowledge of nature's operations and recognition that many factors combine

* The 1968 Year Book contains a special article on "Animal Life in Canada Today", prepared by scientists of the Zoology Division, National Museums of Canada, under the direction of E. L. Bousfield, Chief Zoologist.

to cause fluctuation in wildlife numbers are now being reflected in scientifically based hunting seasons and limits. The science of animal numbers is new and sometimes runs counter to popular prejudice but it is well understood that any area will support only so many animals, and species that are highly productive must have a quick turnover. Consideration of wildlife must never be separated from consideration of its environment and if the environment is fully stocked the annual increment need only replace the losses. All extra is surplus, only part of which is taken by predators and part, if the animal is a game species, by man.

As a natural resource, wildlife within the provinces comes under the jurisdiction of the respective provincial governments.* Wildlife on federal lands and certain problems of national or international interest with respect to research and management are the concern of the Federal Government and are dealt with mainly by the Canadian Wildlife Service as described under the next heading.

The Canadian Wildlife Service.—The Canadian Wildlife Service deals with most wildlife problems within the jurisdiction of the Federal Government. Organized in 1947 to meet the growing need for scientific research in wildlife management, it is now a Branch of the Department of Indian Affairs and Northern Development. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and the National Parks, advises the agencies concerned with wildlife management and co-operates in the application of such advice. It administers the Migratory Birds Convention Act and provides co-ordination and advice for the administration of the Game Export Act in the provinces. The Service also deals with national and international problems relating to wildlife resources and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. The Canadian Wildlife Service is responsible for recommending the annual revision of the Migratory Birds Regulations, which govern open seasons, bag limits and hunting practices for migratory game birds. The Act and Regulations are enforced by the Royal Canadian Mounted Police and, in both administration and enforcement, co-operation is received from provincial authorities. There are 95 migratory bird sanctuaries in Canada, having a total area of 44,942 sq. miles. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada, as well as in the United States.

A national wildlife policy and program was tabled in the House of Commons in 1966 after comprehensive discussions with the provinces and citizens' conservation organizations. This policy provides for research and management in which there will be co-operation with the provinces on common problems, and it establishes guidelines and goals for federal research programs.

The population of barren-ground caribou, which had been seriously declining, showed an encouraging increase in 1967, when a range-wide survey counted 357,000 animals. In April 1966, the Service began an intensive study of herds in the Keewatin and northern Manitoba to provide data for management. Major studies of wolf-caribou relationships and of the Arctic fox were completed, and others are continuing. Research is also being done on mink, muskrat, beaver and polar and grizzly bear. Big game mammals in the National Parks are under continued study, special attention being given to mountain sheep and elk in the mountain parks. Ecological studies are receiving more emphasis, particularly those of areas where developments might disturb the habitat of wildlife. In Wood Buffalo National Park, problems of disease and low reproductive rates among bison

* The conservation of wild fur-bearing animals in the different provinces is discussed in the Fisheries and Furs Chapter, Part II, and information on provincial conservation of fisheries resources is given in Part I of the same Chapter, together with data relating to the work of the Fisheries Research Board of Canada and to international fisheries conservation (see Index).

Concern for the disappearance of habitat for waterfowl has prompted the Federal Government to purchase or lease large tracts of wetlands so that they may be left in their natural state and serve as breeding grounds for these migrants.

have been investigated. Studies of the relationships between forests and wildlife in New Brunswick are continuing.

The loss of wetlands to drainage and filling for agricultural and other purposes poses a serious threat to waterfowl. The Service is participating with the provinces in a major program of preserving wetlands by purchase and long-term lease. A program to preserve about 4,000,000 acres of wetlands began during 1967 and at the end of March 1968 approximately 20,000 acres had been purchased at a cost of over \$1,000,000 and leases had been taken for 28,000 acres at a cost of \$167,000. The annual cost for leasing important wetlands will rise to \$5,000,000 during the next 10 years.

Much time has been devoted to species greatly reduced in number or in danger of extinction, such as the Ipswich sparrow, the trumpeter swan and the whooping crane. Six eggs of the whooping crane were taken from Wood Buffalo National Park in 1967 and 10 in 1968 to provide the nucleus of a captive breeding population. Eleven progeny from these eggs are being reared and the young will be released into the wild when a sufficiently large supply of breeding birds has been developed.

An annual mail questionnaire survey of a sample of waterfowl hunters, based on names of purchasers of the Canada migratory game bird hunting permit which was first sold in 1966, provides estimates of the size of the harvest and where it is taken. Another annual survey provides estimates of the species and age composition of the major game species. During the 1967-68 waterfowl seasons about 385,000 hunters purchased permits and harvested 3,500,000 game ducks, other than sea ducks, as well as lesser numbers of many other migratory game birds. Other continuing programs include an annual survey of crop

Wildlife Services specialists tag a polar bear so that his movements on the sea ice may be traced. Polar bear studies are part of the assessment of wildlife population in the Northwest Territories to further their conservation and management.

damage in the prairie provinces, annual surveys of waterfowl populations and habitat conditions in Western Canada, bird-banding, and participation in a program to reduce bird hazards at airports. Substitutes for lead shot are being studied in order to eliminate the large annual loss of waterfowl from lead poisoning. Pesticide research aims at measuring effects on wild animals of the environmental contamination by toxic chemicals; populations of fish, small mammals, songbirds, raptors and aquatic birds are at present under study.

Subjects of research in limnology include productivity of National Park waters and the biology of fish and associated fauna. Adequate stocks of fish are maintained through modern methods of management, where they can be applied without detriment to the aesthetic values of the areas concerned.

The Service research staff totals about 70. Specialists covering mammalogy, limnology, migratory bird populations, migratory bird habitat, ARDA programs, pesticides, pathology and biometrics are stationed at the head office in Ottawa. Offices are located in Fort Smith and Inuvik, N.W.T.; Whitehorse, Y.T.; Vancouver, B.C.; Edmonton and Calgary, Alta.; Saskatoon, Sask.; Winnipeg, Man.; Ottawa and Aurora, Ont.; Quebec City, Que.; Fredericton and Sackville, N.B.; Halifax, N.S.; and St. John's, Nfld. Headquarters for the Western Region is in Edmonton and for the Eastern Region in Ottawa. Sixteen officers are engaged in an inventory of wildlife land capability under the ARDA program (see Chapter X). A number of university graduates and undergraduates are engaged annually to assist in summer field work; 16 scholarships of \$1,200 were awarded in 1967 to graduate students in wildlife and allied fields.

PART III.—CLIMATE AND TIME ZONES*

Section 1.—Climate

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

* Sections 1 and 2 of this part were prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on The Climate of Canada, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data. A special article on The Climate of the Canadian Arctic appears in the 1967 Year Book at pp. 55-74, an augmented reprint of which is also available from the Meteorological Branch.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1931 to 1960 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one hundredth of an inch of rain or one tenth of an inch of snow has fallen.

¹ Total rainfall and one tenth of the total snowfall.

Section 2.—Meteorological Observing Stations

In January 1968, official meteorological observations were taken and recorded at 2,392 weather reporting stations in Canada. There are several different classes of stations ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative observing stations where a volunteer observer makes daily observations of rainfall, snowfall and temperature or precipitation only. While there are vast areas of the country where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

At most of the 283 first-order synoptic stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript reports are sent by mail to Meteorological Branch Headquarters for use in compiling climatic statistics. At 99 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 24 stations are operated in a similar manner by the different Armed Services; 93 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, or by co-operative arrangement with various transportation and communications companies.

Twice daily, at 34 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving stations; winds are determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 30 locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

There are 1,493 weather observing stations in Canada classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of the observers serve on a voluntary basis and willingly spend several hours a month on their hobby. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

There are 501 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are 114 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the number of weather stations in Canada has been growing at an average rate of more than 100 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

Trained observers from the Meteorological Branch of the Department of Transport, flying high in specially equipped long-range aircraft, plot the extent and density of winter ice over Canada's eastern coastal waters. Deepsea merchantmen and large and small fishing craft benefit from the continuing and precise recording of ever-changing ice conditions, the study of which leads to increased periods of winter navigation in greater safety.

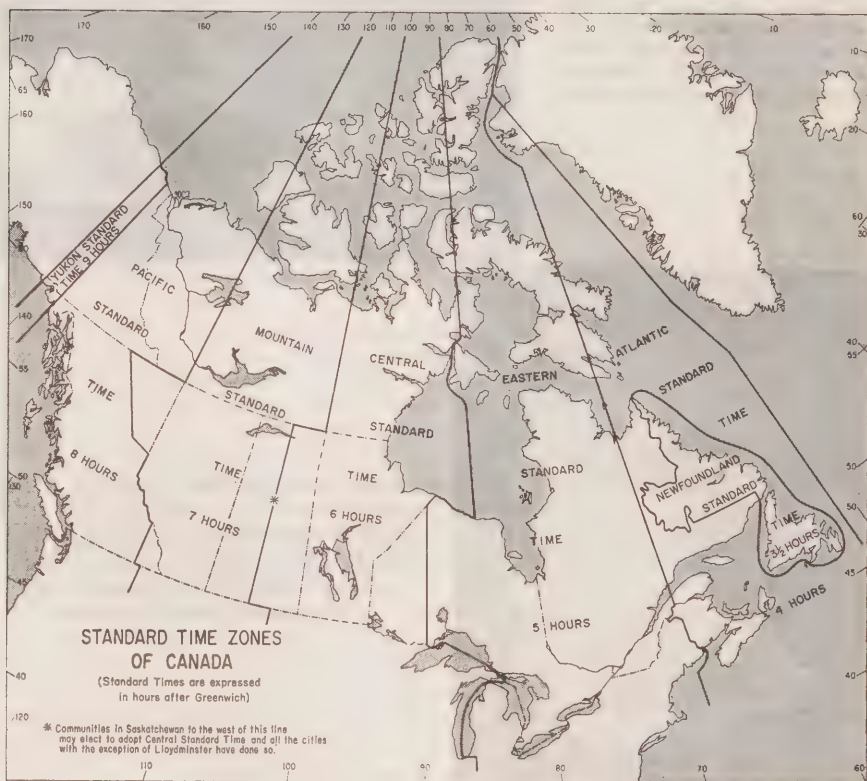

Plotting is done by visual observation through bubble windows in clear weather and by means of radar and closed-circuit electronic camera during periods of poor visibility. Navigational directives are immediately circulated to shipping and data recorded for the continuing study of problems associated with icy seas.

Section 3.—Standard Time and Time Zones

Standard Time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone ideally extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° of longitude apart. In practice, the zone boundaries are quite irregular for geographic and political reasons. Universal Time (UT) is the time of the zone centred on the zero meridian through Greenwich. Each of the other time zones is a definite number of hours ahead of or behind UT to a total of 12 hours, at which limit the international date-line runs roughly north-south through the mid-Pacific.

Canada has seven time zones, the most easterly being Newfoundland Standard Time, three hours and thirty minutes behind UT, and the most westerly Yukon Standard Time, nine hours behind UT. In between, from east to west, the remaining zones are called Atlantic, Eastern, Central, Mountain and Pacific.

Legal Authority for the Time Zones.—Time in Canada has been considered a matter of provincial rather than federal jurisdiction. Each of the provinces and the Northwest Territories has enacted laws governing the standard time to be used within its boundaries. These laws determine the location of the time zone boundaries. Lines of communication, however, have caused communities near the boundary of a time zone to adopt the time of the adjacent zone, and in most cases these changes are acknowledged by

amendments to provincial legislation. During the two World Wars, there were federal enactments concerning time but these were of temporary duration. In 1941 the Dominion Observatory time was declared the time to be used for official purposes in Canada.

Daylight Saving Time.—Although Daylight Saving Time had been urged in many quarters before World War I, its first use in Canada came as a federal war measure in 1918. Today most of the provinces have legislation controlling the provincial or municipal adoption (or rejection) of Daylight Saving. In the remaining provinces it is necessary to refer to the individual municipalities to determine whether, and between what dates, Daylight Saving is adopted in any particular year.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning one hundred years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

* Except where otherwise indicated, the data in this Chapter have been brought up to the date of Dec. 31, 1968. For reasons given on p. 108, the short sketches of departments, boards, commissions, etc., and of Crown corporations, normally appearing in Sections 2 and 3 of Part III, are carried in this edition in the Appendix, together with any other important changes that may occur between Dec. 31, 1968 and the date of going to press of the volume.

Although the new nation that came into being on July 1, 1867 was a federation comprised of four provinces (namely, Ontario, Quebec, New Brunswick and Nova Scotia) Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), Statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of provincial legislatures relating to provincial constitutional institutions and government

* See *A Consolidation of The British North America Acts 1867 to 1965*, consolidated by Elmer A. Driedger as of Jan. 1, 1967. Queen's Printer, Ottawa. 75 cents (Catalogue No. YX1-167).

matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be *ultra vires* or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and since then have been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see p. 56) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see p. 64 and p. 79).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Security of these rights was confirmed by the passage of a Canadian Bill of Rights—An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960. (See also Chapter IX, Sect. 1 on Canadian Criminal Law and Procedure.)

Amendment of the Constitution.—No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. An outline of the constitutional background to the problem, an annotated list of the fourteen occasions since 1867 when amendments to the British North America Act were made by the United Kingdom Parliament, a concise review of the prolonged search for a satisfactory amending procedure in Canada—the subject of repeated consideration in the Parliament of Canada and in a series of formal federal-provincial conferences and meetings in the years 1927, 1935-36, 1950, 1960-61 and 1964—and, more specifically, the text of a draft Bill “to provide for the amendment in Canada of the Constitution of Canada” (accompanied by explanatory notes relating thereto) which embodies the amending procedure or formula unanimously recommended by the Conference of Attorneys-General and unanimously accepted by the Conference of the Prime Minister and the Premiers (October 1964) are all made available in an official publication entitled *The Amendment of the Constitution of Canada*, authorized by the Minister of Justice, February 1965.*

Treaty-Making Powers.†—The Federal Government has exclusive responsibility for the conduct of external affairs as a matter of national policy affecting all Canadians. The policy of the Federal Government in discharging this responsibility is to seek to promote the interest of the entire country and of all Canadians of the various provinces within the over-all framework of the national policy.

In respect of matters of specific concern to the provinces of Canada, it is the policy of the Canadian Government, in a spirit of co-operative federalism, to do its utmost to assist the provinces in achieving the particular aspirations and goals that they wish to attain. The attitude of the Federal Government in this respect was illustrated by the “entente” signed by representatives of Quebec and France in the field of education in February 1965. The Quebec and federal authorities co-operated actively in a procedure that enabled the Province of Quebec, within the framework of the Constitution and the national policy, to participate in international arrangements in a field of particular interest to that province.

Thus, under existing procedures, the position is that, once it is determined that what a province wishes to achieve through agreements in the field of education or in other fields of provincial jurisdiction falls within the framework of Canadian foreign policy, the provinces may discuss detailed arrangements directly with the competent authorities of the country concerned. When a formal international agreement is to be concluded, however, the federal powers relating to the signature of treaties and the conduct of over-all foreign policy must necessarily come into operation.

The approach of the Canadian Government to the question of Canadian representation in international organizations of a social, cultural or humanitarian character reflects the same constructive spirit. It recognizes the desirability of ensuring that the Canadian representation in such organizations and conferences reflects in a fair and balanced way provincial and other interests in these subjects.

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3, and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and, by the Yukon Territory Act (SC 1898, c. 6), was declared to be a separate Territory.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Canadian governmental machinery or institutions function through the application of the British North America Act and its amendments and those other constitutional principles and developments—both “written” and “unwritten”—that have evolved from the combination of British law and traditions with Quebec’s adherence to the French language and habits of mind, all within a New World transcontinental environment. They are classified into three branches—the Executive, the Legislature and the Judiciary—and exist for each of the three levels of government in Canada—federal, provincial and local—functioning within their respective jurisdictions as specified respectively by the provisions of the British North America Act and by their statutes of origin.

Despite this *division* of the Government of Canada into three separate branches, Canada’s system of responsible government was long ago evolved from the British practice of the *union* of the executive and legislative branches which is the antithesis of the United States system embodying the opposing principle of the *division* or *separation* of executive, legislative and judicial powers or authorities from one another. As recounted under the heading of The Cabinet (pp. 58-59), there is a close identification of the Canadian legislative and executive branches of government, with final direction and authority emanating from the former. The Prime Minister and his Cabinet, which formulates and carries out all executive policy, have seats in Parliament and are responsible at all times to the House of Commons and it is here that the *principle of the union* of powers finds its significant expression. On the other hand, the guarantee of the independence of the judiciary, whose superior court judges are appointed by the Governor General (in actual fact by the Prime Minister), is ensured in the constitutional provision that they shall hold office during good behaviour and can be removed by the Governor General only after a joint address of both Houses of Parliament; in this guarantee is found a limited acceptance of the principle of separation of powers, for judges cannot be removed because their decisions happen to be disliked by the Cabinet, by Parliament, or by the people; they can conscientiously perform their judicial functions without fear or intimidation.

In addition to the political institutions embraced by the executive and legislative branches, the machinery of the government at the federal level includes the non-political public service consisting of employees of the state organized in about 25 departments of government, some two dozen special boards and commissions, and about 45 Crown corporations or other agencies engaged in administering various public services under their respective statutes and ultimately accountable, through a Minister, to Parliament. Part III of this Chapter recounts briefly the administrative functions of the Federal Government under four Sections, the first three describing the financial administration of the Government of Canada, the functions of each department, board, commission, and of each Crown corporation (whether classified as departmental, agency or proprietary under the Financial Administration Act) and the fourth listing the principal Acts of Parliament grouped according to the department charged with the administration thereof.

Current government organization and the delineation of the respective policies and administrative functions of the Ministers and their Departments are outlined in the Appendix to this volume and presented visually in the accompanying government organization chart.

Subsection 1.—The Executive

The Crown.—The British North America Act of 1867 (Sect. 9) provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown, which are substantially the same as those of The Queen in

The Rt. Hon. Roland Michener, Governor General of Canada, reading the Speech from the Throne at the opening of the Twenty-eighth Parliament on Sept. 12, 1968. The Prime Minister, the Rt. Hon. Pierre Elliott Trudeau, sits on his right and Mrs. Michener on his left, and directly in front of him sit the Judges of the Supreme Court of Canada. Senators and guests occupy the Chamber and Members of the House of Commons are called to the Bar just inside the entrance.

*Photo by
Malak, Ottawa*

relation to the British Government, are discharged in Canada by the Governor General in accordance with established principles of responsible government.

The Queen.—The personal participation of The Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, The Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, The Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the The Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 28, 1953. The title of The Queen, as far as Canada is concerned, now is:—

Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith.

1.—Sovereigns of Canada since Confederation, 1867

Name	Dynasty	Year of Birth	Date of Accession
Victoria.....	House of Hanover.....	1819	June 20, 1837
Edward VII.....	House of Saxe-Coburg and Gotha.....	1841	Jan. 22, 1901
George V.....	House of Windsor.....	1865	May 6, 1910
Edward VIII.....	House of Windsor.....	1894	Jan. 20, 1936
George VI.....	House of Windsor.....	1895	Dec. 11, 1936
Elizabeth II.....	House of Windsor.....	1926	Feb. 6, 1952

The Governor General.—The Governor General, appointed by The Queen as her personal representative in Canada on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of The Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1964. Acting under the recommendations of his responsible Ministers, in The Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are \$48,666 and \$72,000, respectively. Office expenses and certain other items of expenditure are provided for in the estimates for the Office of the Secretary to the Governor General.

The present Governor General is styled His Excellency The Right Honourable Roland Michener, C.C., C.D.

2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
THE VISCOUNT MONCK OF BALLYTRAMMON.....	June 1, 1867	July 1, 1867

MAJOR GENERAL THE EARL OF ATHLONE.....	Apr. 3, 1940	June 21, 1940
FIELD MARSHAL THE VISCOUNT ALEXANDER OF TUNIS.....	Mar. 21, 1946	Apr. 12, 1946
THE RIGHT HONOURABLE VINCENT MASSEY.....	Jan. 24, 1952	Feb. 28, 1952
GENERAL THE RIGHT HONOURABLE GEORGES P. VANIER.....	Aug. 1, 1959	Sept. 15, 1959
THE RIGHT HONOURABLE ROLAND MICHENER.....	Mar. 29, 1967	Apr. 17, 1967

The Cabinet.—The Cabinet is a committee of Ministers chosen by the Prime Minister (the leader of the political party forming the Government of the Day) generally from Members of Parliament. By convention, all members of the Cabinet either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government are generally Members of the House of Commons although there is nothing in the Constitution to prevent a Minister with Portfolio being a Senator.* However, they generally prefer to have seats in the House of Commons where all crucial legislation, by convention, is introduced and where they can offer explanations necessary to secure passage of their Estimates or legislation with which they are deeply concerned. Ministers without Portfolio (without a department to administer) can be members of either the House of Commons or the Senate. Frequently the Cabinet contains one Minister without Portfolio—usually the Leader of the Government in the Senate—and perhaps one or two others chosen for a variety of reasons such as the desirability of including certain provincial or sectional representation that might otherwise be lacking in the Ministry.

Cabinet members are selected by the Prime Minister in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

* Senator the Hon. Gideon Decker Robertson held the portfolio of Minister of Labour for the periods Nov. 7, 1918 to Dec. 29, 1921 and Aug. 7, 1930 to Feb. 2, 1932; Senator the Hon. Malcolm Wallace McCutcheon served as Minister of Trade and Commerce from Feb. 12 to Apr. 22, 1963.

The position of Prime Minister, the keystone of the Cabinet, is one of exceptional authority. He alone makes recommendations on the dissolution and convocation of Parliament, appointment of Privy Councillors, Cabinet Ministers, Lieutenant-Governors, Chief Justices, Senators, Speakers of the Senate and House of Commons, and Deputy Heads of departments. The Cabinet, under his leadership, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) loses the confidence of the House, it must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has lost the confidence of the House is granted a dissolution and is defeated in the ensuing general election, then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also exist as a result of a general election held subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

The Prime Ministers since Confederation are listed in Table 3 and the members of the Ministry as at Dec. 31, 1968 in Table 4. Sessional and other allowances received by Cabinet Ministers are given at p. 73.

3.—Prime Ministers since Confederation, 1867

Ministry	Name	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 — Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 — Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 — Apr. 27, 1896
7	Rt. Hon. Sir CHARLES TUPPER.....	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 — Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 — Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 12, 1917 — July 10, 1920 (Unionist Administration)
11	Rt. Hon. ARTHUR MEIGHEN.....	July 10, 1920 — Dec. 29, 1921 (Unionist—"National Liberal and Conservative Party")
12	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Dec. 29, 1921 — June 28, 1926
13	Rt. Hon. ARTHUR MEIGHEN.....	June 29, 1926 — Sept. 25, 1926
14	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Sept. 25, 1926 — Aug. 6, 1930
15	Rt. Hon. RICHARD BEDFORD BENNETT.....	Aug. 7, 1930 — Oct. 23, 1935
16	Rt. Hon. WILLIAM LYON MACKENZIE KING.....	Oct. 23, 1935 — Nov. 15, 1948
17	Rt. Hon. LOUIS STEPHEN ST. LAURENT.....	Nov. 15, 1948 — June 21, 1957
18	Rt. Hon. JOHN GEORGE DIFENBAKER.....	June 21, 1957 — Apr. 22, 1963
19	Rt. Hon. LESTER BOWLES PEARSON.....	Apr. 22, 1963 — Apr. 20, 1968
20	Rt. Hon. PIERRE ELLIOTT TRUDEAU.....	Apr. 20, 1968 — ...

4.—Members of the Twentieth Ministry, as at Dec. 31, 1963¹

(According to precedence of Ministers)

NOTE.—A complete list of the members of Federal Ministries from Confederation to 1913 appears in the 1912 Year Book, pp. 422-429. Later Ministries will be found in subsequent editions.

Office	Occupant	Date of First Appointment	Date of Appointment to Present Portfolio
Prime Minister	Rt. Hon. PIERRE ELLIOTT TRUDEAU..	Apr. 4, 1967	Apr. 20, 1968
Leader of the Government in the Senate...	Hon. PAUL JOSEPH JAMES MARTIN....	Apr. 22, 1963	Apr. 22, 1968

Minister of Indian Affairs and Northern Development	Hon. JEAN CHRÉTIEN.....	Apr. 4, 1967	July 5, 1968
Minister of Labour.....	Hon. BRYCE STUART MACKASEY.....	Feb. 9, 1968	July 5, 1968
President of the Queen's Privy Council for Canada	Hon. DONALD STOVEL MACDONALD....	Apr. 22, 1968	July 5, 1968
Minister of National Health and Welfare..	Hon. JOHN CARR MUNRO.....	Apr. 22, 1968	July 5, 1968
Secretary of State of Canada.....	Hon. GÉRARD PELLETIER.....	Apr. 22, 1968	July 5, 1968
Minister of Fisheries.....	Hon. JACK DAVIS.....	Apr. 26, 1968	July 5, 1968
Minister of Agriculture.....	Hon. HORACE ANDREW OLSON.....	July 5, 1968	July 5, 1968
Minister of Veterans Affairs.....	Hon. JEAN-EUDES DUBÉ.....	July 5, 1968	July 5, 1968
Minister of Consumer and Corporate Affairs	Hon. STANLEY RONALD BASFORD.....	July 5, 1968	July 5, 1968
Minister of Defence Production.....	Hon. DONALD CAMPBELL JAMIESON....	July 5, 1968	July 5, 1968
Postmaster General.....	Hon. ERIC WILLIAM KIERANS.....	July 5, 1968	July 5, 1968
Minister without Portfolio.....	Hon. ROBERT KNIGHT ANDRAS.....	July 5, 1968	July 5, 1968
Minister without Portfolio.....	Hon. JAMES ARMSTRONG RICHARDSON..	July 5, 1968	July 5, 1968
Minister without Portfolio.....	Hon. OTTO EMIL LANG.....	July 5, 1968	July 5, 1968

¹ Any change occurring between Dec. 31, 1968 and the date of going to press will be carried in an Appendix to this volume.

Parliamentary Secretaries.—The Parliamentary Secretaries Act (SC 1959, c. 15), assented to June 4, 1959, provides for the appointment of 16 Parliamentary Secretaries from among the Members of the House of Commons to assist the respective Ministers in such manner as each Minister may direct. The Government thus revived the system of parliamentary assistantships in practice during the World War II and postwar years subsequent to 1943, whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. Parliamentary Secretaries hold office for 12 months.

At Dec. 31, 1968, the following Parliamentary Secretaries were in office:—

<u>Secretary</u>	<u>Minister</u>
JAMES WALKER.....	Prime Minister
JEAN-PIERRE Goyer.....	Secretary of State for External Affairs
PAUL LANGLOIS.....	Public Works
GÉRARD LOISELLE.....	Manpower and Immigration
HERBERT E. GRAY.....	Finance
DAVID GROOS.....	National Defence
EUGENE F. WHELAN.....	Fisheries
ROBERT J. ORANGE.....	Energy, Mines and Resources
JEAN CHARLES CANTIN.....	Justice
JAMES McNULTY.....	Labour
YVES FOREST.....	President of the Privy Council
ROSAIRE GENDRON.....	National Health and Welfare
ROBERT D. G. STANBURY.....	Secretary of State of Canada
FLORIAN CÔTÉ.....	Agriculture
STANLEY HADASZ.....	Consumer and Corporate Affairs
RUSSELL HONEY.....	Forestry and Rural Development

The Privy Council.—The British North America Act of 1867 (Sect. 11) provides for "a Council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada...". At Dec. 31, 1968 it consisted of 135 members sworn of the Council by the Governor General on the advice of the Prime Minister. Membership in the Privy Council is for life so that Privy Councillors include both former and present Ministers of the Crown as well as a number of persons who have been, from time to time as an honour, sworn as Privy Councillors; these include members of the Royal Family, past and present Commonwealth Prime Ministers, and former Speakers of the Senate and of the House of Commons of Canada. The Council seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a Committee; the membership thereof, with a few historical exceptions, is identical to that of the Cabinet of the Day. A clear distinction between the functions of the Committee of the Privy Council and the Cabinet is rarely made and actually the terms "Council" and "Cabinet" are commonly employed as synonyms.

5.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Dec. 31, 1968

President of the Privy Council..... Hon. DONALD STOVEL MACDONALD
 Clerk of the Privy Council and Secretary to the Cabinet..... R. G. ROBERTSON

NOTE.—In this list the prefix "Rt. Hon." indicates membership in the British Privy Council, or is in accordance with the Table of Titles.

Member ¹	Date When Sworn In	Member ¹	Date When Sworn In
Hon. THOMAS ALEXANDER CRERAR.....	Oct. 12, 1917	Hon. LESLIE MISCAMPBELL FROST.....	Dec. 28, 1961

¹ The ordinary legal limit of duration for each Parliament is five years. ² Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (BNA Act, Sect. 50).

³ Date of general election. ⁴ Writs returnable. ⁵ Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957.

⁶ Includes long adjournment from July 13 to Sept. 7, 1961. ⁷ Government defeated in House of Commons on want of confidence motion. ⁸ Includes long adjournment from Aug. 2 to Sept. 30, 1963. ⁹ Includes long adjournment from Dec. 18, 1964 to Feb. 16, 1965.

¹⁰ Includes long adjournment from Dec. 18, 1964 to Feb. 16, 1965. ¹¹ House adjourned on June 30 until Sept. 27 but dissolved on Sept. 8, 1965. ¹² Includes long adjournment from June 30 to Sept. 27, superseded by dissolution on Sept. 8, 1965. ¹³ Includes 18-day Christmas adjournment, 11-day Easter adjournment, and two long adjournments totalling 70 days (July 14 to Aug. 29 and Sept. 9 to Oct. 5).

¹⁴ Includes adjournment from July 7, 1967 to Sept. 25, 1967; Christmas adjournment from Dec. 21, 1967 to Jan. 22, 1968; and Easter adjournment from Mar. 27, 1968 to Apr. 23, 1968.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of The Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice, most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVII for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1964, the legislative authority of the Parliament of Canada extends to the following: the amendment of the Constitution of Canada (subject to certain exceptions—see p. 53); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada may make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions. By the British North America Act, 1964, which received Royal Assent on July 31, 1964, this amendment was extended at the request of the Parliament of Canada (June 19, 1964) to permit the payment of supplementary benefits, including survivors' and disability benefits irrespective of age, under a contributory pension plan.

The Senate.—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is summarized by province in Table 7.

Senators are appointed by the Governor General by instrument under the Great Seal of Canada. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. Until the passage of "An Act to make provision for the retirement of members of the Senate" (SC 1965, c. 4), assented to on June 2, 1965, Senators were appointed for life; that Act fixes at

75 years the age at which any person appointed to the Senate after the coming into force of the Bill will cease to hold his place in the Senate.

In each of the four main divisions of Canada except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec, one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The Senate is not a competitor of the House of Commons in the field of legislation but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

¹ Any change occurring between Dec. 31, 1968 and the date of going to press will be carried in an Appendix to this volume.

² Resigned, effective Jan. 3, 1969.

³ Resigned, effective Jan. 5, 1969.

The House of Commons.—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be re-adjusted provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in

1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended (RSC 1952, c. 304, Sect. 51) (see Canada Year Book 1963-64, p. 75) to ensure that the representation of any province should not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualifications that the effect of the rule should not be to make the representation of a province with a smaller population greater than any province with a larger population.

Subsequently in 1952, Parliament enacted RSC 1952, c. 334, effective in the General Election of 1953 and in each successive General Election down to that of the Twenty-seventh Parliament (Nov. 8, 1965), which provided that representation in the House of Commons should be on the following basis:—

Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members.

1965 Redistribution of Representation in The House of Commons.—The Representation Commissioner Act setting up the office and duties of the Representation Commissioner was given Royal Assent on Dec. 21, 1963. The Electoral Boundaries Readjustment Act providing for the establishment of Electoral Boundaries Commissions to report upon and to provide for the readjustment of the representation of the provinces in the House of Commons in accordance with the findings of the 1961 Census of Population was given Royal Assent on Nov. 20, 1964.

Pursuant to Sect. 11 of the Electoral Boundaries Readjustment Act, the Dominion Statistician sent to the Representation Commissioner a certified return showing the population of Canada and of each of the provinces and the population of Canada by electoral districts as ascertained by the 1961 Census. The Representation Commissioner calculated the number of members of the House of Commons to be assigned to each of the provinces subject and according to the provisions of Sect. 51 of the British North America Act, 1867, and the rules provided therein. He then caused a statement to be published in the *Canada Gazette* of Nov. 28, 1964, setting forth the following results:—

Eighty-eight members of the House of Commons shall be elected for the Province of Ontario, seventy-four for the Province of Quebec, eleven for the Province of Nova Scotia, ten for the Province of New Brunswick, thirteen for the Province of Manitoba, twenty-three for the Province of British Columbia, four for the Province of Prince Edward Island, thirteen for the Province of Saskatchewan, nineteen for the Province of Alberta and seven for the Province of Newfoundland.

The Governor General, by proclamation published in the *Canada Gazette*, established an Electoral Boundaries Commission for each province. It was the task of each Commission to prepare, with all reasonable dispatch, a report setting forth its recommendations concerning the division of its particular province into electoral districts and the recommendations concerning the description of the boundaries of each such district and the representation and name to be given thereto. A copy of the 1961 Census return was sent to the chairman of each Commission immediately after its members were appointed.

Pursuant to Sect. 8 of the Representation Commissioner Act, maps were prepared in the office of the Representation Commissioner showing the distribution of population

in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province; these maps were then supplied to the respective Commissions. The Commissions complied with the procedure of the Electoral Boundaries Act and completed their reports within the time prescribed, which was one year. Two certified copies of each report were received by the Representation Commissioner; as required by Sect. 19(1) of that Act, one of these copies was transmitted to the Speaker of the House of Commons, who in turn laid it before the House of Commons.

Then followed a period of thirty days in which objections in writing, signed by no fewer than ten members of the House of Commons, were filed with the Speaker specifying the provisions of the report objected to and the reasons for the objection. A further period of 15 days was set aside in which the House of Commons was to consider the matter of the objections; this period was increased to 45 sitting days by an Act, assented to on Feb. 23, 1966, entitled "An Act to extend the time for consideration of objections pursuant to section 20 of the Electoral Boundaries Readjustment Act with respect to the reports of commissions established for the decennial census taken in the year 1961".

Several objections were filed with the Speaker, the motions were taken up and considered and the reports referred back to the Representation Commissioner by the Speaker and then to the Commissions. On the expiration of a 30-day period for that purpose, the Commissions returned their reports with or without amendment, through the Representation Commissioner to the Speaker. Then a draft representation order was prepared by the Representation Commissioner to be transmitted to the Secretary of State. This order specified the number of members of the House of Commons who shall be elected for each of the provinces as calculated by the Representation Commissioner and, dividing each of the provinces into electoral districts, described the boundaries of each such district and specified the representation and name given thereto, in accordance with the recommendations contained in the reports. The Governor in Council, by proclamation of June 16, 1966, declared the draft representation order to be in force, effective upon the dissolution of the then-existing Parliament.

At the subsequent election, according to the representation order set out in the Schedule to the Proclamation, 88 members of the House of Commons shall be elected for the Province of Ontario, 74 for the Province of Quebec, 11 for the Province of Nova Scotia, 10 for the Province of New Brunswick, 13 for the Province of Manitoba, 23 for the Province of British Columbia, four for the Province of Prince Edward Island, 13 for the Province of Saskatchewan, 19 for the Province of Alberta and seven for the Province of Newfoundland. In addition, one member each will be elected for the Yukon Territory and the Northwest Territories, making a total representation of 264 in the House of Commons.

The number of representatives of each province elected at each of the 28 General Elections since Confederation is given in Table 9.

Indemnities and Allowances.—Members of the Senate and House of Commons receive a sessional allowance at the rate of \$12,000 per annum. In addition, for each session of Parliament, they may be paid travelling expenses between their place of residence or constituency and Ottawa as may be required for the performance of their duties as members of the Senate and House of Commons. Senators receive an annual expense allowance of \$3,000 and members of the House of Commons receive an expense allowance of \$6,000, neither of which is subject to income tax, and is payable quarterly. The member of the Senate occupying the recognized position as Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of \$10,000 and to the member of the Senate occupying the recognized position as Opposition Leader in the Senate there is paid, in addition to his sessional allowance, an annual allowance of \$6,000; but if the Leader of the Government is in receipt of a salary under the Salaries Act the annual allowance is not paid. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition in the House of Commons \$15,000 a year in addition to the sessional and expense allowances each receives as a member of Parliament. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the sessional and expense allowances, the latter being not taxable. Additional annual allowances of \$4,000 (beyond the above-noted sessional allowance) are provided to each Leader of a Party having a recognized membership of twelve or more persons in the House of Commons other than the Prime Minister and the member occupying the recognized position as Leader of the Opposition in the House of Commons and, likewise, to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of \$9,000 per annum. The Deputy Speaker of the House of Commons receives a salary of \$6,000 per annum. The Speakers of the Senate and the House of Commons are also entitled to \$3,000 in lieu of residence and the Deputy Speaker of the House of Commons an allowance of \$1,500 in lieu of residence; these allowances are not taxable. The Deputy Chairman of Committees receives an annual allowance of \$4,000. Parliamentary Secretaries to the Ministers of the Crown receive an annual allowance of \$4,000 a year, in addition to their sessional and expense allowances. A motor vehicle allowance of \$2,000 is paid to each Minister

of the Crown and to the recognized Leader of the Opposition in the House of Commons, and a motor vehicle allowance of \$1,000 is paid to the Speakers of the Senate and of the House of Commons; these allowances are not taxable.

A member of Parliament contributes, by reservation, 6 p.c. of his full sessional indemnity toward his retirement allowance, which is based on five twelfths of the total contributions, paid or elected to be paid; to the widow of an ex-member is paid three fifths of the allowance paid or payable to the ex-member at the time of his death. The maximum allowance payable to an ex-member is \$9,000 per annum and the maximum payable to the widow of an ex-member is \$5,400 per annum.

An Act to make provision for the retirement of members of the Senate (SC 1965, c. 4) entitles a Senator appointed after June 2, 1965 to become a contributor under the provisions of the Members of Parliament Retiring Act. Senators appointed prior to that date and who have not attained the age of 75 years, who elect under the provisions of this Act, are also entitled to become contributors. Under the provisions of the Retirement Act, a Senator contributes, by reservation, 6 p.c. of his sessional indemnity to the Consolidated Revenue Fund. A Senator appointed before June 2, 1965 who (a) within one year of attaining the age of 75 years resigns his place in the Senate or (b) resigns due to some permanent infirmity disabling him from performing his duties in the Senate, may be granted an annuity equal to two thirds of his sessional indemnity for life. The widow of a person granted such an annuity may receive an annuity equal to one third of the annuity to the ex-member of the Senate.

Every former Prime Minister who held office for four years will receive from the Consolidated Revenue Fund an allowance of two thirds of the annual salary provided for Prime Ministers under the Salaries Act, the allowance to commence when the former Prime Minister ceases to hold office, or attains the age of 70 years, whichever is the later, and to continue during his lifetime. The widow of a Prime Minister will receive an annual payment of one third of the allowance that was being paid or that would have been paid to her husband, where he dies without receiving the allowance, such allowance to commence immediately after the death of her husband and to continue during her natural life or until her remarriage. None of these allowances is payable while the recipient is a Senator or a member of the House of Commons.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:—

- (1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) judges appointed by the Governor General in Council;
- (3) the returning officer for each electoral district;
- (4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
- (6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act. The Eskimos who are Canadian citizens

possess the right to vote in federal elections, and the assumption of that right in the far-flung communities of the Canadian Far North has grown with Government establishment of electoral districts and polling facilities.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

11.—Voters on the Lists and Votes Polled at the Federal General Elections of 1962, 1963, 1965 and 1968

Note.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1945-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; those for 1945 in the 1957-58 edition, p. 57; those for 1949, 1953 and 1957 in the 1962 edition, p. 71; and those for 1958 in the 1966 edition, p. 90.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act from time to time to provide for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Com-

mons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

12.—Chief Justice and Judges of the Supreme Court of Canada, as at Oct. 6, 1968

(In order of seniority)

Name	Date of Appointment

Hon. Mr. Justice WISHART FLETT SPENCE.....	May 30, 1963
Hon. Mr. Justice LOUIS-PHILIPPE PIGEON.....	Oct. 6, 1967

¹ First appointed a Judge of the Supreme Court, Dec. 23, 1949.

Exchequer Court of Canada.—The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and six puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute, the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court

exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada and by the National Transportation Act, 1967 (SC 1966-67, c. 69) to the Canadian Transport Commission. This court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act and Estate Tax Act.—By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

National Defence Act.—The Court Martial Appeal Court was established in 1959 by an amendment to the National Defence Act (SC 1959, c. 5). The judges of the Court are not fewer than four judges of the Exchequer Court of Canada designated by the Governor in Council and such additional judges of a superior court of criminal jurisdiction as are appointed by the Governor in Council. The Governor in Council designates one of the judges to be president of the Court. The Court hears appeals from courts martial respecting the legality of a finding of guilty on any charge and the legality of a sentence passed by a court martial. An appeal lies from the Court Martial Appeal Court to the Supreme Court of Canada on a question of law only.

Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92(14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55; a re-organization of the Supreme Court of Nova Scotia became effective Aug. 1, 1966.

removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the presiding officers of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are *ex officio* judges of the Territorial Court of the Northwest Territories and vice versa. There is a Court of Appeal for each of the Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, The Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 57 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly. The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, although wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, main-

* Except where indicated, the information given in this Section is brought up to Dec. 31, 1968. Any important changes occurring between that date (or the date given) and the time of going to press will be found in an Appendix to this volume.

tenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment in enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at a specified age (18 to 21 years) who is a Canadian citizen or (in certain provinces) other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. Voting privileges are given to persons in Prince Edward Island, Quebec and Saskatchewan at the age of 18, in Newfoundland, Alberta and British Columbia at 19 years, and in the remaining provinces at 21 years.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Sept. 8, 1966 is the 34th in the history of Newfoundland and the 6th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had four Lieutenant-Governors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; the Hon. Campbell Macpherson commissioned Dec. 16, 1957; and the Hon. Fabian O'Dea commissioned Mar. 1, 1963. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on Dec. 31, 1968.

The Premier receives a salary of \$12,000 and the other Cabinet Ministers \$11,000 per annum, plus a sessional indemnity of \$5,666.67 and a travelling and expense allowance of \$2,833.33. Each member of the House of Assembly receives a sessional indemnity of \$5,666.67 plus a travelling and expense allowance of \$2,833.33. An additional allowance of \$5,000 is made to the Leader of the Opposition.

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105; since that date, the position has been held by the Hon. F. W. Hyndman, appointed effective Mar. 31, 1958, followed by the Hon. W. J. MacDonald, appointed effective Aug. 1, 1963.

The Legislative Assembly elected May 30 and July 11, 1966 is the 51st in the history of Prince Edward Island Legislatures and the 26th since Confederation. It has 32 members from 16 electoral districts who may serve for a statutory term of five years. Each district elects one Councillor and one Assemblyman. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105. The Hon. Walter R. Shaw was Premier from Sept. 16, 1959 until the present Premier took office following the General Election of May 30, 1966.

The annual salary of the Premier is \$9,000, of a Cabinet Minister \$6,000 and of a Minister without Portfolio \$3,600. A member of the Assembly receives \$2,666.67 for each regular Session attended by him and an additional amount of \$1,333.33, tax-free, for travelling and other expenses incurred in connection with Session attendance and representing his district; the Speaker of the Assembly receives a further additional sum of \$1,000 and an additional amount of \$500, tax-free, for travelling and other expenses incurred in connection with his official duties for each Session; to cover like expenditures the Deputy Speaker receives a further additional sum of \$600 and an additional amount of \$300, tax-free, and the Leader of the Opposition a further additional sum of \$1,666.67 and an additional amount of \$833.33, tax-free. Payment for indemnity for travelling and other expenses incurred by a member of the Legislature, the Speaker, the Deputy Speaker and the Leader of the Opposition accrue from his election to the Legislature and are paid monthly. No sessional indemnity or expenses are paid for any special Session of the Legislature.

15.—Legislatures of Prince Edward Island, 1955-68, as at Dec. 31, 1968

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 75; for 1924-35 in the 1935 edition, p. 110; and for 1936-47 in the 1963-64 edition, p. 82.

Subsection 3.—Nova Scotia

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106; since that date the position has been held by Maj.-Gen. the Hon. E. C. Plow, commissioned to office Sept. 1, 1958, followed by the Hon. H. P. MacKeen, commissioned to office Mar. 1, 1963, and the Hon. Victor deB. Oland, commissioned to office July 22, 1968.

The Legislature has 46 members elected for a maximum term of five years. The Legislature elected May 30, 1967 is the 49th in Nova Scotia's history and the 26th since Confederation. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 107; the Hon. Walter R. Shaw was the Premier at that time and held office until 1967 when the present Premier assumed office.

The Premier of the province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum and \$800 per annum as expenses of representation. Each member of the House of Assembly receives a sessional indemnity of \$4,000 and an allowance of \$2,000 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$7,200 and an \$800 representation allowance in addition to his sessional indemnity.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors since Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 108; since that date, the position has been held by the Hon. J. Leonard O'Brien, appointed June 6, 1958, followed by the Hon. John B. McNair, appointed June 9, 1965, and the Hon. W. S. Bird appointed Feb. 1, 1968.

The Legislature elected Oct. 23, 1967 is the 46th in New Brunswick's history and the 19th since Confederation. It has 55 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108; the present Premier assumed office in 1960.

The Premier receives \$20,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$12,000 and the amount paid as indemnity to each member of the House of Assembly is \$5,000 plus an additional \$2,500 allowance for expenses. The Leader of the Opposition receives an additional \$8,000 and the Speaker receives an allowance of \$1,000 in addition to the regular indemnity.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a National Assembly. The Legislative Council—the upper chamber of the Quebec Government for 101 years—was abolished by Act of the Quebec Legislature on Nov. 29, 1968, effective Dec. 31, 1968, and by the same Act the name of the Legislative Assembly was changed to “National Assembly of Quebec”.

Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109; since that date the position has been held by the Hon. Onésime Gagnon, commissioned to office Feb. 14, 1958, followed by the Hon. Paul Comtois, commissioned to office Oct. 6, 1961, and the Hon. Hugues Lapointe, commissioned to office Feb. 22, 1966.

The National Assembly has 108 elected members elected for a maximum period of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110; the Hon. Jean Lesage became Premier in 1960, the Hon. Daniel Johnson in 1966, and the Hon. Jean-Jacques Bertrand on Sept. 26, 1968.

Each member of the National Assembly receives a sessional indemnity of \$12,000 and an expense allowance of \$6,000. In addition to this indemnity and allowance, the Premier receives an annual indemnity of \$16,000, a representation allowance of \$4,000 and an allowance in lieu of residence of \$2,000; Ministers with Portfolio receive an annual indemnity of \$12,000, plus a supplement of \$3,000 for representation; Ministers without Portfolio receive an indemnity of \$12,000, plus a representation allowance of \$3,000; the Speaker (President) receives an indemnity of \$10,000, a representation allowance of \$2,000 and an allowance in lieu of residence of \$1,000; the Deputy Speaker (Vice-president) receives an indemnity of \$5,000 and a representation allowance of \$1,000. The Leader of the Opposition receives an indemnity of \$10,000, a representation allowance of \$3,000 and an allowance in lieu of residence of \$2,000.

21.—Legislatures of Quebec, 1955-68, as at Dec. 31, 1968

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78; for 1924-35 in the 1938 edition, p. 113; and for 1936-48 in the 1963-64 edition, p. 85.

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112; since that date the position has been held by the Hon. Justice John Keiller Mackay, appointed effective Dec. 30, 1957, followed by the Hon. William Earl Rowe, appointed effective May 1, 1963, and the Hon. W. Ross Macdonald, appointed effective July 4, 1968.

The House of Assembly, the single-chamber Legislature of the province, is composed of 117 members elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 112; the Hon. John Parmenter Robarts became Premier on Nov. 8, 1961 upon the resignation of the Hon. Leslie M. Frost, Premier from May 4, 1949.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208 as amended) each member of the Assembly is paid an annual indemnity of \$8,000 and an allowance for expenses at the rate of \$3,000 for every member of the Assembly representing an electoral district within the Municipality of Metropolitan Toronto and \$4,000 for every member representing any other electoral district. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$2,000; and the Leader of the Opposition a salary of \$12,000 per annum in addition to his indemnity as a member. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$16,000 and for a Cabinet Minister having charge of a department \$12,000. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receive a representation allowance of \$2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives \$2,500 salary and \$1,000 representation allowance per annum.

23.—Legislatures of Ontario, 1955-68, as at Dec. 31, 1968

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79; for 1924-34 in the 1938 edition, p. 114; and for 1935-50 in the 1963-64 edition, p. 87.

Subsection 7.—Manitoba

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 12 members and a Legislative Assembly of 57 members elected for a statutory term of five years. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113; since that date, the position has been held by the Hon. Errick F. Willis, sworn in on Jan. 15, 1960, followed by the Hon. Richard S. Bowles, sworn in on Sept. 1, 1965. Premiers since Confederation are listed in the 1960 Year Book, p. 114; the Hon. Dufferin Roblin, who became Premier on June 30, 1958, remained in office until 1967 when the present Premier assumed office.

The Premier of the province is paid a salary of \$16,600 per annum and each of the other members of the Cabinet \$15,600. Members of the Legislature are each paid a sessional indemnity of \$4,800 and a tax-free expense allowance of \$2,400 plus an allowance of \$20 a day for a period of 60 days continuous sitting including Saturdays and Sundays for members outside Metro Winnipeg who have to take board and lodging in Winnipeg during legislative sessions. The Leader of the Opposition is paid \$15,600 and the Speaker of the Legislature receives \$9,600 which is an amount equal to double the indemnity of an individual member.

25.—Legislatures of Manitoba, 1955-68, as at Dec. 31, 1968

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80; for 1924-36 in the 1938 edition, p. 115; and for 1937-49 in the 1963-64 edition, p. 88.

Subsection 8.—Saskatchewan

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115; since that date the office has been held by the Hon. F. L. Bastedo, commissioned to office Jan. 27, 1968, followed by the Hon. Robert L. Hanbidge, commissioned to office Mar. 1, 1963.

The statutory number of members of the Legislative Assembly is 59, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115; the Hon. W. S. Lloyd became Premier in 1961 and the Hon. W. R. Thatcher in 1964.

The Premier receives \$18,500 and each Cabinet Minister \$13,500 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$13,500 plus an office allowance of \$17,500 per annum, the Speaker \$1,500 and the Deputy Speaker \$2,500. The sessional indemnity of a member of the Legislature is \$6,000 together with an expense allowance of \$3,000. Each of the members for the three northernmost constituencies of Prince Albert East-Cumberland, Athabasca and Meadow Lake receives a \$6,000 sessional indemnity and a \$3,500 expense allowance.

27.—Legislatures of Saskatchewan, 1955-68, as at Dec. 31, 1968

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81; for 1924-34 in the 1938 edition, p. 116; and for 1935-48 in the 1963-64 edition, p. 89.

Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are listed in the 1960 Year Book, p. 116; since that date the office has been held by the Hon. J. Percy Page, commissioned to office Dec. 19, 1959, followed by the Hon. J. W. Grant MacEwan, commissioned in January 1966.

There are 65 members in the Legislative Assembly, elected for a maximum period of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 117; the Hon. Ernest C. Manning, the Premier at that time, resigned in 1968.

Each member of the Legislative Assembly (except the Speaker, the Deputy Speaker and the Leader of the Opposition) receives a sessional indemnity of \$1,800 plus \$2,400 expense allowance plus \$15 for each day during the session when the member is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional in-

demnity is \$8,000 plus \$4,000 expense allowance, the Deputy Speaker's sessional indemnity is \$6,400 plus \$3,200 expense allowance, and the Leader of the Opposition's sessional indemnity is \$7,200 plus \$3,600 expense allowance. Each also receives \$15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives \$18,000 and each of the other Ministers receives \$15,000.

29.—Legislatures of Alberta, 1955-68, as at Dec. 31, 1968

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82; for 1924-34 in the 1938 edition, p. 117; and for 1935-48 in the 1963-64 edition, p. 90.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118; since that date the position has been held by Maj. Gen. the Hon. George Randolph Pearkes, commissioned to office Oct. 12, 1960, followed by Col. the Hon. J. R. Nicholson, commissioned to office on July 2, 1968.

The Legislative Assembly, elected for a statutory term of five years, has 55 members. Premiers from Confederation to 1959 are cited in the 1960 Year Book, p. 118; the present Premier assumed office in 1952.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$5,000 and \$1,500 for expenses. There is also paid to each member

a living allowance of \$1,000 and each member receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of \$500 for telegraph and telephone expenses. In addition, the Premier receives a salary of \$20,000, each member of the Executive Council with a portfolio receives \$17,500 annually and each member of the Executive Council without portfolio receives \$6,000. The Leader of the Opposition receives a special allowance of \$7,500 for expenses, the Speaker receives a special allowance of \$7,500, and the Deputy Speaker a special allowance of \$2,500.

31.—Legislatures of British Columbia, 1953-68, as at Dec. 31, 1968

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83; for 1924-37 in the 1938 edition, p. 118; and for 1938-52 in the 1963-64 edition, p. 91.

Subsection 11.—Yukon Territory and Northwest Territories***Yukon Territory**

The Yukon was established as a separate territory in 1898 to meet a need for local government created by the influx of miners during the gold-rush period. The Yukon Territory Act provided for a Commissioner and a Council of not more than six, all appointed by the Governor in Council. The Commissioner in Council was given legislative powers comparable to those held by the Lieutenant-Governor and the Legislative Assembly of the Northwest Territories. By 1902, five elected councillors had been added and in 1908 a fully elected Council of ten members was introduced. A population decline following the end of the gold rush was accelerated by enlistment during World War I and in 1919 the Council was reduced to three elected members. This remained the level of government until after World War II when population and economic activity again showed an increase, beginning with the building of the Alaska Highway. In 1960, the Council was increased to seven elected members and provision was made for the appointment of an Advisory Committee on Finance.

Basic Legislation.—A principal feature of territorial government is its very close constitutional and working relationship with the Government of Canada. Although the provinces and the Federal Government each have jurisdiction and powers allocated by the British North America Act, the authority of the Territorial Government is allocated only by federal legislation. The Yukon Act prescribes the structure of the executive, legislative and judicial branches of the Territorial Government and the scope of their authority; all residual matters remain under federal control. The Territory has fully representative but not responsible government. The Act has been amended to give increased authority to the Territorial Government and it provides that the number of subjects on which the Territorial Council can legislate may be increased by the Governor in Council. The Yukon Act also provides for the designation of the seat of government; Whitehorse, the single large community in the Territory, was so designated in 1953.

The Government Organization Act, 1966, which describes the responsibilities of the Department of Indian Affairs and Northern Development for the development of Northern Canada, is the other piece of basic legislation under which the Territorial Government operates. The Minister is responsible for the management of the natural resources (except game) and for the development of the North generally. Although he shares authority with the Governor in Council for directing the Commissioner in his duties, he is the effective link between the Territorial and Federal Governments.

The Executive.—The executive side of the Territorial Government is headed by a Commissioner appointed by the Federal Government. He is directed to administer the Government of the Territory under instruction from the Governor in Council or the Minister of Indian Affairs and Northern Development. In practice, the Commissioner is much more responsive to the wishes of his elected Council than the Act implies and he cannot spend any territorial funds which have not been voted by Council. There is also a growing body of other territorial legislation (ordinances) which requires the Commissioner to obtain Council approval for specific actions; actually he never acts on any major issue without consulting Council.

Because the Commissioner does not sit with Council, there is no formal integration of the executive and legislative functions of government at Council sessions. The most recent development toward bridging this gap was the formation of an Advisory Committee on Finance, provided for by the 1960 amendment to the Yukon Act. The Committee consists of three Members of Council appointed by the Commissioner on the advice of Council, with whom the Commissioner is required to consult in the preparation of his estimates of expenditures and appropriations. The Committee accompanies the Com-

* Prepared under the direction of the Deputy Minister, Department of Indian Affairs and Northern Development, Ottawa.

missioner to Ottawa annually for discussion with the Minister of territorial estimates and any other major problems of the moment. By its own choice, Council has made membership on the Committee rotational by replacing one member each year.

The Yukon Act also provides for an Administrator to carry out the functions of the Commissioner in his absence. In practice, this responsibility is carried by an Executive Assistant to the Commissioner, a federal public servant. Below the Commissioner's office, the Territorial Public Service is organized into eight conventional administrative departments under the direction of the Commissioner: all are located in Whitehorse. Territorial Government administration is represented in outlying communities by a limited number of Territorial Agents who are concerned mainly with the sale of liquor and licences but most territorial services are administered from Whitehorse. Health facilities are administered mainly by the federal Department of Health and Welfare. Federal involvement in the operation of health services in the Territory stems from its responsibility for Indians and from practical administrative considerations. All schools are under the direction of the Territorial Department of Education with headquarters in Whitehorse. The Territorial Government has well-developed engineering and welfare services. The Territorial Public Service numbers about 900 persons, including some 200 school teachers and vocational school instructors.

Some administrative areas such as natural resources, which are the responsibility of the Department of Indian Affairs and Northern Development, are administered by federal public servants reporting through the Commissioner who, in addition to his territorial role, is also the Department's senior federal representative in the Territory. Because the Minister of Justice is the Attorney General of the Territory for purposes of the Criminal Code of Canada, the administration of justice in the Territory is still provided, at direct federal expense, by the Department of Justice and the Royal Canadian Mounted Police. In 1967, the Territory started a correctional system which is operated along the lines of a provincial penal service.

The Legislature.—The Legislative Council consists of seven members elected for a term of three years. Three of the members represent electoral districts located in or close to Whitehorse where about half of the some 15,000 residents of the Territory live. As in many other matters, a federal agency (Chief Electoral Officer) conducts the territorial elections as a free service to the Territory. Council normally meets in session twice each year. The first session commences in March and has as a major part of its work the voting of the main territorial estimates which have been prepared by the Commissioner and agreed to by its Advisory Committee on Finance and the Minister. The second session is usually called in November and special sessions can be held at any time. Main sessions last from one to two months and the debates are recorded verbatim and published under the title of Votes and Proceedings. The Commissioner calls Council into session and prorogues it; he sits with it only by invitation to explain or defend a proposed expenditure, draft legislation and policy papers which he has placed before Council. All sessions are presided over by a Speaker who is appointed by Council from among its members for the duration of each Council. The Yukon Act contains only a single oblique reference to the position of Speaker and gives him no specific responsibilities or authority. In practice, he conducts Council proceedings under Rules of Council which are an adaptation of Canadian parliamentary procedures. He sometimes represents Council on formal occasions but Council has not sought to increase the stature of this position, the origin of which is probably related to the large United States element in the Territory during and following the gold-rush period and its predilection for the form of government established in the United States. A Clerk of Council controls the administrative side of its proceedings.

The matters on which Council can legislate are not significantly fewer than those enjoyed by the provinces. The main exceptions concern natural resources. These are a responsibility of the Federal Government which has to provide the heavy investments in

transportation and other facilities needed to bring them into production. Most major policy matters are first placed before Council in the form of a Sessional Paper prepared by the Commissioner, and the draft legislation is then presented at the next session in the form of a Bill, although amendments to existing legislation may be processed concurrently with the Sessional Paper or without the assistance of this background information. Discussion is conducted usually with the Council resolved into Committee of the Whole when the Commissioner, heads of departments and outside specialists appear to give detailed information and advice on particular subjects. Bills are given three readings and require the assent of the Commissioner before they become law as Ordinances of the Territory. The Commissioner can reserve assent to legislation but rarely does so. As with provincial legislation, the Federal Government may disallow any Ordinance but within a longer period of two years. New Ordinances are published after each session, and as Consolidated Ordinances of the Yukon Territory which are usually revised every ten years.

The Judiciary.—Before it was created a Territory in 1898, the Yukon was designated as the Yukon Judicial District. The Yukon Act provides for a Territorial Court which consists of a single judge of superior court rank and one police magistrate. Both are located in Whitehorse. There are 28 justices of the peace, appointed by the Governor in Council, at 13 locations in the Territory. The Judge of the Territorial Court of the Northwest Territories is *ex officio* Judge in the Yukon and vice versa. There is also a Special Court of Appeal consisting of the Chief Justices of British Columbia, the Justices of Appeal of British Columbia and the Judge of the Territorial Court of the Northwest Territories.

The Role of the Federal Government.—Direct federal involvement in the affairs of the Territorial Government extends from control of its constitution to responsibility for the operation of certain provincial-type services and for providing the bulk of its finances. The constitutional arrangement has been described, as have some of the federally operated provincial-type services, e.g., justice and law enforcement and the health services. Beyond these special services, the Federal Government provides the usual range of national services such as the operation of Canadian Broadcasting Corporation radio stations, mail delivery and mainline airports. Full assistance under all national welfare programs is available in the Territory. Even with special financial assistance in many particular areas, the low volume of local revenues falls far short of meeting the high cost of services provided by the Territorial Government. The Federal Government picks up this financial deficit through fiscal arrangements known as Federal-Territorial Financial Agreements. These agreements have a definite term, usually five years, and serve to both allocate the particular functions to be carried out in the Territory by each government and indicate the amount of federal financial assistance the Territorial Government will receive within the life of the agreement. The allocation of responsibility for providing a particular service is usually related to the ability of the Territorial Government to undertake the task. The amount of federal financial assistance given to the Territorial Government is simply the difference between the forecast of revenues available to the Territorial Government and the forecast of the cost of a reasonable level of services to be provided by that Government. In the process, the Territorial Government forgoes its authority to tax private and corporate incomes and to collect other corporation taxes and succession duties.

Setting aside special accounts such as housing loans and amortization of borrowings from the Federal Government for which individual arrangements are made, the Yukon Government in the year ended Mar. 31, 1968, spent nearly \$9,400,000 on operational account and another \$3,246,000 on capital account. Of the total expenditure of approximately \$12,650,000, the Territorial Government raised about \$2,900,000 locally and recovered another \$3,126,000 from the Federal Government via shared-cost programs. The remainder was provided by the Federal Government under its financial agreement with the Territory.

COMMISSIONER, COUNCIL AND COUNCIL STAFF OF THE YUKON TERRITORY
(as at Dec. 31, 1968)

Commissioner.....	J. SMITH

Territorial Secretary and Clerk of the Council.....	H. J. TAYLOR
Legal Adviser.....	P. O'DONOGHUE

Northwest Territories

The Temporary Government Act of 1869 was the first legislation by the Federal Government to establish government in the newly acquired Rupert's Land and North-Western Territory. However, functional territorial government really dates from the North-West Territories Act of 1875. The creation of the Provinces of Saskatchewan and Alberta in 1905 and the adjustment of the northern boundaries of the Provinces of Manitoba, Ontario and Quebec by 1912 pushed the Territories north of the 60th parallel. The 1905 legislation provided for a federally appointed Commissioner with wide executive and legislative powers and a Council of four but no Councillors were appointed for 16 years. In 1921 the Council was expanded to six members and, until 1946 when the first territorial resident was appointed, it was comprised entirely of senior federal officials.

Defence early warning systems, radio and greatly improved air transportation after World War II ended the extreme isolation of the North and pressures for improved territorial government soon followed. The main advances came with legislative changes in 1951 and 1952 when the Council membership was increased to eight, with three of these elected from the Mackenzie District. A fourth was added in 1954. At least two Council sessions were required to be held in a year; one in the Territories and all others at the seat of government in Ottawa. The subjects on which the Commissioner in Council could legislate were increased to approximate those of the provincial legislatures except that natural resources (other than game) were reserved to the Federal Government. A Territorial Court was established.

Recent Constitutional Developments.—The quickening of federal interest in the North in the 1950s, stimulated concern and effort to arrange for a resident territorial government and to chart the course of its future development. The first action was taken in 1963 when it was proposed to divide the Northwest Territories into two territories to allow the residual "Mackenzie Territory" to have a resident administration and to advance more rapidly than the proposed "Nunassiat Territory" in the Eastern Arctic. While the disparity between the physical, economic and social conditions in the two areas was recognized, the draft legislation met strong opposition and the Bills did not survive beyond first reading and committee examination. However, an amendment to the Northwest Territories Act in 1966 created three new electoral districts in the Eastern Arctic and, for the first time, gave elected representation to all residents of the Territories. Also, at the ensuing election the first Eskimo was elected to the Territorial Council. A separate consolidated revenue fund was set up for the Territorial Government and wider powers in other areas of financial administration were introduced.

Meanwhile, in 1965, the Federal Government had appointed an Advisory Commission on the Development of Government in the Northwest Territories which travelled widely in the North to examine into the local needs for change. Following receipt of its recommendations in 1966, the Federal Government acted quickly to provide for a territorial administration resident in the Territories. Yellowknife was designated as the seat of territorial government.

Changes in Territorial Administration.—Unlike the Yukon Territory which has had its own public service since the turn of the century, the Government of the Northwest Territories, until recently, has been largely dependent upon the Federal Government for staff to implement its legislation and to operate its public services. This arrangement was dictated by circumstances as they existed after World War II. The Federal Government had a direct responsibility for the education and welfare of the large Indian and Eskimo populations and for the operation and support of the Territorial Government. Until 1963, the Deputy Minister of Northern Affairs (now Indian Affairs and Northern Development) was Commissioner, and the Northern Administration Branch of that Department was devoted to operating most government services in the Northwest Territories with federal public servants.

In 1963, a full-time Commissioner was appointed and charged with building up a territorial administration located initially in Ottawa but to move into the Territories as soon as possible. A Deputy Commissioner was appointed in 1965 and a territorial staff was gradually built up to administer the territorial finances and to conduct the Council sessions. In September 1967 the Commissioner and his staff of about 50 persons moved to Yellowknife and immediately assumed responsibility for the operation of the liquor system (already staffed by territorial contract employees), for the game management service, for municipal affairs and for the issuing of all licences and the collecting of taxes. Operational responsibility for other government services will be transferred from federal to territorial control as soon as possible; transfer in the Mackenzie District is scheduled for Apr. 1, 1969, and in the Eastern Arctic for Apr. 1, 1970. The Territorial Government is structured to carry out its administration through seven line and three service departments, each under the direction of a senior public servant reporting to the Deputy Commissioner.

Present Government Structure.—The Northwest Territories Act, 1952, as amended, provides for an executive, legislative and judicial structure. The Commissioner is the chief executive officer. He is appointed by the Federal Government and is responsible for the administration of the Territories under the direction of the Minister of Indian Affairs and Northern Development. In practice, all major policy decisions are taken on the advice of this Council. The Commissioner can spend funds only to the extent voted by Council and all new revenue measures are subject to the approval of Council. Normally, the Commissioner obtains prior federal approval of proposed legislative and budgetary measures before submitting them to Council. A Deputy Commissioner is the effective head of the territorial administration.

The Legislative Council of seven elected and five appointed members has a life of three years. It meets at least twice a year, usually for a period of three weeks but more often if required. The Commissioner presides over Council in Session and the Deputy Commissioner sits as an appointed member. A Clerk of Council and a Legal Adviser provide the main administrative assistance and debates are recorded verbatim.

The Northwest Territories Act gives the Territorial Council authority to legislate in most "provincial" areas of government activity except for natural resources (other than game); these are reserved to the Federal Government which alone can provide the necessary development funds. Council is conducted under rules which are an adaptation of federal parliamentary procedure. Legislation (ordinances) must receive three readings and have the assent of the Commissioner; he can reserve assent but this is a rare occurrence and the Federal Government may disallow any ordinance within two years. The Commissioner proposes most legislation but private members' Bills are allowed except for money matters which are the prerogative of the Commissioner. Besides draft legislation, the Council gives considerable time to policy papers in which the Commissioner asks for advice or seeks authority to take a particular course of action.

There is a full system of courts in the Territories, consisting of a territorial court, a police magistrate and numerous justices of the peace to serve the widely scattered settlements. Certain provincial superior courts have concurrent jurisdiction and there is a Court of Appeal which consists of the Justices of Appeal of Alberta and the Judges of the Yukon and the Northwest Territorial Courts. The Minister of Justice is the Attorney General of the Territories under the Criminal Code and the Department of Justice oversees the administration of justice in the Territories. The single Judge of the Territorial Court of the Northwest Territories is located at Yellowknife and goes on circuit to serve the northern and eastern portions of the Territories. The Judge of the Yukon Territorial Court is *ex officio* a judge of the court in the Northwest Territories. Law enforcement is provided by the Royal Canadian Mounted Police.

Continuing Federal Responsibility.—The Government Organization Act, 1966 charges the Minister of Indian Affairs and Northern Development with responsibility for the development of the North and for the general co-ordination of federal activities in the area. His responsibilities for the Territorial Government through the Northwest Territories Act have been described as has the operation of government services by the staff of his Department. Other Federal Government agencies, such as the Northern Health Service of the Department of National Health and Welfare and the Royal Canadian Mounted Police, are responsible for health and police services with the Territorial Government sharing their costs. The Department of Transport operates mainline airports throughout the whole of the North and the Canadian Broadcasting Corporation provides special shortwave northern broadcasts and maintains a growing number of local stations in the Territories. Federal cost-shared national assistance programs, within the competence of the Territorial Government, are available to it on the same conditions as to the provinces.

There are about 6,000 Indians and over 10,000 Eskimos in the Northwest Territories for whom the Federal Government has a special responsibility. Although there are no Indian reserves in the Territories, two treaties were entered into which established certain claims to land and certain other rights. As in the provinces, legislative authority with respect to Indians and lands reserved for Indians is vested exclusively in the Federal Government and this authority extends to Eskimos.

In addition to the many provincial-type services such as health and education operated by the Federal Government and for which the Territory pays in respect of residents other than Indians and Eskimos, it also provides extensive financial assistance to the Territorial Government under special federal-territorial financial agreements which have usually spanned a period of five years. These agreements serve both to allocate the financial responsibility of each government for the provision of services in the Territories and to fix the amount of the federal financial payments to the Territorial Government for the life of the agreement. At this stage of development, territorial revenues fall far short of meeting the expenditures of the Territorial Government. Under the financial agreements, all taxes on personal and corporate incomes, corporation taxes and succession duties are reserved to the Federal Government.

Excluding special accounts such as housing loans and amortization of borrowings for which individual arrangements are made, the Territorial Government, during the year ended Mar. 31, 1968, spent about \$12,500,000 on operating accounts and about \$5,200,000 on capital projects. Of these expenditures, approximately \$4,400,000 was raised within the Territories through taxes, licences and liquor revenues and a further \$2,400,000 was recovered under federal shared-cost programs. The remainder was provided by the Federal Government as special operating grants and loans under the financial agreement and under the special arrangements relating to the move to the Seat of Government; for the latter, the Federal Government provided \$2,950,000 for the two-year period ended Mar. 31, 1969.

Section 3.—Local Government*

Local government in Canada comprises all government entities created by the provinces and territories to provide services which they consider are better discharged through control at the local level than through that of the senior governments. Broadly speaking, local government provides protection to persons and property, public works, sanitation and waste removal, health, social welfare, education, recreation and community services for Canadians. In addition, local government, through the medium of government enterprises, may operate such facilities as transit, the supply of electricity and gas, telephone service and the like. Traditionally, the local administration of education has been kept separate from other forms of local government except in the Province of Alberta. The organization and administration of education is dealt with separately in this volume.

Many local government organizations antedate Confederation but under the British North America Act of 1867 local government was made a responsibility of the provincial legislatures, a responsibility subsequently extended to the territories when their governments were constituted in the present forms. The earliest form of local government, apart from the school board, was the municipality. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial or territorial legislatures. Some of these statutes apply to all municipalities within a province or territory, some to a certain type or group, and many to one municipality only.

Rapid and continuing urbanization during the past two decades and the demand for services in rural areas comparable to those obtainable in urban areas have placed great strains on local government. These strains have been aggravated by the inelasticity of the major local revenue source—the taxation of real property; at the same time, the small populations of most municipalities have hindered attempts to provide services that require economies of scale for efficient operation.

The provinces have taken a number of steps to assist local governments to meet these challenges. There has been a proliferation of special agencies, joint boards and commissions to provide certain services or parts of the services for groupings of municipalities. Local government revenue has been supplemented by grants from the provinces, either made unconditionally or for specific purposes. Certain functions traditionally assigned to local government have been resumed in whole or in part by the provinces, the most notable example being the assumption of the responsibility for justice, health, welfare and education by the provincial government in New Brunswick. Besides encouraging the amalgamation

* Prepared in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

of small units, the provinces have also established new levels of local government to discharge those functions that provide obvious examples of economies of scale. The establishment of the Municipality of Metropolitan Toronto in 1954 was followed by that of the Metropolitan Corporation of Greater Winnipeg in 1960. In 1967 British Columbia established regional districts to provide local government throughout the entire province for the first time. These regional districts, like the metropolitan governments, are superimposed on existing municipalities and are responsible for supplying services whose efficiency depends upon economies of scale which cannot be achieved by the individual municipalities. A very different program is under way in Newfoundland where the scattered population in the many outports is being encouraged and assisted to move to larger and more viable settlements.

The major local revenue source available to local governments is the taxation of real property, supplemented in varying degrees by taxation of personal property, business, amusement taxes, or sales taxes on specific commodities (see Chapter XXIII, Sect. 2, Subsect. 3). Revenue is also derived from licences, permits, rents, concessions, franchises and fines. A great many municipalities operate enterprises which sometimes provide surplus funds that may become available to help pay for other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of their enterprises.

Since a description of all forms of local government would be too complex for easy comprehension, the following paragraphs describe only municipal organization in each province and in the territories as at Jan. 1, 1968. Table 33, which gives the total number of each type of municipality in each province and territory, shows separately the number of all fully incorporated cities, towns, villages, and county and regional municipalities as well as municipalities in Census Metropolitan Areas. It should be noted that the five "borough" municipalities of Metropolitan Toronto have been included in the count of "cities". Municipalities in Quebec functioning under the name of "Ville de", such as Ville de Québec, Ville de Montréal and Ville de Laval, which are incorporated as cities, have been counted according to their incorporation.

Newfoundland.—The Province of Newfoundland has two cities—St. John's and Corner Brook. A number of the province's many settlements have been organized into 63 towns, four rural districts, 15 local improvement districts and 80 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Housing.

Prince Edward Island.—In this province, one city and seven towns have been incorporated under special Acts and 22 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province although it is divided into three counties which are subdivided into school sections having elected school boards. The organized municipalities are administered by the Department of Municipal Affairs.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the province. The three cities operate under special charters and special legislation. Thirty-nine towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which are regions and are not, in themselves, units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.—This province, as already noted, was fully reorganized as at Jan. 1, 1967. The municipal organization is now comprised of six cities, 21 towns and 87 villages; in addition, there are local service districts but these are not municipal organizations. The remainder of the province not municipally organized is administered by the Government of New Brunswick; municipalities are administered by the Department of Municipal Affairs.

Quebec.—The more thickly settled areas of Quebec, comprising about one third of the province, are organized into municipal divisions; the remaining two thirds is governed by the province as 'territories'. The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas and having little or no population. There are 302 villages and 1,099 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities and the 66 cities and 184 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

The active functions of the Montreal Metropolitan Corporation are limited mainly to servicing borrowings contracted before Apr. 1, 1961, when the Montreal Metropolitan Boulevard became a provincial responsibility, and to apportioning costs incurred in the area municipalities for streets constructed on each side of the Boulevard.

Ontario.—Slightly more than one tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 38 counties. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders. The municipal organization is comprised of one metropolitan municipality, five boroughs, 33 cities, 152 towns, 155 villages, 562 townships and 18 improvement districts. Some municipalities are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city and five boroughs. The Metropolitan Council is composed of the mayor, two senior controllers and the senior alderman of each of the nine wards of the City of Toronto and, for the five boroughs, the mayors, 13 controllers and two aldermen either designated by virtue of office or appointed by local councils. The chairman is elected by the councillors and need not be a councillor of an area municipality. The Council has jurisdiction over assessments, water supply, sewerage works, metropolitan road systems, transit, municipal housing developments, community planning, parks and recreation areas, the Court House, certain health and welfare services, the correlation of educational facilities in the metropolitan area, libraries, garbage disposal sites, low-rental housing, welfare assistance and ambulance service. It also controls a unified metropolitan police force and a metropolitan licensing commission. Expenditures are financed by a levy apportioned among the area municipalities. All borrowing of the area municipalities for capital purposes is done by the Municipality of Metropolitan Toronto.

Manitoba.—Manitoba has nine cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 36 towns, 40 villages and 110 rural municipalities under the

Municipal Act. There are 18 local government districts in settled areas not within municipalities where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

The Metropolitan Corporation of Greater Winnipeg has been in existence since Nov. 1, 1960. Its council is separate and distinct from those of the 16 area municipalities. The councillors are elected as individuals from ten districts, each containing approximately the same number of voters. The council has jurisdiction over planning, zoning, land development, assessments, arterial roads, water supply, sewage disposal, transit and other services. It borrows money only for its own undertakings and leaves to its area municipalities the responsibility for welfare, police, fire protection and other services. Expenditures are financed by a proportion of the business and other taxes levied on industrial or commercial property by the area municipalities and by a uniform levy on the equalized assessment of all taxable real property in the area municipalities.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 130 towns, 358 villages and 304 rural municipalities. The area so organized consists of most of the southern two fifths of the province; the remainder of this portion is administered for local purposes by the province in 10 unincorporated local improvement districts. The northern three fifths is sparsely populated and without local government, except for the corporation of Uranium City and District, although some municipal services are provided by the province through operation of the Northern Administration District. For the purpose of this presentation, Uranium City and District is included with the count of towns. Municipalities are supervised by the Department of Municipal Affairs.

Alberta.—The whole Province of Alberta is under some type of municipal organization. The province has an Act applying to each type of municipality and under these Acts the Department of Municipal Affairs supervises the 10 cities, 100 towns, 167 villages, 19 municipal districts and 30 counties; the latter administer schools as well as municipal services. Municipal government for the 46 improvement districts is provided by the Department of Municipal Affairs.

British Columbia.—As already noted, the Government of British Columbia instituted regional government in the province in 1967; as at Jan. 1, 1968, 25 of the proposed 29 regional districts had been established. The province has 31 cities, 13 towns, 56 villages and 40 districts; the latter are mostly rural municipalities although there are some districts adjacent to the principal cities of Victoria and Vancouver that are largely urban in character. It should be emphasized, however, that in British Columbia the application of the name 'city' is somewhat different from the commonly accepted meaning; because of their small size, perhaps one half of the 31 cities would not normally be incorporated as such in another province. Municipalities are supervised by the Department of Municipal Affairs.

In addition to the above types of municipalities, there are unincorporated improvement districts that have been set up to provide certain municipal services such as protection, waterworks, irrigation, etc. These districts are under the supervision of the Department of Lands, Forests, and Water Resources.

Yukon and Northwest Territories.—In the Yukon Territory there are two cities (Whitehorse and Dawson), one local improvement district (Watson Lake), and one unincorporated town (Mayo). In the Northwest Territories there are three towns (Yellowknife, Fort Smith and Hay River) and one village (Inuvik). The settlements of Pine Point and Fort Simpson have limited organization and are not as yet incorporated.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions Established.—Royal Commissions established up to June 30, 1967 under Part I of the Federal Inquiries Act are given in previous Year Books beginning with the 1940 edition. There were no such Commissions appointed between that date and Dec. 31, 1968, the closing date of this Chapter. Any Commissions established between the end of 1968 and the date of going to press of this publication will be found in the Register of Official Appointments, Chapter XXVII, Part III.

Reports of Federal Royal Commissions.—Reports of Federal Royal Commissions issued during the period July 1, 1967 to Dec. 31, 1968 were as follows:—

Report of the Royal Commission on Pilotage, established Nov. 1, 1962:

Part I (with Appendices), General Information: study of Canadian pilotage legislation and general recommendations. Ottawa, 1968. 584 p. \$5. (Cat. No. Z1-1962/2-1).

Part II, Study of Canadian pilotage: Pacific Coast and Churchill. Ottawa, 1968. 428 p. \$5. (Cat. No. Z1-1962/2-2).

Report of the Royal Commission on Bilingualism and Biculturalism, established July 19, 1963:

Vol. I, Official languages. Ottawa, 1967. 212 p. \$3. (Cat. No. Z1-1963/1-5/1).

Vol. II, Education. Ottawa, 1968. 350 p. \$4. (Cat. No. Z1-1963/1-5/2).

Provincial Royal Commissions.—The following provincial Royal Commissions were established during the period June 30, 1967 to Dec. 30, 1968:—

<u>Province and Nature of Commission</u>	<u>Chief Commissioner or Chairman</u>	<u>Date Established</u>
NEWFOUNDLAND		
St. Lawrence Mines.....	FINTAN J. AYLWARD.....	1967
Clarenceville Enquiry.....	H.G.R. MEWS.....	1968

ONTARIO		
To inquire into and report upon pollution in Haldi- mand County.....	W. E. WINEGARD.....	Jan. 11, 1968
To inquire into and report upon continuing the Farm Machinery Advisory Board and that its terms of reference be enlarged and that the function of the Board be to act in an advisory capacity in respect of all aspects of the farm machinery industry in Ontario.....	FRED COHOE-BURGESVILLE.....	Apr. 11, 1968
To inquire into and report upon Magistrate Freder- ick J. Bannon.....	HON. CAMPBELL GRANT.....	June 26, 1968
To inquire into and report upon Magistrate George W. Gardhouse.....	HON. CAMPBELL GRANT.....	June 26, 1968

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

Section 1.—Financial Administration*

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all federal taxing and appropriating measures must originate in the

* Prepared under the direction of H. R. Balls, Comptroller of the Treasury, in consultation with W. B. Brittain, Assistant Secretary of the Treasury Board, Ottawa.

House of Commons and all requests for grants must come from the Crown through responsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

Estimates and Appropriations.—The co-ordination of the Estimates process is carried out by the Treasury Board. This Board is a separate department of government, its Minister having the designation of President of the Treasury Board. In addition to the President, the Board consists of the Minister of Finance, who serves *ex officio* as a member, and four other Privy Councillors. Under the Financial Administration Act, the Board may act for the Privy Council in all matters relating to financial management including estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the public service and general administrative policy in the public service.

The Estimates for any one fiscal year are determined as a result of a two-phased review by the Treasury Board of departmental proposals for expenditure. In the spring of each year, at the request of the Secretary of the Treasury Board, each department submits to the Treasury Board a forecast of Estimates for the current and following four fiscal years. During the summer, a review of the programs giving rise to these Estimates forecasts is carried out by the Treasury Board as a result of which tentative Estimates figures are determined for each department for the coming fiscal year. The Board reviews each departmental program submission in the light of probable revenues and governmental policy generally, usually consulting the appropriate Minister and officials. Each department, using the figure resulting from this review as a guideline, develops in detail its manpower and other resource requirements and submits them to the Treasury Board late in October in the form of Main Estimates for the fiscal year beginning the following Apr. 1. These Estimates are analysed by the Treasury Board staff and compared with the guidelines determined during the spring program review. The Board reviews each departmental submission in the light of the current budgetary outlook. The Estimates may be rejected or reduced and unresolved differences of opinion may be referred to the Cabinet for decision. When the Board is satisfied with their substance and form, the Main Estimates are submitted to the Cabinet and later to the Governor in Council for approval and are then laid before the House of Commons.

On the motion of the President of the Privy Council, the Estimates of each department are initially referred for consideration to the appropriate standing committee of the House on or before Mar. 1. Under the standing orders, the House is deemed to have reported by May 31. The Government House Leader must give 48 hours notice of a motion for the House to concur in the Estimates that have been considered by the committee. The consideration of the Estimates usually extends over a period of several months. Each vote is the subject of a separate resolution and Members of the House may question the Minister on any item but no private Member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an Estimates item that would result in an increased expenditure. When the examination of the individual items has been completed, a resolution approving the granting of moneys is referred to a committee of the whole House. When such resolutions are passed, an appropriation Bill is introduced which, when approved by the House of Commons and the Senate, is given Royal Assent and becomes law. Grants in the Appropriation Acts are grants to the Crown and funds cannot be disbursed until the supply voted by Parliament to the Crown is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

As weeks or months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed, funds are made available for the conduct of government functions by the passage of an interim supply Bill granting one or more twelfths of

the total of each item in the Estimates. Additional interim supply Bills may be introduced if required, awaiting Parliament's detailed consideration of the Estimates. In addition, to cover any new and unforeseen requirements that might arise during the year, Supplementary Estimates may be introduced and just prior to the end of the fiscal year further Supplementary Estimates are laid before the House. These Supplementary Estimates are dealt with in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt, family allowances and old age assistance payments, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision also exists for the expenditure of public money in emergencies where no parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the President of the Treasury Board that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant must be published in the *Canada Gazette* within thirty days of issue and reported to Parliament within fifteen days of assembly. The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the Service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the Estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust accounts and annuity, insurance and pension accounts which the Government holds or administers, including the old age security fund and the Canada Pension Plan fund which are operated as separate entities. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

The Budget.—Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament at least one day prior to the presentation of the Budget, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for Supplementary Estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into committee, the debate on which may take up six sitting days. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been

approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

Revenues and Expenditures.—The administrative procedures whereby revenues are collected and expenditures made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. (Under the Government Organization Act, 1969, the Minister of Supply and Services is the Receiver General of Canada.) The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund are in excess of requirements for the immediate future they may be invested in interest-earning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The Treasury Board exercises detailed central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the annual consideration of departmental long-range program plans and the Estimates, the Board maintains continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, the Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price charged is reasonable or according to contract, together with such documents as may be required, are presented to the Receiver General, who makes the payment.

At the beginning of each fiscal year each department submits to the Treasury Board a division into allotments of each vote included in its Estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, commitments coming in course of payment within the year for which Parliament has provided or has been asked to provide appropriations are recorded and controlled by the departments concerned. (The Minister of Supply

and Services may perform these services on behalf of departments.) Records are maintained of commitments made under contract that will fall due in succeeding years, since the Government must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts payable prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Receiver General by cheque or other instrument in such form and authenticated in such manner as the Treasury Board may direct. In practice, such cheques or instruments are cleared daily by the chartered banks through the Bank of Canada to the Cheque Adjustment Division of the Receiver General, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

Public Debt.—In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

Accounts and Financial Statements.—Under the Financial Administration Act, and subject to regulations of the Treasury Board, the Receiver General requires accounts to be kept to show the revenues of Canada, the expenditures made under each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are shown on the statement of assets and liabilities at a nominal value of \$1.

Annually, on or before Dec. 31 or, if Parliament is not then sitting, within any of the first fifteen days next thereafter that Parliament is sitting, the *Public Accounts*, prepared by the Receiver General, is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year ended the previous Mar. 31, statements of the revenues and expenditures for that year and of the assets and direct and contingent liabilities as at the end of that year, together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. Monthly financial statements are also published in the *Canada Gazette*.

The Auditor General.—The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the Comptroller of the Treasury. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

Public Accounts Committee.—It is the usual practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons, which may review them and report its findings and recommendations to the House of Commons.

Section 2.—Departments, Boards, Commissions, etc.

The short sketches of the various departments of government and of the special boards and commissions connected with the work of government usually given in this Section of the Year Book are, in this edition, carried in an Appendix. In mid-1968, the Government announced the intended creation of three new departments as well as a major re-organization of several existing departments. At the time this Chapter was in preparation, these changes were under way but not yet consolidated or official. The Appendix and the accompanying organization chart bring the information up to the latest possible date before going to press.

Section 3.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

THE GOVERNMENT OF CANADA

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation—departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. The following departmental corporations are listed in Schedule B to the Financial Administration Act:—

- Agricultural Stabilization Board (formerly Agricultural Prices Support Board)
- Atlantic Development Board
- Atomic Energy Control Board
- Director of Soldier Settlement
- The Director, The Veterans' Land Act
- Dominion Coal Board
- Economic Council of Canada
- Fisheries Prices Support Board
- Municipal Development and Loan Board
- National Gallery of Canada
- National Research Council
- Unemployment Insurance Commission.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act:—

- Atomic Energy of Canada Limited
- Canadian Arsenal Limited
- Canadian Commercial Corporation
- Canadian Dairy Commission
- Canadian Livestock Feed Board
- Canadian National (West Indies) Steamships Limited (virtually inoperative)
- Canadian Patents and Development Limited
- Centennial Commission
- Crown Assets Disposal Corporation
- Defence Construction (1951) Limited
- National Battlefields Commission
- National Capital Commission (formerly Federal District Commission)
- National Harbours Board
- Northern Canada Power Commission.

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the Science Council of Canada (assented to May 12, 1966), the Company of Young Canadians (assented to July 11, 1966) and the National Arts Centre Corporation (assented to July 15, 1966). See also the Appendix to this volume.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act:—

- Air Canada (formerly Trans-Canada Air Lines)
- Canada Deposit Insurance Corporation
- Canadian Broadcasting Corporation
- Canadian Overseas Telecommunication Corporation
- Cape Breton Development Corporation
- Central Mortgage and Housing Corporation
- Eldorado Aviation Limited
- Eldorado Mining and Refining Limited
- Export Credits Insurance Corporation
- Farm Credit Corporation (formerly Canadian Farm Loan Board)
- National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
- Northern Transportation Company Limited
- Polymer Corporation Limited
- St. Lawrence Seaway Authority
- Seaway International Bridge Corporation Limited (formerly Cornwall International Bridge Company Limited), subsidiary to the St. Lawrence Seaway Authority.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act, although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in an Appendix to this volume, following the short sketches of the establishment and functions of the various departments of government, boards, commissions, etc. The reason for this is explained on p. 108.

Section 4.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament may be obtained from the Queen's Printer, Ottawa, at prices of from 15 cents and up, according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered by the Departments given.

Department, Year and Chapter of Statute	Name of Act	Department, Year and Chapter of Statute	Name of Act
Agriculture—		Consumer and Cor- porate Affairs—

PART IV.—FEDERAL AND PROVINCIAL GOVERNMENT EMPLOYMENT

Federal Government Employment

The former Civil Service Commission became the Public Service Commission with the proclamation of the Public Service Employment Act on Mar. 13, 1967. Under this Act the Commission retains its status as an independent body responsible to Parliament for the appointment of qualified persons to or from within the public service and for the operation of staff training and development programs. It may establish boards to consider appeals against selections for appointments made from within the public service, to make recommendations on the delegation of its authority, and to inquire into allegations of political partisanship. The Commission's jurisdiction is extended to include a number of persons not covered by the former Civil Service Act. It is also given the prerogative of making extensive delegation of its authority to deputy heads to perform any of its powers, functions or duties, except those relating to appeals.

Under the amended Financial Administration Act and the Public Service Staff Relations Act, both of which were also proclaimed on Mar. 13, 1967, the Treasury Board is made responsible for the development of regulations, policies and standards governing all other aspects of personnel management in the public service including classification and pay, conditions of employment, collective bargaining and staff relations, organization and establishments, and manpower development and utilization.

Staffing.—The Commission continues to perform its important role as guardian of the merit principle while ensuring the high quality of people within the service. Every citizen has the opportunity of competing for positions in the service of his country. Ordinarily, any Canadian citizen may apply for headquarters positions at Ottawa but applicants for local positions in the administrative support or operational categories who are residents of the locality in which the vacancy occurs are given preference. Competitive examinations are announced through the press and other news media and through posters displayed on public notice boards of the larger post offices, offices of the Canada Manpower Centres, offices of the Public Service Commission and elsewhere.

The Commission's major task—staffing the public service according to merit—is done on an occupational basis. This is consistent with the revised classification system that divides the service into six broad occupational categories which are further divided into groups of occupationally similar jobs. For each major occupation or group of occupations, there is a program of development, recruitment, selection and placement. The activities are operated on the basis of comprehensive manpower planning including regular appraisals of employees, planned rotation, development and continuous recruitment techniques.

The new legislation provides the flexibility needed for the revised approach to government administration whereby competent managers should be allowed to manage and should be held accountable for their decisions. To facilitate staffing under this concept of management, the Commission may delegate any of its authority, except for appeals, to deputy heads wherever practical, and they in turn may delegate this authority with the approval of the Commission. Plans are under way to establish the proper conditions for delegation and to implement the actual delegation of authority. The Commission must report to Parliament on delegation and changes in this delegation.

Staffing operations for the administrative support and operational categories are decentralized to the regional and local levels. But operations remain centralized primarily for employees in executive positions, for most administrative occupations in a number of departments and for specialized or professional employees, so that they may be employed effectively across the service throughout their careers.

Appointments are made from within the service except where the Commission believes it is in the best interests of the service to do otherwise. Selection is made by competition or other processes of personnel selection designed to establish the relative merit of the candidates.

Competitions may be open to the public and to everyone in the public service or they may be limited to all or to a part of the service; the latter are referred to as closed competitions. Examinations for selection may be written, oral, a demonstration of skill or any combination of these. By these techniques, qualified candidates are placed on eligible lists which are valid for periods determined by the Commission. Appointments may be made from an eligible list for positions of a similar occupational nature and level. Closed competitions for promotion are generally conducted by the departmental staffing officers under work-sharing arrangements with the Commission. The Commission remains in touch with the departments to advise and instruct them in the administration of the Public Service Employment Act and its regulations.

Other processes used for appointments include continuous staffing and appraisals. The former is used when there is a recurring demand within an occupational group or there is some specialization within a group. Applications are reviewed and candidates are called for interview. The records of those who are not immediately called or appointed are put into a manpower inventory. This inventory is reviewed when a vacancy occurs and a group of those in the inventory who are best qualified for that position are considered for the appointment. Within the service, employees are regularly appraised to determine what training and development may be needed, to plan careers, and to decide promotions or transfers on the basis of performance and qualifications.

Appeals.—Under the Act, public servants who are candidates in a competition open to all or part of the service may appeal the results of that competition to the Commission, except where no candidate is successful. When a promotion is made without competition, those who would have been eligible to apply if a competition had been held may appeal. Public servants may also appeal a recommendation from a deputy head for their demotion or release because of incompetence or incapacity.

Training and Development.—Consistent with the growing emphasis on managerial development and continuing education, the Commission offers interdepartmental courses in government administration, occupational training and management improvement. The Commission acts as the consultant and adviser to deputy heads on training matters and the training and development facilities of the Commission are available to employees to train them for specific occupations or for promotion within the administrative and managerial ranks.

Language.—The Commission has responsibilities concerning the requirements for bilingualism and biculturalism in the public service. It operates language training schools and carries out research and development to achieve various levels of proficiency needed by public servants. It is developing bilingual skills of senior executives so they may perform their duties effectively in either English or French. The program for this development gives these executives a sufficient appreciation of English and French cultures so they may use this understanding when developing and carrying out policy. The Commission also provides departments and agencies with advice and monitors the way in which language-usage policy is put to use.

Statistics of Federal Government Employment.*—The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departments and departmental corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 5 cover employees in the first category and Table 6 covers employees in the second category.

* Prepared in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

Departments and Departmental Corporations.—The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, although paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departments and departmental corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in the *Estimates of Canada*, or are established by means of supplementary Treasury Board Minutes. Thus, this category of employees includes persons subject to the provisions of the Public Service Employment Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Public Service Employment Act.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage

rates for similar work in the area in which the individual is employed; these employees are subject to the provisions of the Public Service Employment Act. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a non-continuing basis.

3.—Employees in Departments and Departmental Corporations and Payrolls, by Month, April 1967 to March 1968

Table 4 presents metropolitan area data on staff employed in departments and departmental corporations. The 19 areas listed include the 16 metropolitan areas defined for purposes of the 1966 Census of population, plus the cities of Calgary, Regina and Saskatoon where the city and metropolitan area boundaries are the same. Included are employees who work within the boundaries of the metropolitan areas; employees residing within those areas but working outside are excluded.

Table 5 presents statistics for departments and departmental corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

This Section previously included a table giving employee and payroll data classified by departmental branches, services and corporations as organized at the end of the latest fiscal year. However, because of the extensive changes taking place in the organization

5.—Departments and Departmental Corporations classified by Function, Persons Employed as at Mar. 31, 1968, and Regular Payrolls for the Year Ended Mar. 31, 1968

¹ Excludes payments of \$18,528,900 from postal revenues to approximately 8,520 postmasters and assistant postmasters.

² Excludes payments to the Governor General and Lieutenant-Governors for Christmas 1967.

³ Excludes payments of \$71,600 to part-time weather observers.

⁴ Excludes payments to the Prime Minister, Speakers of the Senate and the House of Commons, Deputy Speaker of the House of Commons and Parliamentary Assistants) \$502,500.

⁵ Includes payments of \$5,764 to prevailing rate employees, \$2,486 to ships' employees and \$1,079 to casuals, which amounts are excluded from the function detail to avoid revealing particulars relating to individuals.

⁶ Excludes payments of \$4,578,600 to "helpers".

of a number of departments during 1967-68, this classification does not appear in the current edition; monthly figures on both the functional and departmental bases are available in DBS publication *Federal Government Employment* (Cat. No. 72-004).

Agency and Proprietary Corporations and Other Agencies.—The following organizations owned by the Federal Government as at Mar. 31, 1968 are included under this heading. Employees and earnings are shown by month in Table 6; a provincial distribution of employees and a summary of the total payroll in each of the three groups is given in Table 1, p. 117.

Agency Corporations

Atomic Energy of Canada Limited
Canadian Arsenals Limited
Centennial Commission
Crown Assets Disposal Corporation
Defence Construction (1951) Limited

National Battlefields Commission
National Capital Commission
National Harbours Board
Northern Canada Power Commission

Proprietary Corporations

Air Canada
Canadian Broadcasting Corporation
Canadian National Railways
Canadian Overseas Telecommunication Corporation
Central Mortgage and Housing Corporation
Eldorado Aviation Limited
Eldorado Nuclear Limited

Export Credits Insurance Corporation
Farm Credit Corporation
Northern Transportation Company Limited
Polymer Corporation Limited
St. Lawrence Seaway Authority
Seaway International Bridge Corporation Limited

Other Agencies

Atlantic Development Board
Bank of Canada
Canadian Wheat Board

Industrial Development Bank
Canadian Corporation for the 1967 World Exhibition
Office of the Custodian of Enemy Property

Provincial Government Employment

Table 7 shows gross payrolls (including retroactive pay, salary adjustments and over-time payments) of provincial government employees, exclusive of those for British Columbia, for the month of March 1968. Provincial government payrolls for the whole of the year ended Mar. 31, 1968 amounted to \$1,687,137,000, payrolls for departmental services employees amounted to \$999,677,000 and accounted for 59.2 p.c. of the total, those of institutions of higher education received \$191,684,000 or 11.4 p.c., those of provincial government enterprises \$475,361,000 or 28.2 p.c., and those of workmen's compensation boards \$20,415,000 or 1.2 p.c.

The only data available for British Columbia and included in the table are for employees of institutions of higher education.

PART V.—CANADA'S EXTERNAL RELATIONS*

Section 1.—Canada's International Status

The growth of Canada's international status is reflected in the development of the Department of External Affairs. From Confederation until 1914, Canada's position in the British Empire was essentially that of a self-governing colony, whose external relations were directed and controlled by the Imperial Government in Great Britain. Canada's first efforts concerning its own external relations, in the early 1900s, merely took the form of creating improved administrative machinery at home. In 1909, Parliament authorized the establishment of a "Department of External Affairs" placing it under the

* Prepared (December 1968) by the Department of External Affairs, Ottawa.

Secretary of State, with an Under-Secretary of State for External Affairs to rank as the permanent deputy head of the Department. The title of the Department indicated that it was to deal with Canada's relations with other governments within the British Empire as well as with foreign powers but its establishment brought no constitutional change. In 1912, the Department was placed directly under the Prime Minister who held the additional portfolio of Secretary of State for External Affairs and this situation obtained until 1946 when the first separate Secretary of State for External Affairs was appointed.

The Department began with a modest staff consisting of the Under-Secretary and six clerks. In 1912 an Assistant Under-Secretary was added, and in 1913 a Legal Adviser. Before the establishment of the Department, a High Commissioner had been appointed to represent Canada in London (from 1880) and an Agent-General in France (from 1882), and Canada, in the closing years of the nineteenth century, was also represented abroad by trade commissioners and immigration officials. However, none of these officials had diplomatic status. Negotiations with foreign countries were conducted through the British Foreign Office and dealings with other parts of the Empire through the Colonial Office, with Canadian representatives frequently included in negotiations. Canadian interests abroad were handled by British diplomatic and consular authorities and all Canadian communications to other governments were made through the Governor General.

The gradual recognition of Canadian autonomy in international affairs and the growth of Canadian responsibilities abroad made expansion of services and representation inevitable. After 1920, it became increasingly apparent that Canada's interests could no longer be conveniently handled by the British diplomatic and consular authorities and the Department began to develop into an agency for the direct administration of Canada's external affairs. In 1921, the Office of the High Commissioner in London was placed under its direct control. In 1925, a Canadian Advisory Officer was appointed in Geneva to represent Canada at various conferences and League of Nations Assemblies and to keep the Canadian Government informed of the activities of the League and of the International Labour Office. In 1926, a Canadian Minister was appointed to Washington.

An advance of the first importance in the Department's development came as a result of an agreement reached at the Imperial Conference of 1926 by which the Governor General ceased to represent the British Government and became solely the personal representative of the Sovereign. This brought about two changes: as the British Government was now without a representative in Canada, it appointed, in 1928, a High Commissioner to represent it at Ottawa; and after July 1, 1927, correspondence from the Dominions Office in London and from foreign governments was directed to the Secretary of State for External Affairs instead of to the Governor General.

In 1928, the former Agent-General in Paris was appointed Minister to France and, in 1929, a legation was opened in Tokyo. At about the same time, the United States, France and Japan opened legations in Ottawa. The expansion of the service was then interrupted by the depression of the 1930s and the next step in the exchange of diplomatic representatives with other countries was taken when Belgium sent a Minister to Ottawa in 1937 and Canada, in 1939, established legations in Belgium and The Netherlands.

With the outbreak of the Second World War, it became imperative that Canada have closer and more direct contact with other governments of the Commonwealth, with the Allied governments and with certain other foreign governments. The day after Canada's separate declaration of war on Sept. 10, 1939, it was announced that the Canadian Government would send High Commissioners to Australia, New Zealand, South Africa and Ireland, and these governments reciprocated. The appointment in 1941 of a High Commissioner to Newfoundland recognized the importance of that country to the defence of Canada. In 1941, by reciprocal agreement, Canada appointed Ministers to the U.S.S.R. and China. During the War, a single Canadian Minister was accredited to a number of Allied governments then functioning in London or Cairo—those of Belgium, The Netherlands, Czechoslovakia, Greece, Norway, Poland and Yugoslavia, and Canada received

Ministers from each of these governments. After the liberation of France, this Minister, following a period in Algiers as representative to the French Committee of National Liberation, moved to Paris with the rank of Ambassador.

Another wartime development was the establishment of diplomatic relations with Latin America. In 1941, Canadian legations were opened in Brazil and the Argentine Republic (the Minister to the latter being also accredited in 1941 to Chile), and these countries sent their first Ministers to Ottawa. Diplomatic representatives were sent to Mexico and Peru in 1944 and to Cuba in 1945. Canada now has diplomatic relations with all countries in Latin America and, because of developing ties with that area, a separate political division devoted to Latin America was set up in the Department in 1960.

Canada's external affairs services continued to expand following the War. Embassies were opened in a number of countries and, after 1947, High Commissioners were accredited to India and Pakistan and subsequently to Jamaica, Malaysia, Nigeria, Sierra Leone, Tanzania, Trinidad and Tobago, Uganda, Kenya and Malta.

Membership in the United Nations has increased Canada's responsibilities outside its own borders and Canada has been represented on various organs of the UN since its formation in San Francisco in 1945. A Permanent Canadian Delegation was established in New York in 1948 and a year later a Canadian office was opened in Geneva, the European headquarters of the organization. These offices, now called Permanent Missions, have since been expanded. Canada was one of the founding members of the North Atlantic Treaty Organization in 1949 and has been active in the Organization throughout the years of its existence. In 1952, on the establishment of a NATO Permanent Council, a Canadian Permanent Delegation was set up in Paris (since moved to Brussels) to represent Canada's NATO interest. There is also in Paris a Canadian Permanent Delegation to the Organization for Economic Co-operation and Development. In addition to representing Canada on these permanent international bodies and their various committees, officials of the Department of External Affairs have been members of Canadian delegations at many international conferences in recent years.

Today, Canada conducts its external relations with some 108 countries. Diplomatic representation abroad and representation of other countries in Canada is given in Section 2 following, and Section 3 reports Canada's main international activities during 1967 and 1968. A brief review of the present functions and organization of the Department of External Affairs is given in the Appendix to this volume; a broader coverage may be found in the monthly bulletin *External Affairs* (Queen's Printer, Ottawa, \$2 per year) and in the Annual Report of the Department.

Section 2.—Diplomatic Representation as at Dec. 31, 1968

NOTE.—Changes in this listing subsequent to Dec. 31, 1968 and names of current representatives are given in *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published thrice yearly and obtainable from the Queen's Printer, Ottawa, price 60 cents per copy.

1.—Canadian Representation Abroad

Country and Year Representation Established	Present Status of Representative	Address

Section 3.—International Activities, 1967-68

Subsection 1.—Canada and the Commonwealth

The Commonwealth today has been transformed basically from the compact and like-minded family of nations of predominantly European stock which constituted the Commonwealth association from the enactment of the Statute of Westminster in 1931 to 1947. With its present membership of 28 sovereign states covering about one quarter of the earth's land surface, representing close to 850,000,000 people of many colours, creeds and languages, and including both economically developed and under-developed countries as well as governments committed and uncommitted in the international power groupings, the Commonwealth more accurately reflects the world over which it spreads so widely. The interests of its members extend to all continents and the variety of problems demanding their attention has greatly increased in scarcely more than a decade.

Commonwealth members are enumerated according to the year (if post-1931, noted in brackets) when membership was proclaimed: Britain; Canada; Australia; New Zealand; India (1947); Pakistan (1947); Ceylon (1948); Ghana (1957); Malaya (1957); Nigeria (1960); Cyprus (1961); Sierra Leone (1961); Tanganyika (1961); Jamaica (1962); Trinidad and Tobago (1962); Uganda (1962); Kenya (1963); Malawi (1964); Malta (1964); Zambia (1964); The Gambia (1965); Singapore (1965); Guyana (1966); Botswana (1966); Lesotho (1966); Barbados (1966); Mauritius (1968); and Swaziland (1968). Early in 1964, Tanganyika joined Zanzibar to form the United Republic of Tanzania. When Singapore, Sarawak and Sabah joined the Federation in September 1963, Malaya became Malaysia; Singapore separated from Malaysia in August 1965.

The Commonwealth Secretariat, established by a 1965 decision of Prime Ministers, has its headquarters at Marlborough House, London. Its first Secretary-General is Mr.

Arnold Smith, a Canadian. The Secretariat has the responsibility of organizing and servicing official Commonwealth conferences; it facilitates the exchange of information between member countries and generally stands at the service of all Commonwealth governments as a visible symbol of the spirit of co-operation which animates the Commonwealth. The Secretariat of the former Commonwealth Economic Committee and the Commonwealth Education Liaison Unit, both based in London, were amalgamated with the Secretariat at the end of 1966, and their first integrated budget was approved by Commonwealth Governments in 1967. It was decided that a scientific adviser should be appointed to the Secretariat and that the appointee would also act as Secretary to the Commonwealth Scientific Committee in London. A Canadian, Dr. Robert Glen, formerly Assistant Deputy Minister of Agriculture, took up this appointment in April 1968.

Membership in the Commonwealth is one of the fundamental aspects of Canadian foreign policy. Canada has supported the extension and development of a strong Commonwealth, capable of exerting significant influence for international peace and progress. Commonwealth ties give Canada a special relationship with this group of nations which, despite the diversity of their backgrounds, share important ideals and traditions in common. Commonwealth ties are characterized in the main by a spirit of co-operation developed through consultation and exchange of views. These are continuous not only in Commonwealth capitals but in other countries and also at United Nations and other international gatherings.

In addition to these continuing exchanges at many levels, special meetings are convened for the purpose of discussing and co-ordinating the interests of Commonwealth members in various special fields, and to review international developments in the Commonwealth context. Heads of Government (Prime Ministers and Presidents) did not meet in 1967 or 1968 but other meetings in 1967 included those of the Finance Ministers and Chief Justices in Trinidad, the Communications Council in London and Sydney, Australia, Survey Officers and Auditors-General in London, Forestry experts in New Delhi, India, and the Commonwealth Parliamentary Association in Kampala, Uganda. Meetings in 1968 included the Broadcasting Conference in Wellington, New Zealand, the Education Conference in Lagos, Nigeria, Finance Ministers in London, the Forestry Conference in New Delhi, the Medical Conference in Kampala, the Conference on Mathematics in Schools in Trinidad, the Scientific Committee in Karachi and the Telecommunications Council in Montreal.

Canada's external aid for developing countries continued to be directed, in the main, to Commonwealth countries through the Colombo Plan, the Special Commonwealth Africa Assistance Plan (SCAAP), and the Canadian program for Commonwealth Caribbean assistance. Canada's total contribution under the Colombo Plan since its inception exceeds \$980,000,000. (See pp. 148-151.)

Canada is an active participant in the Commonwealth Scholarship and Fellowship Plan (see also p. 150), contributing \$1,300,000 in 1968-69. During the 1967-68 academic year, Canada received 204 students under this Plan, the majority from developing countries. Canada is also playing a significant part in the training and provision of teachers for service in Commonwealth countries and assisting in plans for co-operation in technical education. During the academic year 1967-68, there were over 500 Canadian teachers and university professors serving under Canadian Government aid programs in the less-developed countries of Southeast Asia, Africa and the Caribbean area, a very substantial proportion of them in Commonwealth countries.

Subsection 2.—Francophonie

Heir to the great traditions of the French language and culture, Canada is also contributing fully to the establishment of special links between francophone countries. Its bilateral relations with France have developed greatly in recent years through political consultations, parliamentary visits, cultural and scientific exchanges, increased trade, officer exchanges, defence production co-operation, and the like. Links with other French-speaking countries have also been strengthened by the establishment of diplomatic missions

and developing exchanges in a number of fields. A growing proportion of Canadian economic aid has been directed to francophone countries in Africa (see p. 150). Canada is taking part in current endeavours to develop multilateral co-operation between French-speaking countries, a policy based on the recognition of the value to Canada of its ties with a multi-racial community of some 30 countries with 150,000,000 inhabitants, linked together by French culture.

Subsection 3.—Canada and the United Nations

Firm support for the United Nations is an essential element of Canadian foreign policy. Canada has contributed over the years to the efforts of the organization to keep the peace in various parts of the world, including the Middle East, Kashmir, the Congo, West Irian and Cyprus. In the 1956 Middle East crisis, Canada played a significant role in the establishment of the United Nations Emergency Force and participated in the Force until its withdrawal in 1967. In 1960, Canada responded to a UN request for support of its operations in the Congo by supplying military and civilian specialists and by pledging political and financial support. In 1962, Canada provided aircraft, pilots and maintenance crews to assist the United Nations Temporary Executive Authority (UNTEA) in the exercise of its peacekeeping functions in West Irian. Canada maintains a large contingent in Cyprus (UNFICYP) to assist the UN to prevent open fighting between the Greek and Turkish communities. Canada has consistently advocated the strengthening of the peacekeeping capacity of the UN by means of advance planning at UN headquarters and advance cost-sharing arrangements and has taken steps to improve the readiness of its own forces and urged that others be invited to do the same. Despite slow progress and occasional setbacks, Canada continues to believe that the UN has an important role to play in the maintenance of international peace and security.

Canada also participates directly in the work of the UN through its membership in various UN bodies including all of the 13 specialized agencies and the International Atomic Energy Agency. The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the UN with headquarters in Canada.

In 1967, Canada completed a three-year term on the Economic and Social Council but continues as a member of most of the important subsidiary bodies of the Council such as the Economic Commission for Latin America, the Committee for Programme and Coordination, the Inter-Governmental Committee of the UN/FAO World Food Programme, the Commission on Social Development, the Statistical Commission, the Commission on Narcotic Drugs and the Committee on Housing, Building and Planning.

Canada also serves on the Governing Council of the United Nations Development Programme (UNDP) and the Industrial Development Board of the United Nations Industrial Development Organization (UNIDO). Canada participates directly on the Executive Committee of the Office of the United Nations Children's Fund (UNICEF), the Trade and Development Board of the United Nations Conference on Trade and Development (UNCTAD) and the Executive Committee of the Office of the United Nations High Commissioner for Refugees (since the Second World War, Canada has received approximately 350,000 refugees from overseas).

Canada belongs to 16 subsidiary bodies of the General Assembly, including the Committee on the Peaceful Uses of Outer Space, the Disarmament Commission, the Special Committee on Peacekeeping Operations and the United Nations Scientific Committee on the Effects of Atomic Radiation. Canada maintains Permanent Missions at both UN headquarters in New York and at the European Office of the organization in Geneva.

Canada pays 3.02 p.c. of the organization's regular budget and is the eighth largest contributor. In the year ended Mar. 31, 1968, Canada's share of the gross expenses of \$152,950,000 (Cdn.) was approximately \$3,795,000. The cost to Canada of maintaining its contingent in Cyprus was about \$2,000,000 in 1967. In addition, Canada makes voluntary contributions to special UN programs such as the United Nations Development Programme (UNDP), the United Nations High Commissioner for Refugees (UNHCR),

the United Nations Children's Fund (UNICEF), the United Nations Relief and Works Agency in the Middle East (UNRWA) and the World Food Programme (WFP).

Canada's total assessment and contributions to the UN, its Specialized Agencies and related bodies totalled approximately \$378,000,000 during the period 1945-68 and about \$39,000,000 in 1967. In 1967, Canada's quota (assessed share of capital) for the International Bank for Reconstruction and Development (IBRD) and the International Monetary Fund (IMF) was increased about \$45,405,000, of which some \$4,540,000 was paid during 1967. The Canadian subscription to the IBRD now totals \$856,215,150.

Canada will complete a two-year term on the Security Council on Dec. 31, 1968, having previously served in 1947-48 and 1958-59.

Canadian Financial Contributions to the United Nations.—Canada's contributions to the United Nations system as at Mar. 31, 1968 were as follows:—

<i>Agency</i>	<i>Percentage Assessment or Voluntary Contribution (V)</i>	<i>Contribution (Cdn. \$)</i>
United Nations—

United Nations Association in Canada.....	V	17,000

¹ UNEF was withdrawn in June 1967. The amount indicated was paid as an advance for the 1967 cost of the force on Apr. 14, 1967. The exact costs of the force until its withdrawal have not as yet been determined. ² Estimated.

This figure from March 1967 to March 1968 represents the cost to Canada of maintaining its contingent in Cyprus after reimbursement for certain expenses by the United Nations; it does not include salaries and similar costs that Canada would have had to pay if the personnel had remained in Canada.

³ The UNDP was formed by the consolidation of the Expanded Programme of Technical Assistance (EPTA) and the Special Fund according to the terms of Resolution 2029 (XX) of Nov. 22, 1965. ⁴ Canada also contributed \$6,567 as its share of the costs of the UPU English Translation Service.

⁵ The third instalment of Canada's supplementary contribution to the first replenishment of IDA. The total Canadian contribution to IDA, including supplementary contributions, is \$85,000,000.

⁶ In 1966 there was a special 1-p.c. increase in the Canadian quota and subscription to the IMF and the IBRD. This brought the totals in both institutions to \$856,000,000, of which 10 p.c., or \$85,600,000, is paid in.

Specialized Agencies.—Canada is a member of each of the 13 Specialized Agencies of the UN. Additionally, Canada holds membership in the International Atomic Energy Agency (IAEA), an autonomous international organization under the aegis of the UN. These Agencies are invested with wide international responsibilities established by inter-governmental agreement, and act in relationship with the UN to assist in carrying out the terms of the Charter. Co-ordination of activities of the Agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. This Committee is composed of the Secretary General of the UN, the executive heads of the Specialized Agencies, the Director General of the IAEA and other high officials of the UN. It considers common administrative questions, inter-agency program co-ordination and projects or problems of special urgency to be undertaken jointly by several Agencies. The Agencies also report annually to the Economic and Social Council of the UN.

International Labour Organization.—The International Labour Organization (ILO) was originally established with the League of Nations in 1919 and became a Specialized Agency of the UN in 1946. It brings together representatives of governments, employers and workers from 118 (1967) member states in an attempt to promote social justice by improving living and working conditions in all parts of the world. The ILO is responsible for a number of technical programs financed by the United Nations Development Programme, as well as training programs under its regular budget. To further its work, the ILO holds numerous meetings during the year as well as an annual International Labour Conference in Geneva each June. At the 52nd session of the Conference in June 1968 the principal debate focused on the ILO's role in the field of human rights.

Food and Agriculture Organization.—The Food and Agriculture Organization (FAO) came into being in 1945, the first Conference being held in that year in Quebec City. It now has 117 members. The objectives of the Organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food and agricultural, fishery and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action. A Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the Organization, meets every other year. Headquarters are in Rome, Italy.

Canada has participated actively in FAO activities and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposals, the FAO Group on Grains, the North American Forestry Commission and other FAO bodies. A number of Canadians are on the staff at Rome headquarters and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the Organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government departments (the Canadian Interdepartmental FAO Committee) maintains liaison between the FAO Secretariat and the Canadian Government.

The World Food Programme first began operations on a three-year experimental basis at the beginning of 1963 under the joint auspices of the FAO and the UN. The Programme provides food aid on a multilateral basis for emergency relief and promotes economic and social development, including feeding of children. At a UN-FAO Pledging Conference in New York in January 1968, \$161,300,000 was pledged toward a two-year program (1969-70). Canada, with a pledge of \$20,000,000, is the second largest supporter of the Programme.

World Health Organization.—The World Health Organization (WHO) came into being in 1948 and is one of the largest of the Specialized Agencies of the UN, having a total membership of 127. Functioning through the World Health Assembly (an organization composed of an Executive Board, a Secretariat and six regional committees), WHO acts

as a directing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The 21st World Health Assembly was held in Geneva in May 1968. (See also Subsect. 9, Sect. 1, Part I of Chapter VI on Health, Welfare and Social Security.)

United Nations Educational, Scientific and Cultural Organization.—The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 “to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms”. Its headquarters is in Paris and total membership at the end of 1967 was 122 states.

The Organization is made up of three principal organs—the General Conference which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The 14th Session of the General Conference was held in Paris in October and November 1966. It approved a budget of \$61,500,000, giving priority to the educational needs of the developing countries and to science activities, particularly of the application of science to development; the Canadian assessment rate is 2.97. Further information about the Organization may be obtained from the Canadian National Commission for UNESCO, Ottawa.

International Civil Aviation Organization.—The ICAO, with headquarters in Montreal, is the only Specialized Agency of the UN with headquarters in Canada. It was established to study problems of international civil aviation and the establishment of international standards and regulations for civil aviation. ICAO operations are conducted through its Assembly, Council Committees and Secretariat. Canada has been a member of the 27-nation Council, the governing body of ICAO, since its inception in 1947. The Assembly, consisting of all member states, is convened at least once in a three-year period to decide on policy and vote on the budget. The 16th Session of the Assembly was held in Buenos Aires, Argentina, in September 1968.

International Telecommunication Union.—Canada is a member of the International Telecommunication Union (ITU), which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The ITU is concerned with the maintenance of international co-operation for the improvement and use of telecommunications of all kinds for the benefit of the general public. It has 129 member countries. The International Telecommunication Convention which was adopted by the Plenipotentiary Conference of the Union at Montreux, Switzerland, in 1965 came into force on Jan. 1, 1967. Canada is represented on the 29-member Administrative Council, the executive organ of the ITU.

World Meteorological Organization.—Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the UN since 1951 but developed from the International Meteorological Organization founded in 1878. The membership in 1967 was 131. The Fifth World Meteorological Congress, held in Geneva in April 1967, approved a program for the development of an improved world-wide meteorological system which was given the name “World Weather Watch”. Canada is a member of the Executive Committee of the Organization.

Inter-Governmental Maritime Consultative Organization.—The Inter-Governmental Maritime Consultative Organization (IMCO) was established in 1959 to promote international co-operation on technical shipping problems and the adoption of the highest standards of safety and navigation and has a membership of 65 (1967). IMCO exercises bureau functions for International Conventions on Safety of Life at Sea, Prevention of Pollution of the Sea by Oil and Facilitation of International Maritime Traffic. Canada was elected to the Council of IMCO for a two-year term ending in 1969 and to the Maritime Safety Committee for a four-year term ending in 1969.

Universal Postal Union.—With a membership of 132 (1967), the Universal Postal Union (UPU) is one of the largest of the Specialized Agencies of the UN; it is also one of the oldest, having been founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and normally meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, UPU activities are carried on by an executive council of which Canada is at present a member, a consultative committee on postal studies, and an international bureau. The 16th Congress will be held in Tokyo in 1969.

International Monetary Fund.—The International Monetary Fund, established by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems, including the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also member countries under certain conditions may draw on the regular resources of the Fund, which now amount to some \$21,000,000,000 (of which the equivalent of about \$3,700,000,000 is in gold) or on the supplementary resources of \$6,000,000,000 made available in 1962 under the General Arrangements to Borrow, which in 1966 were extended until 1970. The Fund has 107 members. Canada has been represented on the Fund's Executive Board since its inception.

World Bank Group.—The World Bank Group, consisting of the International Bank for Reconstruction and Development, or World Bank, the International Finance Corporation and the International Development Association, is by far the largest of the multilateral aid-giving institutions and accounts for 11 p.c. of the capital flows to the less-developed countries from all multilateral and western bilateral aid agencies combined.

The *International Bank for Reconstruction and Development* or *World Bank*, like the International Monetary Fund, originated in the Bretton Woods Conference of 1944. Its early loans were made to assist in the postwar reconstruction of Europe but it has played an increasingly important role in the provision of financial assistance and economic advice to the less-developed countries.

By June 30, 1968, the Bank had made 552 loans totalling \$11,200,000,000 (U.S.). The resources available to the Bank for use in its lending operations are (1) that portion of its subscribed capital which is paid in by governments and freely usable (\$1,800,000,000); (2) its retained profits (\$1,300,000,000); and (3) the funds it is able to raise by the sale of bonds to central banks and government agencies and on private capital markets. The World Bank lends its available funds at an interest rate slightly above its current cost of borrowing—the present rate (1968) is 6.5 p.c.—and with maturity periods usually ranging between 15 and 25 years. The level of the Bank's lending in the year ended Mar. 31, 1968, was \$850,000,000. The greater part of the Bank's lending has financed so-called infrastructure projects which provide the framework supporting the rest of a country's economy but which generally do not attract private investors. About one third of the total loans has financed the development of electric power plants and transmission lines; another third has financed railways, roads and ports; and most of the remainder has been divided between industry and agriculture. In recent years, however, the Bank has been making loans for education and placing increasing emphasis on agriculture.

Canada's subscription to the World Bank is \$792,000,000 (U.S.) out of a total for all countries of \$22,800,000,000. Only 10 p.c. of each subscription is paid in, however, with the balance remaining as a guarantee against which the Bank is able to sell its own bonds in world capital markets. By selling such bonds and by selling loans from its portfolio to other investors, the World Bank augments its capital. As of June 30, 1968, the Bank had outstanding borrowings of \$3,290,000,000 (U.S.), mostly in the form of U.S. dollar bonds but also including issues denominated in Canadian dollars, Belgian francs, Deutsche marks, Italian lire, Netherlands guilders, pounds sterling, Swedish kronor and Swiss francs. In all, the Bank has offered seven bond issues totalling \$135,000,000 (Cdn.) in the Canadian

market. Maturities on these bonds range from one to 25 years and the interest rate from $3\frac{1}{2}$ p.c. to 7 p.c. In the past four years there has been one 25-year issue each year for a total of \$80,000,000 (Cdn.). The latest issue in early 1968 carried a yield to investors of 7.22 p.c.

The *International Finance Corporation* (IFC) was established in 1956 as an affiliate of the IBRD to assist less-developed member countries to promote the growth of the private sector of their economies. IFC's principal objectives are to provide risk capital for productive private enterprises, in association with private investors and management; to encourage the development of local capital markets; and to stimulate the international flow of private capital. IFC makes investments in the form of share subscriptions and long-term loans, carries out standby and underwriting arrangements, and provides financial and technical assistance to privately controlled development finance companies. Of IFC's total subscribed capital of \$101,400,000 (U.S.), Canada provided \$3,600,000 (U.S.). In addition to its subscribed capital, IFC is able to finance its activities through loans from its parent institution, the World Bank. Total investments and underwriting commitments by IFC to June 1968 amounted to \$270,000,000 (U.S.) and the level of activity in the past two years was \$50,000,000 annually.

The *International Development Association* (IDA), also an affiliate of the IBRD, was established in 1960 to meet the situation of a growing number of less-developed countries whose need for, and ability to make use of, outside capital is greater than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to June 1968 have each been for a term of 50 years, bearing no interest but with a service charge of $\frac{3}{4}$ of 1 p.c. per annum. IDA secures its resources from governments in the form of interest-free subscriptions and contributions and, to a smaller extent, from a portion of World Bank profits. As of June 30, 1968, resources made available to the Association totalled approximately \$1,800,000,000 (U.S.), of which Canada contributed \$79,500,000 (U.S.). Credits extended by the Association also totalled about \$1,800,000,000 (U.S.). Tentative agreement had been reached, subject to legislative approval, on further contributions over the three years 1968-69 to 1970-71 totalling \$1,200,000,000 (U.S.) or \$400,000,000 (U.S.) a year. Canada's share of this replenishment would be \$75,000,000 (U.S.) over the three years.

International Atomic Energy Agency.—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the U.N. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways. Because Canada has been designated as one of the five members most advanced in nuclear technology, including the production of source materials, a Canadian representative has served on the IAEA Board of Governors since the inception of the Agency.

As of June 1968, IAEA membership consisted of 98 states. The organization of conferences and symposia of experts, the dissemination of information and the provision of technical assistance are among the methods that the Agency adopts to carry out its functions. With the rapid expansion in the use of nuclear power, much of the Agency's program is devoted to this field as well as to the use to which isotopes may be put in agriculture and medicine. An aspect of the IAEA activities that is becoming increasingly significant relates to the development and application of safeguard measures to ensure that nuclear materials supplied for peaceful purposes are not diverted to military uses.

International Law Commission.—By Article 13(1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in their individual capacity. They serve for terms of five years and, in general, represent the

main forms of civilization and principal legal systems of the world. As at Dec. 31, 1968, the 25 countries whose nationals formed the International Law Commission were: Afghanistan, Algeria, Argentina, Brazil, Britain, Chile, Dahomey, Finland, France, Greece, Hungary, India, Iraq, Israel, Italy, Japan, Madagascar, Mexico, Netherlands, Nigeria, the Union of Soviet Socialist Republics, the United Arab Republic, the United States of America, Uruguay and Yugoslavia. Canada's term expired in 1968.

Subsection 4.—Canada and the Disarmament Committee

As a member of the Eighteen-Nation Disarmament Committee (ENDC), Canada seeks to encourage and participates in the negotiation of international agreements to control the nuclear arms race and to reduce and eventually to eliminate nuclear weapons. The non-proliferation treaty is the most notable recent agreement of this type. Canada also promotes and participates in negotiations on complementary measures such as the reservation of the seabed for peaceful purposes and on measures relating to non-nuclear weapons. The ultimate objective of disarmament negotiations is the achievement of general and complete disarmament under effective international control.

Subsection 5.—Canada and the North Atlantic Treaty Organization

Two Ministerial Meetings of the North Atlantic Council were held during 1967, and meetings of Permanent Representatives were held continuously throughout the year at NATO Headquarters.

The Canadian delegation to the annual spring Ministerial Meeting held in Luxembourg June 13 and 14 was led by the Secretary of State for External Affairs and the President of the Privy Council. Discussions covered a wide range of problems. The Middle East crisis, and particularly its implications for the West, was the main topic. Member governments expressed their determination to support all efforts to establish a lasting peace in this area and to resolve the outstanding problems in a spirit of equity and in accordance with the legitimate interest of all concerned. Discussions also covered East-West relations and agreement was reached among NATO governments that they continue their efforts to expand contacts with the countries of Eastern Europe, notwithstanding the strains created by the events in the Middle East. Desire was expressed to see progress made in the field of disarmament and arms control, including steps directed toward preventing the proliferation of nuclear weapons. It was noted that a balanced reduction of forces by the East and West would constitute a significant step toward security in Europe. An interim report on the study of the future tasks of the Alliance was received, the final report to be available for the December meeting.

The Ministerial Meeting on Dec. 12, 13 and 14 was the first to take place at NATO's new headquarters in Brussels. Canada's delegation was led by the Secretary of State for External Affairs and the Minister of National Defence. As expected, the future tasks of the Alliance was the dominant theme. NATO's essential objectives were reappraised and found to be still valid; a new military strategy was agreed upon; and guidelines were established for putting additional emphasis on the organization's evolving political—as distinct from military—activities. These guidelines were the outcome of the study proposed in December 1966 by Foreign Minister Harmel of Belgium.

All 15 member governments accepted a definition of the objectives and future tasks of the Alliance in the following terms: there was a continuing need for defensive military arrangements, through which the Alliance could exhibit its determination to resist aggression; the political activities of the Alliance designed to promote a peace settlement in Europe had assumed a greater importance, and should be emphasized; there was a need for full and timely consultation among members in order to ensure the effectiveness of these political activities; and the military tasks of the Alliance were not incompatible with, but rather a necessary complement to, a constructive political role for the Alliance.

In agreeing that one of the essentials for achieving an improvement in East-West relations and a peaceful settlement in Europe must be NATO's continuing military strength and capability to deter aggression, the Ministers adopted a revised strategic concept submitted by the Military Committee following the first comprehensive review of NATO's strategy since 1956. The new strategy envisaged NATO having available a flexible and balanced range of responses, conventional and nuclear, for all levels of aggression or threats of aggression. These responses, subject to appropriate political control, were designed primarily to deter aggression and thus preserve peace. If aggression did occur, however, they would maintain the security and integrity of the North Atlantic Treaty area within the concept of forward defence, while affording maximum opportunity to avoid employing nuclear weapons.

The Nuclear Defence Affairs Committee, established in 1966 to advise the NATO Council on nuclear policy, met and received progress reports on the studies of the Nuclear Planning Group, of which Canada was a member. The year's work on a range of subjects was reviewed, particularly strategic nuclear forces, developments concerning anti-ballistic missiles, tactical use of nuclear weapons and national participation in nuclear planning. Consultation prior to the possible use of nuclear weapons was discussed.

The Defence Planning Committee, which consists of all NATO countries except France, also met and reviewed the work accomplished since May 1967. All Ministers strongly endorsed the view, which was later reflected in the communiqué, that one of the essential requirements for achieving an improvement in East-West relations and a peaceful settlement in Europe was NATO's continuing defensive strength and capability to deter aggression.

At the June 1968 meeting held in Reykjavik, Iceland, the Canadian delegation was led by the Under-Secretary of State for External Affairs. After examining the situation created by the recent measures affecting the access routes to Berlin, Ministers expressed the determination of the Three Powers responsible for the security of Berlin to maintain freedom of access to the city. Note was taken of the decision of the governments of the Three Powers and of the Federal Republic of Germany to remain in continuous consultation concerning Berlin and to stand ready to meet any contingency. Intentions were reaffirmed to continue efforts to improve East-West relations. Representatives of nations participating in the NATO defence program adopted a declaration on mutual force reductions that would be reciprocal and balanced in scope and timing, would serve to maintain the present degree of security at reduced cost but not risk destabilizing the situation in Europe and should be consonant with the aim of creating confidence in Europe generally and for each party concerned. The permanent representatives to NATO were directed to make all necessary preparations for discussions on this subject with the Soviet Union and other countries of Eastern Europe and to call on them to join in the search for progress toward peace.

A Permanent Council report was approved which dealt in detail with the situation in the Mediterranean and related defence problems and was directed to extend their consultations in range and depth as circumstances required. Representatives of countries taking part in the Defence Planning Committee, concerned at the recent expansion of Soviet activity in the Mediterranean, directed the permanent representatives, with the assistance of the NATO military authorities, to take under early consideration measures designed to safeguard the security interests of NATO members in the Mediterranean area and to improve the effectiveness of allied forces in that area. France disassociated itself from these decisions. Satisfaction was expressed with recent developments in Greek-Turkish relations and the hope expressed that informal talks started between the two communities of the Republic of Cyprus would make an important contribution toward the settlement of the problem.

The regular semi-annual meeting of the North Atlantic Council in Ministerial session customarily held in December was advanced in 1968 to permit consideration of the con-

sequences for the Alliance of the situation created by the Soviet invasion of Czechoslovakia. Canada was represented at this meeting, held in Brussels Nov. 14-16, by the Secretary of State for External Affairs and the Minister of National Defence.

The Ministers of the 15 countries participating in the meeting were unanimous in their condemnation of Soviet armed intervention in the internal affairs of another country and agreed that the resulting situation had created an element of uncertainty about future Soviet intentions as they affect the security of the West. In these circumstances, they re-affirmed their determination to defend the members of the Alliance against any armed attack in accordance with the Treaty and indicated that any Soviet intervention directly or indirectly affecting the situation in Europe or in the Mediterranean would create an international crisis with grave consequences. They could not remain indifferent to any development that threatened the security of the members of the Alliance.

The members participating in NATO's integrated defence program agreed that in the circumstances there was a need to re-assess their defences and indicated various measures they were taking to ensure that the security of NATO was being maintained at an adequate level. At the same time, they re-affirmed NATO's determination to pursue the long-term goal of détente in East-West relations and to exploit all opportunities to make progress in disarmament.

The Canadian Ministers cautioned against the Alliance over-reacting to Soviet actions in Czechoslovakia which were not directed specifically against members of NATO. They stated that, while it was natural to stress the defensive character of the Alliance, it was essential that NATO seek all reasonable opportunities to resume dialogue with the Soviet Union and thus promote progress toward the peaceful settlement of the issues facing Europe. It was explained that Canada was proceeding with its review of defence policy but in the meantime would maintain its professional forces in Europe and in Canada at their high level of training, equipment and operational readiness.

Canadian Contribution to NATO.—During 1967-68 Canada continued its policy of support for NATO. As its contribution to the military strength of the Alliance, Canada maintained an army brigade group and an air division in Europe and supporting forces in Canada, including two battalions assigned to the Allied Command Europe Mobile Force. Canadian naval forces continued to be assigned to the Supreme Allied Commander Atlantic (SACLANT), for the defence of the North Atlantic region. Canada also participated with the United States in the defence of the North American Continent through the North American Air Defence Command (NORAD).

Since 1950, Canada has contributed approximately \$1,890,000,000 to NATO infrastructure and related military programs and to mutual assistance to the European members of NATO. The mutual assistance program has consisted of transfers of equipment to member countries and aircrew training in Canada of NATO forces. The program has, of course, decreased in magnitude with the changing conditions and the increasing ability of the European members to meet their individual defence requirements.

Subsection 6.—Canada and the United States

Relations between Canada and the United States are of vital importance to each and this has long been recognized by both countries. History and geography have made the two countries neighbours and the demographic realities and economic patterns of today contribute to the partnership that characterizes the relations between them. For example, Canada, which lives by its world trade, sells to the United States some three quarters of all its exports and buys almost one quarter of that country's exports. This exchange of goods, which totals some \$15,000,000,000 a year, is only one illustration of the importance each country has for the other and of the significance of co-operation and understanding in their relationship. Co-operation in bilateral matters and in working toward the objectives that Canadians and Americans share in international affairs has marked this unique rela-

tionship in the past and experience has demonstrated a willingness on both sides of the common border to maintain and foster the spirit of sympathetic understanding to which both countries have become accustomed in their dealings with each other.

As indicated in the previous Sections and Subsections of this Chapter, both countries are active members of the United Nations and its many specialized agencies and both participate actively in the North Atlantic Treaty Organization (NATO), the General Agreement on Tariffs and Trade (GATT), the Organization for Economic Co-operation and Development (OECD), and other important international organizations. There are also many bilateral bodies that facilitate Canada-United States co-operation. The Ministerial Committee on Trade and Economic Affairs annually brings together members of the Cabinet in both countries for extensive discussions on a wide range of problems of bilateral and international interest. The Permanent Joint Board on Defence and the International Joint Commission are forums, respectively, for the discussion of North American defence and problems related to boundary waters, and many joint committees and agencies deal with other specialized subjects. But perhaps the most important factor in reinforcing the traditional friendship of the two countries is the continual intermingling of their peoples as private individuals across the shared border.

Subsection 7.—Canada and Latin America

Canada has formal diplomatic relations with all 20 Latin American Republics and maintains 14 resident diplomatic missions in the area. Canada's relations with these countries have increased appreciably during the past few years in every field.

Canada is a member of three Inter-American organizations linked with the Organization of American States—the Pan-American Institute of Geography and History, the Inter-American Statistical Institute and the Inter-American Radio Office. Since 1931, Canada has been a member of the Postal Union of the Americas and Spain, which, although not an OAS organization, is closely related to that body. Canada joined the United Nations Economic Commission for Latin America in 1961.

Canada has also been officially represented at a growing number of meetings and conferences concerned with Latin American and Inter-American affairs. Canadian observer groups have regularly attended the annual Ministerial Meetings of the Inter-American Economic and Social Council, the Pan-American Health Organization, and the Inter-American Cultural Council, all organs of the OAS, and the Inter-American Committee for the Alliance for Progress. In addition, observers are occasionally sent to meetings of the Inter-American Children's Institute and the Inter-American Indian Institute. During the past few years, Canada has been represented in an observer capacity at several high-level OAS meetings, including the extraordinary conference in Buenos Aires. In addition to attendance at meetings of some of the bodies mentioned in the preceding paragraph, Canada has recently been represented at the conference of Ministers of Education and Economic Planning of Latin America and at a meeting of the Centre for Latin American Monetary Studies, both held in Buenos Aires, at the Seventh Meeting of the Inter-American Development Bank in Mexico, at the Inter-American Conference of the Ministers of Labour in Caracas, at the annual meeting of the Inter-American Tropical Tuna Commission in Guayaquil, Ecuador, and at the Seminar on Tax Administration in Washington. In addition, Canada acted as host for the American Regional Conference of the International Labour Organization, held in Ottawa in September 1966. A Canadian expert represented Canada unofficially at the Inter-American Meeting of Copyright Experts in Rio de Janeiro.

In December 1964, the Canadian Government signed an agreement with the Inter-American Development Bank under which Canada agreed to make available \$10,000,000 (Cdn.) in development loan funds for use in financing development projects in Latin America. This initial commitment has been followed in each of the three succeeding years by additional commitments of an equal amount, bringing the total Canadian development

loan funds made available to Latin America to a level of \$40,000,000 (Cdn.). As at September 1968, 11 Canadian development loans totalling \$22,256,000 (Cdn.) have been approved for financing of development projects in Latin America.

Although the volume of Canadian trade with Latin America is still a small part of total Canadian trade, it has more than trebled since the end of the Second World War. Venezuela, Cuba, Mexico and Argentina rank among the top 25 Canadian export markets. The Canadian Government has directly facilitated Canadian exports to Latin America and indirectly assisted Latin American economic development through the provision of long-term credits under the Export Credits Insurance Act; these credits total more than \$153,000,000 (Cdn.).

Subsection 8.—Canada and Europe, the Middle East, Africa and the Far East

Canada and Europe.—Canada's relations with Europe spring from the common cultural heritage that this country shares with Britain and France and also reflect its traditional links with other European countries from which Canada's population derives. Canada's substantial participation, on European soil, in the two World Wars has further strengthened these relations. In view of their importance, the Canadian Government has undertaken a major review of its relations with Europe to determine how they can be most effectively conducted and developed.

Since 1945, Canada's relations with Western Europe have steadily developed under the impulse of major Canadian interests in the area. In the political and defence fields, Canada expresses through its NATO membership in particular its interest in the security of Western Europe and in an eventual European settlement. Exchanges with Western Europe are playing an increasingly important role in Canada's cultural life and in the development of its bicultural policy. Western European countries, especially Britain, have been major trading partners for Canada and its chief source of immigrants. Accordingly, Canada maintains close and extensive bilateral relations with Britain and France in particular, as well as with most of the Western European countries and has resident diplomatic missions in almost all of them. It also co-operates actively with them in a number of multilateral organizations such as the Organization for Economic Co-operation and Development (OECD). As Western Europe becomes increasingly prosperous and cohesive, it tends to assume greater importance for Canada for the influence that it wields, for the possibility of fruitful co-operation it offers in many fields and for the element of balance it can provide to Canada's external relations.

Canada's relations with Eastern Europe have suffered a setback as a result of the military intervention in Czechoslovakia by the Soviet Union and four of her Warsaw Pact allies on Aug. 20, 1968. For a number of years prior to this event, Canada had been greatly encouraged by the general relaxation of international tensions in Europe, which had made it possible to envisage an equitable settlement of European problems. During this period, Canada's bilateral relations with Eastern Europe were characterized by an increase in the volume of trade and tourism, official and semi-official visits in both directions, and agreement on many outstanding issues involving such matters as Canadian claims. Diplomatic relations were extended from Canada's existing resident missions in Moscow, Prague, Warsaw and Belgrade to cover Hungary, Romania and Bulgaria through non-resident Ambassadors. The peak of Canada's relations with Eastern Europe was reached during Expo 67 as a result of the significant contributions made by Czechoslovakia, Yugoslavia and the Soviet Union. Unfortunately, the Soviet resort to force has damaged the international confidence which these developments had done much to create but the long-term objective of establishing normal relations between East and West remains.

Canada and the Middle East.—Since the Second World War, the Middle East has been a focus of tension and conflict. During this period, Canada has participated in United Nations efforts to promote calm and stability in the area. It has also contributed substantially to measures to alleviate want among the victims of recurring hostilities. ¶

Canada provided observers to the United Nations Truce Supervision Organization (UNTSO) and was closely associated with the formation of the United Nations Emergency Force (UNEF). Canadian troops served with UNEF in Gaza and Sinai from its inception until its withdrawal in May 1967. Canadian officers continue to serve with UNTSO, which is supervising the Arab-Israeli cease-fire.

Since the establishment of the United Nations Relief and Works Agency for Palestine refugees (UNRWA), Canada has been one of the leading contributors to that Agency. Canadian Government contributions have taken the form of cash, food and other supplies aimed at relieving human suffering in the Middle East. In emergency situations it has provided various forms of assistance through the International Red Cross.

Canada and Africa.—Canada in the past had a certain latent interest in Africa and carried on considerable commercial and missionary activity but relations with African countries have evolved rapidly over the past ten years, paralleling the accession to independence of the majority of former colonial territories. The increasing voice of these newly independent states in world affairs, together with a recognition of their development problems and the importance of the political issues affecting the whole African Continent, have sparked this evolution.

Direct relations were first established with the former British colonies in a natural way as they became independent within the Commonwealth. Increasing contacts and diplomatic relations with the newly independent French-speaking African states soon followed in recognition of the bicultural outlook of this country and the important role played by these countries in African affairs. Canada now has diplomatic relations with almost all the independent African states and there are resident Canadian missions in 11 countries on that Continent. Coupled with the development of bilateral diplomatic and commercial relations has been the elaboration of a significant program of Canadian aid to Africa. This program, with its English and French components, directs more than \$30,000,000 of aid funds annually to the African Continent (see pp. 149-151).

Canada and the Far East.—Canada has had important links, both official and private, with the Far East over many years and is becoming steadily more aware of its position as a Pacific as well as an Atlantic nation. With the development of modern transport and communications, the Pacific Ocean has ceased to be a barrier and as a result contacts between Canadians and the peoples of the Far East are increasing rapidly in number and variety. Many of these contacts are based on the growing volume of trade and other forms of economic co-operation. Japan in particular is Canada's third largest trading partner and bilateral exchanges between the two countries amounted in 1967 to almost \$880,000,000. In addition to the normal dialogue between the two governments through their respective embassies, political contact is maintained through regular meetings of Cabinet Ministers to discuss matters of mutual concern. Canada was the first country to announce its intention to participate in Expo '70 at Osaka which will feature a Canadian Government pavilion representing the country as a whole and also provincial pavilions for Quebec, Ontario and British Columbia.

Canada has continued its policy of developing trade and other relations with Communist China, on the premise that Peking should not be isolated but rather encouraged to become more involved in the international community. While Canada has not, in the past, maintained diplomatic relations with Peking, the question of Canadian recognition has been under intensive study during the latter part of 1968, following a policy statement which declared the Government's intention to seek a satisfactory basis for diplomatic relations between Canada and China.

As a member of the International Commissions in Viet-Nam, Laos and Cambodia, Canada has maintained a close interest in the region formerly known as Indo-China. Canadian policy both within the Commissions and in a broader international context has been based on recognition of the needs of the countries of the region for political and economic

stability. The course of events in Viet-Nam in recent years has cut across these objectives and in these circumstances the overriding concern of Canadian policy has been to work toward a solution of the present conflict through negotiation rather than by military means. Canada has spared no efforts to this end.

Canada's relations with other countries of the Far East are also growing in importance. The arrival at the end of 1967 of Canada's first resident Ambassador in Bangkok aptly symbolized the developing political and economic links between Canada and Thailand. The Canadian Government has expressed its readiness to contribute to an international program for the economic rehabilitation of Viet-Nam after the end of hostilities and, as a member of the Asian Development Bank, has agreed to contribute to the Bank's technical assistance program and its Special Fund. Canada continues to be a substantial contributor to the Colombo Plan and to the United Nations agencies promoting economic development of Far Eastern countries.

Asian Development Bank.—Canada is a member of the Asian Development Bank, a regional development agency established in 1966 with Articles of Agreement patterned broadly after those of the World Bank and the other international financial institutions (see p. 139). The Bank's subscribed capital stock is \$970,000,000 (U.S.), of which one half is being paid in over the five-year period 1966 to 1970. The balance of member country subscriptions will remain as a callable guarantee against which the Bank may sell its bonds on world capital markets. Asian regional countries, including Japan, Australia and New Zealand, have subscribed \$615,000,000 (U.S.) and non-regional countries have subscribed the remaining \$355,000,000 (U.S.). Canada's subscription is \$25,000,000 (U.S.) of which three instalments of \$2,500,000 each have so far been paid toward the 50-p.c. paid-in portion.

For its ordinary operations, to be financed from paid-in equity capital or any resources raised on world capital markets, the Bank expects to follow a pattern similar to that of the World Bank and to lend at rates of interest related to the rate which the Bank itself would have to pay on any bond issues. The present lending rate (October 1968) has been set at 6½ p.c. As of September 1968, the Bank had made available loans to Thailand, Ceylon and Korea and a number of other projects were under active consideration.

The Bank is also authorized to establish Special Funds which may be provided to member countries on more flexible terms. Such special operations would be financed by voluntary contributions and kept separate and distinct from the Bank's ordinary capital resources. Canada has announced its intention to make available \$25,000,000 (U.S.) over a five-year period for the Bank's special operations.

Subsection 9.—Organization for Economic Co-operation and Development

The Organization for Economic Co-operation and Development (OECD) was established in September 1961 as successor to the OEEC, with Canada and the United States joining the countries of Western Europe as full members of the new body. Japan, previously a member of the Development Assistance Committee, became, in May 1964, a full member of the OECD and the first member from outside Western Europe or North America. Its headquarters are in Paris.

The prime purpose of the OECD is to promote among member governments co-operation in the fields of economic policy, trade and assistance to developing countries, although it also provides a valuable forum for discussion of common problems in agriculture, industry, finance, technology and manpower policy. At the first Ministerial Council in 1961, member countries approved a growth target of 50 p.c. for the decade to 1970; at the half-way mark in 1966, this goal had been considerably exceeded. Because of its development from the former OEEC, the Organization was at first concerned largely with questions of primarily European interest but, as its membership expanded, it has become increasingly a recognized forum for broader consultation among advanced industrial countries, particu-

larly on questions of economic and financial policy and on the problems of the developing countries. In this latter regard, the OECD now constitutes the main forum for consultations among developed countries concerning the work of the United Nations Conference on Trade and Development (UNCTAD) Trade and Development Board and its committees.

The OECD brings together government officials as well as representatives of private business, labour unions, universities and other non-governmental bodies in both deliberative and consultative capacities, and provides for international liaison among such groups. Within Canada, liaison has been established with the business community through the Canadian Business and Industry Advisory Committee, which was established in 1962 and comprises representatives of the Canadian Chamber of Commerce, the Canadian Council of the International Chamber of Commerce and the Canadian Manufacturers' Association. Parallel arrangements exist for consultation with Canadian labour organizations.

Subsection 10.—Canadian External Aid Programs

The Colombo Plan.—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, in January 1950. Although the Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth Program. It is designed to assist in the economic development and the raising of living standards of all countries and territories in the general area of South and Southeast Asia. Its membership includes Cambodia, Canada, Ceylon, India, Indonesia, Iran, Japan, Korea, Laos, Malaysia, Maldiv Islands, Nepal, New Zealand, Pakistan, the Philippines, Singapore, Thailand, Viet-Nam and the United States; the latter is also engaged in a substantial program of economic aid in the same region. Iran and Singapore were admitted to membership in 1966.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year in one of the membership countries to review projects and exchange views on policy matters; the latest meeting was held in Rangoon in 1967. As a consultative body, it makes no collective policy decisions binding member countries; a Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Plan. At the 1959 meeting it was agreed to extend the Colombo Plan for another five years from June 1961, and it was similarly extended for a further five years at the 1964 meeting. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

From the inception of the Plan in 1950 through March 1968, Canada made available a total of \$982,402,600 in aid for capital and technical assistance projects in South and Southeast Asia. Although 18 countries are now receiving capital assistance from Canada, the largest contributions have so far been made to Ceylon, India, Malaysia and Pakistan. The Canadian contribution consists primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, power-generating plants, construction and fisheries projects and resources surveys, hospital equipment and cobalt therapy units, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs, such as industrial metals, asbestos, fertilizer, wheat, wheat flour and butter, from the internal sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program, up to March 1968, more than 4,400 persons from all countries in the area had come to Canada under Federal Government auspices for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. More than 500 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and

prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources-survey teams and on the installation and operation of capital equipment.

Commonwealth Caribbean Program.—In 1958, when the Federation of the West Indies was being formed, Canada undertook a five-year \$10,000,000 program of economic and technical assistance. Following the dissolution of the Federation in 1962, it was decided to continue providing assistance to its component territories—Jamaica, Trinidad and Tobago, Barbados, Guyana, British Honduras and the Leeward and Windward Islands—and, since then, \$59,380,000 in loans and grants has been made available to the area, including \$17,250,000 under the 1967-68 program.

Under this program, the area and its territories have been provided with two passenger-cargo ships for inter-island transportation, a deep-water wharf at St. Vincent, a residence for the University of the West Indies in Trinidad, port-handling equipment for five harbours and, for several of the smaller islands, schools, warehouses and freshwater supply facilities. Projects under way include a scheme for the expansion and improvement of Trinidad's dairy herds, the provision of rural schools in Jamaica, a prefabricated fish-packing plant, and assistance to the university in Guyana, and a five-year program concentrating aid to the Eastern Caribbean region in the fields of education, air transport, water development and agriculture.

A substantial amount of technical assistance has also been given. During the year ended Mar. 31, 1968, training programs were arranged in Canada for over 550 students from the Commonwealth Caribbean, the fields of study including agriculture, engineering, fisheries, forestry, medicine and public administration. In addition, 205 Canadians served in the Commonwealth Caribbean, including teachers, soil surveyors, and advisers in the fields of statistics, legal drafting, housing, films, radio broadcasting, postal services, Indian affairs, technical education and harbour management.

Special Commonwealth Africa Assistance Plan.—In the autumn of 1960 the Canadian Government undertook, subject to Parliamentary approval, to contribute \$10,500,000 to a Special Commonwealth Africa Assistance Plan (SCAAP) over a three-year period beginning Apr. 1, 1961. This program arose from discussions at the Meeting of Commonwealth Prime Ministers in 1960. Although entirely a Commonwealth scheme, SCAAP is essentially the counterpart in Africa of the Colombo Plan in Asia. The main donor countries are Britain, Canada, Australia and New Zealand. Some of the newer Commonwealth members, particularly India and Pakistan, have been able to provide limited amounts of technical assistance in fields in which they have experience and specialized knowledge. All Commonwealth countries and dependent territories in Africa qualify for development assistance under the SCAAP program.

As occurred in other areas of Canada's expanding aid program, the level of grant aid to SCAAP increased in 1967-68 to \$19,500,000 from \$12,500,000 in the previous fiscal year and development loans assistance remained at \$6,000,000. In 1965, the first Canadian development loan in Africa was extended to Nigeria in the amount of \$3,500,000 and, early in 1966, two loans totalling \$2,450,000 were granted to Tanzania. A \$2,000,000 food-aid grant in the form of wheat flour was made to Ghana.

Technical assistance programs continued to receive major emphasis. During 1967-68, more than 500 Canadian teachers, professors and technical experts were on assignment in Africa and 661 African students received academic and technical training in Canada. This represented a sharp increase in the program of technical assistance over the previous year.

Canadian capital assistance has concentrated on projects assigned a high priority by the recipient country and in which Canada has a high degree of expertise. These included aerial mapping and survey work, forest inventories, pulp and paper survey and forest products development, irrigation and land reclamation, medical training and wheat research, geological surveys and mineral exploration, and the provision of equipment for

schools and national parks. A major joint Canadian-Ghanaian effort was the building, equipping and staffing of the Trades Training Centre at Accra at an estimated cost to Canada of \$1,155,000.

The Commonwealth Scholarship and Fellowship Plan.—The proposal to establish a Commonwealth Scholarship and Fellowship Plan was made at the Trade and Economic Conference held at Montreal in September 1958. The Conference envisaged a scheme of 1,000 university scholarships, of which Britain undertook to provide one half and Canada one quarter. The details of the proposed scheme were worked out at the Commonwealth Education Conference at Oxford in 1959. This Plan was designed to enrich the intellectual life of each country of the Commonwealth by enabling an increased number of its brighter students to share in the wide range of educational resources available throughout the Commonwealth and thus promote the equality of educational opportunity at the highest level. During the academic year 1967-68, there were 204 Commonwealth scholars in Canada; since the Plan first became operational during 1960-61 a total of 746 scholars have come to Canada for advanced study.

In 1965, Research and Visiting Fellowships were introduced as part of the Canadian contribution to this Plan. In 1967, one Research Fellowship was awarded for a full academic year and six Visiting Fellowships for shorter periods. These Fellowships enable senior educationists from other Commonwealth countries to visit Canadian universities and other educational institutions to carry out investigations, study or research in their particular fields.

Assistance to French-Speaking States in Africa.—In April 1961 the Canadian Government announced an offer of assistance in the educational field to the French-speaking states in Africa and subsequently appropriated \$300,000 for this purpose for each of the years ended Mar. 31, 1962, 1963 and 1965. It was decided at the commencement of this program that emphasis should be placed on the provision of Canadian teachers for Africa. For the years ended Mar. 31, 1967 and 1968, aid was increased and for the latter an allocation of \$12,000,000 was provided to allow for development of a capital assistance program as well as expansion of technical assistance. During that year, 428 teachers and university professors served in French-speaking Africa and 310 students received training in Canada.

Early in 1968, a special Canadian Government mission, led by the Hon. Lionel Chevrier, visited some of the French-speaking countries of north and west Africa to look into their development needs and make recommendations for Canadian assistance. A number of projects were agreed to in principle involving a Canadian commitment of at least \$30,000,000 over a three-year period (additional to existing aid levels). Included were

The provision of an ambulance is part of Canada's assistance to the Malaysian Government to provide improved medical service for the Orang Asli aborigines.

Most of Canada's economic assistance to less-developed countries is granted under direct partnership arrangements between Canada and the governments concerned.

Canadian aid to the University of the West Indies in Trinidad included the gift of a residence, "Canada Hall".

A Canadian-built pilot launch operates at Bridgetown, Barbados. The eastern Caribbean region will benefit in the 1967-73 period from a concentration of Canadian assistance to air transport, education, water development and agriculture.

Surveying equipment used at irrigation and dam sites in Ghana is explained by Canadian technicians to new crew members. Canadian experts are sent to developing countries to help with the establishment and improvement of local facilities.

agricultural projects in Morocco and Tunisia, educational projects for the Ivory Coast, Senegal and Niger, and natural resources assistance to Algeria and Cameroon. Health projects were proposed for Morocco, Tunisia, Cameroon and Niger and power projects for Tunisia and the Ivory Coast.

Latin American Program.—A bilateral Canadian aid program for Latin America was initiated in December 1964, when the Canadian Government concluded an agreement with the Inter-American Development Bank (IADB) by which Canada allocated \$10,000,000 in 'soft' development loan funds for use in high-priority economic, technical and educational projects in Latin America. This allocation was augmented in 1965 by \$10,000,000 and in 1967-68 by a further \$20,000,000.

Under terms of the agreement, the IADB selects and processes proposed loan projects before submitting those considered suitable to the Canadian Government for its approval. By Mar. 31, 1968, 11 Canadian development loans totalling \$22,256,000 had been made available. They included the Port Authority of Acapulco, one of the main Pacific seacoast ports of the Central American Republic of El Salvador, which was granted an interest-free development loan of \$3,240,000 for the expansion and improvement of port facilities, and Canadian development loan funds of up to \$1,260,000 were made available to the Republic of Ecuador to finance a resources survey of 13,000 sq. miles of agricultural and forest land in that country's Guayas River Valley. Projects were also undertaken in Paraguay, Argentina, Bolivia, Mexico, Chile, Peru and Colombia, with emphasis on pre-investment and feasibility studies and the supplying of Canadian telecommunications, mining and industrial equipment.

Co-operation with the United Nations and its Specialized Agencies, and with other International Aid Programs.—In addition to the annual contributions made to the United Nations Development Program, which encompasses all United Nations programs of technical assistance, Canada arranges training programs in this country for individuals studying under the auspices of the different specialized agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Mar. 31, 1968, more than 2,200 individuals had come to Canada through the various agencies from more than 100 countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the specialized agencies on specific technical assistance assignments in under-developed countries. Canadian allocation to multilateral organizations and agencies amounted to \$48,456,600 during 1967-68, making a cumulative total since 1951 of more than \$298,000,000.

Canadian International Development Agency.—Since 1960 the operation and administration of Canada's external assistance programs have been the responsibility of the External Aid Office, the name of which was changed in 1968 to the Canadian International Development Agency (CIDA), under the direction of a President.

As mentioned under the separate programs above, additional funds were made available for grant assistance in 1967-68. Canada also introduced a development loan program for which \$50,000,000 was authorized in 1965 by Parliament on a non-lapsing basis. The present fiscal period being reported upon is the fourth consecutive year in which this amount of money has been appropriated for development loan purposes. The terms of the loans are comparable with those of the International Development Association—up to 50 years maturity, non-interest-bearing, and a ten-year grace period.

In 1965, Parliament approved the establishment of a separate food-aid program under which the CIDA is able to purchase food products to meet part of the Canadian contributions to the FAO World Food Programme and to meet the needs of countries requesting this form of Canadian assistance. In 1968, Canada's contribution to the world's food needs totalled \$75,000,000. The continuing high level of this food aid program was considered necessary because of distress in Asia and parts of Africa due to crop failures, as well as continuing Canadian commitments to UN specialized agencies.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Census of Population

This Section presents in brief form the results of the limited census of population taken on June 1, 1966, with certain comparable data from earlier censuses. The 1966 Census did not include questions on ethnic origin, birthplace, religious denomination, language or mother tongue so that the 1961 data in Subsections 6 to 8 will remain the latest available until the taking of the comprehensive decennial census in 1971.

Detailed census data are published in a series of reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics. A list of these publications is available on request from the Information Division of the Dominion Bureau of Statistics.

Subsection 1.—Growth and Movement of Population*

Canada's population stood at 20,015,000 in 1966 as against 10,377,000 in 1931 and 5,371,000 in 1901. In the first decade of the century, when the West was being opened up for settlement, the gain of 34 p.c. was greater than in any other censal period. During that decade, about 1,760,000 immigrants entered the country and natural increase amounted to an estimated 1,000,000. However, since the total increase in population was 1,835,328, it is evident that a substantial number of people left the country during the period. In the 1911-21 decade, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000, were factors in this decline. Although the flow of immigrants was reduced during the war years, it had been very heavy immediately preceding the War, so that the total

* An outline of the growth of population in Canada since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census, Vol. X of the 1951 Census, and Bulletin 7.1-1 of the 1961 Census.

number for the period (1,612,000) was very close to that for the previous censal period. At the same time, emigration was again extremely high and the increase in population amounted to 1,581,306, being an average of 2 p.c. a year compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to 1,200,000 and emigration was estimated at 1,000,000. Thus the increase in population, which amounted to 1,588,837, was only 229,000 greater than the natural increase. A feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930s, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada, although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000. Natural increase was only 1,220,000, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding five-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population growth was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and sharp increases in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the Continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. Although there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, 1,542,853 immigrants entered the country, more than double the estimated emigration. All provinces gained in population during 1951-61 but their rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total actual increase. In contrast, increases in the other six provinces were entirely accounted for by natural increase.

Canada showed a declining rate of population growth over the three five-year periods between 1951 and 1966. In the first period, 1951-56, an outstanding development of economic resources was experienced and, reflecting this expansion, population growth continued at a high level. Slightly more than 2,000,000 persons were added to the population in this period, a 14.5-p.c. increase. Similarly, the 1956-61 period showed a quinquennial rate of increase of 13.4 p.c., corresponding to a numerical increase of 2,157,000. In the 1961-66 period, however, the rate fell to 9.7 p.c., largely caused by a marked downturn in the crude birth rate. The actual number of births declined from 2,362,000 in 1956-61 to 2,249,000 in 1961-66 and immigration, as well, fell off from 760,000 to 550,000. It should be noted, however, that immigration increased each year after the low point of 1961; in 1966 it reached a total of 194,743, more than two and a half times the 1961 figure.

Provincial rates of growth in the 1961-66 period varied due to differences in rates of natural increase and migration among the provinces. Comparing the provinces in order of rate of growth over this period, the population of British Columbia showed an increase of 244,592 or 15 p.c. (roughly 3 p.c. per annum), largely attributable to a net in-migration

of 140,000; this was the only province where the rate of growth due to migration (57 p.c.) exceeded that due to natural increase (43 p.c.). Ontario recorded an increase of 11.6 p.c. between 1961 and 1966, when 724,778 persons were added to its population. Natural increase accounted for 67 p.c. of the total increase. The in-flow of immigrants was the heaviest among the provinces as more than one half of all immigrants in the five-year period gave Ontario as their province of destination.

Population growth in Quebec and Alberta, at 9.9 p.c. and 9.8 p.c., respectively, corresponded closely with the Canada rate. Natural increase in Quebec accounted for close to 88 p.c. of the total and Quebec was the only province other than Ontario and British Columbia to show an increase in net migration in this period. Newfoundland ranked fifth among the provinces in rate of growth, with an increase of 35,543 persons or 7.8 p.c. The remaining provinces all showed rates of growth of less than 1 p.c. per annum, Nova Scotia ranking last with a rate of 2.6 p.c. over the five years. Yukon Territory showed a slight decrease in population in the 1961-66 period (-1.7 p.c.) but in the Northwest Territories the growth rate, at 25.0 p.c., was above the provincial figures.

1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Census Years 1921-66

NOTE.—Populations for the decennial census years 1871 to 1911 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131.

Table 3 shows the natural increase and the total population increase for Canada and the provinces in the periods 1951-56, 1956-61 and 1961-66. The balance between the total increase in population and the natural increase during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for the provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

3.—Changes in Provincial Population Size through Natural Increase and Migration, 1951-56, 1956-61 and 1961-66

¹ Includes the Yukon and Northwest Territories.

RECENT TRENDS IN URBANIZATION AND METROPOLITAN GROWTH*

All cities, towns and villages of 1,000 or more population, whether incorporated or not, were classed as urban in the 1966 Census; also classed as urban were the urbanized fringes of these centres, where the population of the city or town together with its urbanized fringe amounted to 10,000 or more and where the density of the fringe was at least 1,000 persons per square mile. The remainder of the population living outside of the urban centres and suburban fringes was classed as rural.

* Prepared by Leroy O. Stone, Consultant on Demographic Research, Dominion Bureau of Statistics, and Frances Aubry, Technical Officer.

Table 4 shows that, by 1966, close to 74 p.c. of the population of Canada lived in urban areas, according to the census definition. The degree of urbanization in the provinces, as measured by the portion classified as urban, ranged from 80 p.c. in Ontario to 37 p.c. in Prince Edward Island. However, although almost three quarters of the Canadian population was urbanized, only three of the ten provinces had surpassed this level of urbanization—Ontario with its 80 p.c., Quebec with 78 p.c. and British Columbia with 75 p.c. Of the seven remaining provinces, five were over 50 p.c. urbanized—Newfoundland, Nova Scotia, New Brunswick, Manitoba and Alberta.

In Table 4 the rural populations of the provinces are further classified as rural non-farm or rural farm. For census purposes, persons living on holdings of one or more acres with sales of agricultural products of \$50 or more in the previous year, are classed as residing in rural farm areas. Thus, the population living on "farms" would include some persons not connected with farming operations and who derived their income from non-agricultural pursuits. In 1966, among the provinces, Saskatchewan and Prince Edward Island had the highest percentages of rural farm population—29 p.c. and 28 p.c., respectively.

4.—Number and Percentage of the Population classified as Urban and Rural (Non-farm and Farm), by Province, Census 1966

The continued advances in the level of Canadian urbanization from 1851 to 1966 are shown in Table 5. During that period, the portion of the national population residing in urban centres increased almost sixfold from 13.1 p.c. to 73.6 p.c., having more than doubled since the turn of the present century. The urban influence in Canadian communities in 1966 is indicated only partially by the 73.6-p.c. level of urbanization. This figure is based upon the demographic conception of the term "urban"—the urban population residing in densely built-up areas, each having a given minimum population. A portion of the population classified as rural non-farm in the 1966 Census consisted of persons who commuted to work-places located within the recognized urban centres. Still more persons classified as rural-area residents had occupations and styles of living far removed from those of traditional rural society.

The level of urbanization in Canada, which was less than 15 p.c. in 1851, increased by about three percentage points in each of the next two decades, and in each of the following three decades accelerated up to nearly five percentage points, so that by 1901 the degree of urbanization was about 35 p.c. The acceleration continued and by 1931 the level of urbanization had passed 50 p.c. but during the generally depressed 1931-41 decade the rate of increase fell sharply, amounting to only about three percentage points. Then,

in the following two decades the rates of advance were at a record level since 1851. A seven-percentage-point increase was shown in 1901-11, 1941-51 and 1951-61 and in the 1961-66 period the level of urbanization advanced another 3.9 percentage points.

Ontario, Quebec and British Columbia have been the most highly urbanized of the major Canadian regions in every census since 1881; before 1881 the Maritimes were probably more highly urbanized than British Columbia. Since 1881 the differential in level of urbanization between that of the group of Ontario, Quebec and British Columbia and that of the Maritimes has widened. The differential between the same group and the Prairie region widened from 1901 to 1941 but has narrowed markedly since then as a result of the sharp upturn in the advance of urbanization in the Prairies. The differences in the levels of urbanization among the three most highly urbanized of the major regions have generally narrowed since 1881, which was the first year British Columbia had a level of urbanization similar to that of Central Canada.

Historically, the Maritime region is one of the oldest regions of Canada and may have been the most highly urbanized of the major regions some time in the eighteenth century. By 1851, however, it was slightly less urbanized than Quebec and Ontario and has shown a much lower level of urbanization than the two central provinces ever since. The long-time curve of the percentage of urban population in the Maritimes shows a pattern of undulations roughly similar to those of Ontario and Quebec but upward surges were not sustained in the Maritimes to the same extent as in Ontario and Quebec; as a result, there was a general widening of the differential between the Maritime and the central provinces between 1851 and 1961, which became prominent mainly after 1921.

There was also a marked widening of the differential in level of urbanization between the Prairie region and Central Canada following the great wave of western settlement that took place between 1896 and 1914. For the decades ended 1921, 1931 and 1941, the level of urbanization in the Prairie region increased very slowly. Thus, while the central provinces were urbanizing rapidly from 1911 to 1941, when Ontario's level increased from 50 p.c. to 68 p.c. and Quebec's increased from 44 p.c. to 61 p.c., urbanization in the Prairies advanced only from 28 p.c. to 32 p.c. However, following the relatively depressed 1931-41 decade, which was particularly severe in the Prairies, the advance of Prairie urbanization accelerated very sharply and in the 1951-61 decade continued to climb rapidly. Over the whole 25-year period from 1941 to 1966 the level of Prairie urbanization advanced from 32 p.c. to 63 p.c. in contrast with an increase of just four percentage points in the 30 years from 1911 to 1941. Urbanization in each Prairie Province increased by at least 22 percentage points between 1941 and 1966, Alberta leading with an increase of 37.

The urban population is being concentrated increasingly in centres of at least 100,000 in size. As early as 1951, 59.2 p.c. of the urban population resided in such centres and in 1966 the proportion had risen to 64.3 p.c.; in the latter year, almost 40 p.c. lived in centres of 500,000 or over. A concomitant trend is the decreasing percentage of urban population residing in centres of under 10,000, which dropped from 19.5 p.c. in 1951 to 15.8 p.c. in 1966.

6.—Distribution of the Urban Population by City Size-Group, Census Years 1951-66

NOTE.—1951, 1956 and 1961 figures are based on the 1956 definition as explained in the 1961 Census Bulletin 7.1-2, Table V; 1966 figures are as published in the 1966 Census.

Size Group	1951		1956		1961		1966

A major aspect of the increasing concentration of urban population into a relatively few large agglomerations is the development of metropolitan areas. A metropolitan area is a geographically small region centred economically upon a large city and containing a number of additional cities, towns and unincorporated urban settlements whose economies are closely linked with that of the large central city. Following are the areal components of the 1966 Census Metropolitan Areas.

² Same boundaries for city and census metropolitan area.

^{*} Vanier City Jan. 1, 1969.

Two of the Census Metropolitan Areas exceeded 2,000,000 in population in 1966—Montreal MA with 2,437,000 and Toronto MA with 2,158,000. Vancouver MA was not far from the 1,000,000-mark with 892,000 persons and Winnipeg MA was the only other MA with more than 500,000 persons. Other MAs with at least 400,000 persons were Edmonton (401,000), Hamilton (449,000), Ottawa (495,000) and Quebec (413,000). Smallest among the 1966 Census MAs were Saint John and St. John's, each with about 100,000 persons.

Over the period 1961-66, the 1966 Census MAs grew at a combined rate of 15.1 p.c. (with areas held constant), much higher than the national growth rate of 9.7 p.c. Particularly rapid rates were shown by Kitchener (24.2 p.c.), Calgary (18.5 p.c.), Edmonton (18.9 p.c.) and Toronto (18.3 p.c.). In contrast, Halifax (7.8 p.c.), Saint John (5.9 p.c.), Winnipeg (6.8 p.c.) and Windsor (9.5) had growth rates below the national figure.

Taken as a group, the 1966 Census MAs have consistently outpaced Canada as a whole in population growth rate. Table 8 shows that in 1966 one half of Canada's population resided in these MAs, whereas in 1901 an area closely approximating these MAs contained only one quarter of the national population; thus, over the 1901-66 period, the area of 1966 MAs had a population growth rate roughly twice as high as that of Canada as a whole. In 1966, more than one half of the populations of Quebec, Ontario and British Columbia resided in the MAs.

¹ Because Ottawa MA is partly in Ontario and partly in Quebec, Hull County in Quebec has been allocated to the Ontario total.

² Excludes Newfoundland, Yukon Territory and Northwest Territories.

The differential in growth rate between the MAs and Canada as a whole is largely attributable to migration. In the 1950s and 1960s, the MAs had moderately high rates of net in-migration, as shown in Tables 9 and 10. In 1961-66, high rates of net in-migration were shown by the MAs that grew most rapidly, while the MAs that grew least rapidly actually sustained net out-migration. By migration alone, Kitchener MA grew 14.9 p.c. and Toronto MA grew 9.9 p.c. between 1961 and 1966.

The 1961 Census provided the first series of statistics separating in-migration from out-migration for the MAs, in regard to *internal* migration. Table 10 shows that the MAs with relatively high in-migration rates also tended to have relatively high out-migration rates, and that relatively low rates of in-migration were roughly associated with relatively low out-migration rates.

¹ Based on sample data collected in the 1961 Census and refers to the population in private households as of 1961.

² Estimated from vital statistics; 100 (actual population increase—natural increase)/(population at beginning of period).

³ 100 (in-migration/reporting population).

⁴ 100 (out-migration/exposed population).

⁵ 100 (net migration/reporting population).

⁶ On 1961 areas.

⁷ On 1966 areas.

The demographic and socio-economic compositions of the migrants to and from MAs are highly significant for the growth potential of the Canadian population and for the functioning of the Canadian economy. The age profile of the migration, given in Table 11, shows the typical bulge in the ages which are marked by family formation, labour force entry and early working life—roughly ages 20 to 34. This bulge tends to reduce the median age of the MA population by its selective additions of young adults and by the indirect impact of these additions on the crude birth rate.

Generally, the migration streams flowing into and out of MAs show higher levels of education and occupational skills than any other major migration streams in Canada. Tables 12 and 13 show, for example, the highest concentrations of university-trained

persons among the migrants to and from MAs, and does so for age groups well above those that reflect recent moves to MAs for the purpose of obtaining university education. The high concentrations of university-trained persons shown for the streams flowing to and from MAs are only partly accounted for by the generally higher levels of educational attainment in MA populations.*

* Further discussion on this topic is presented in 1961 Census Monograph *Migration in Canada*, Vol. I, Chapter Four.

¹ Persons in the labour force and not attending school.

Subsection 2.—Populations of Incorporated Cities, Towns and Villages

The population of all incorporated cities, towns and villages is classified by size group in Table 14 for the census years 1951, 1956, 1961 and 1966. During the 1961-66 period, the number of such centres increased by 57 and the proportion of the total population living in them rose from 60.7 p.c. to 63.1 p.c.

The trend toward an increased concentration of the population in the larger urban centres continued in the 1961-66 period. In the five-year interval, the number of incorporated cities and towns of 50,000 or over rose from 29 to 40 and the proportion of the total population in these larger centres increased from 29.0 p.c. to 32.9 p.c. In contrast, although urban centres of 1,000 to 50,000 in size also increased in number from 893 to 921, the proportion of the population residing in these centres fell from 29.3 p.c. in 1961 to 27.9 p.c. in 1966. Similarly, the number of incorporated towns and villages under 1,000 rose from 1,039 to 1,057 in the 1961-66 period but their proportion of the population fell slightly from 2.4 p.c. to 2.2 p.c.

The Canadian cities and towns having a population of over 50,000 in 1966 are listed in Table 15. Included also are the years of their incorporation as cities or towns and comparative population figures for 1951, 1956, 1961 and 1966 which are given according to the boundaries in those respective years.

**15.—Incorporated Cities and Towns with Populations of Over 50,000 at the 1966 Census,
with Comparable Population Figures for 1951, 1956 and 1961**

NOTE.—The asterisk (*) indicates a boundary change since the preceding census. Population totals are based on areas as incorporated at each of these dates.

¹ All the municipalities on Île-Jésus were amalgamated to form the city of Ville de Laval in 1965.

Canada's more than five million dwellings range from small single-family houses to suites in huge apartment buildings and are a mixture of the old and the new.

City boundaries have moved outward to accommodate large new residential areas such as the Lakeshore area west of Montreal.

Old homes are part of the charm of New Brunswick's Saint John, the only Canadian city incorporated before 1800.

re apartments rea-
g skyward attest to

The 961 incorporated urban centres in Canada having a population of 1,000 or more at the time of the 1966 Census are listed alphabetically by province in Table 16 and their populations given for the two census years 1961 and 1966. Each population figure is for the boundary in effect at the time of the respective census.

16.—Incorporated Cities, Towns and Villages having Populations of 1,000 or Over, by Province, Census Years 1961 and 1966

NOTE.—Population tables are based on areas as incorporated at each of these dates; a change in municipal boundary since the preceding census is indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c.=city, t.=town and v.=village.

Subsection 3.—Density of Population

Table 17 shows the density of population in the different provinces and territories of Canada in the census years 1951, 1956, 1961 and 1966. Omitting the Yukon and Northwest Territories where population density is exceedingly low, there were 9.50 persons per square mile in Canada as a whole in 1966 compared with 8.66 in 1961 and 6.65 in 1951. The greatest increase in the latest five years was shown by Ontario where there were 2.11 more persons per square mile, followed by Prince Edward Island where there was an increase of 1.79. However, it should be remembered that the population within the

provinces is very unevenly distributed: all provinces with the exception of the Maritimes have large areas almost devoid of population and concentration in other areas is very high. The density of each county and census division, of each city, town and village of 2,500+, and of component parts of metropolitan and other major urban areas in 1966 is given in DBS Census Report 1.1 (Catalogue No. 92-601). Table 18 gives density in the city proper and in the fringe area of each of the five largest metropolitan areas in 1966 compared with 1961 and 1956.

Subsection 4.—Sex and Age Distribution

The sex and age distributions of a population are basic to most, if not all, other analyses, as they influence employment, marriage, birth and death rates and a multitude of other factors that are of great importance in the national life.

Sex.—The Canadian population has always been characterized by an excess of males, although this excess has been greatly modified in recent years. Since Confederation, the peak sex ratio for Canada as a whole was 113 reached in 1911, a census year that fell within a period of heavy immigration; the 1966 ratio was 101. In the older settled provinces east of Manitoba the ratio varied between 104 in 1911 and 100 in 1966, but in the western provinces which were being opened to settlement in the early years of the century the ratio changed from a high of 146 in 1911 to 103 in 1966.

The sex distributions and variations in ratio among the provinces are given for the census years 1951, 1956, 1961 and 1966 in Table 19.

Age.—The age composition of the Canadian population is, of course, a reflection of past trends in vital rates and immigration. The lower birth rate of the 1961-66 period relative to that of the late 1950s had a considerable impact on the population under 15 years of age in 1966. This age group increased by only 400,000 or 6.5 p.c. between 1961

and 1966 as compared with a gain of 967,000 or 18.5 p.c. in the 1956-61 period. As a result, the proportion that this age group formed of the total population fell from 34.0 p.c. in 1961 to 32.9 p.c. in 1966. The population of working age—those 15-64—increased more substantially, with a gain in excess of 1,200,000 or 11.5 p.c. in the 1961-66 period. Consequently, this age group constituted 59.4 p.c. of the total population in 1966 as compared with 58.4 p.c. five years earlier. Close to one third of the over-all 1961-66 increase in the 15-64 age group occurred among those 15-19 years of age. This young adult age group in 1966 was, of course, comprised of those born in the high birth rate, postwar years. The proportion of persons 65 years of age or over was approximately the same in 1966 as in 1961.

Table 20 shows the population of Canada classified by five-year age groups and by sex for the census years 1951, 1956, 1961 and 1966. The provincial distribution by specified age group is given for 1966 in Table 21.

Subsection 5.—Marital Status

After sex and age, marital status analysis is probably next in importance from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population. If the proportion of females in this group is low, the expected birth rate will be low. In 1966, 61.2 p.c. of all married females were in the 15-44 age group compared with 62.9 p.c. in 1961, 64.0 p.c. in 1951, 61.2 p.c. in 1941 and 63.5 p.c. in 1931.

In the 1961-66 period, the total population 15 years of age or over increased by 11.4 p.c. while the single adult population rose by 18.0 p.c., the married by 8.7 p.c. and the widowed and divorced combined by 12.5 p.c. Thus, the proportion of the adult population who were single increased from 26.5 p.c. in 1961 to 28.0 p.c. in 1966 and the married proportion fell from 66.6 p.c. to 65.0 p.c. in the five-year interval. It is of interest that the 1961-66 decline in the proportion married is attributable largely to smaller proportions in this category in the younger adult age groups. The proportion of those 25 years of age or over who were married was approximately the same at the two census years, i.e., 79 p.c., but the married proportion for the 15-24 age group fell from 23.0 p.c. in 1961 to 21.4 p.c. in 1966.

The marital status of the population in 1966 is shown in Table 22.

Subsection 6.—Ethnic Groups and Birthplaces

Ethnic Groups.—A population made up of diverse ethnic groups gives rise to political, social and economic problems quite different in nature from those of one with a more homogeneous ethnic composition. These problems are mitigated, however, to the extent that certain groups are more easily integrated than others. It is equally true that the different backgrounds of various ethnic groups lend variety and diversity to the national life.

The two basic groups in the Canadian population are the French and British Isles ethnic groups. The influence of the French in Canada covers a longer period and, with the exception of the 1921 Census, this group has always exceeded in number any of the components of the British Isles ethnic group.

In 1961, each person was asked the question: "To what ethnic or cultural group did you or your ancestor (on the male side) belong on coming to this Continent?". The language spoken at the time by the person, or his paternal ancestor, was used as an aid in determining the person's ethnic group. The classification is given for 1961 in Table 23 with comparative figures for 1951 and 1941. Information on ethnic group was not collected in the 1956 or 1966 Censuses.

Subsection 7.—Religious Denominations

In the 1961 Census, enumerators were instructed to record the specific religious body, denomination, sect or community reported in answer to the question: "What is your religion?". Thus, it should be noted that census figures do not measure church membership or indicate the degree of affiliation with any religious body. As shown in Table 26, close to eight out of ten persons in Canada stated that they belonged to one of the three numerically largest denominations—Roman Catholic, United Church and Anglican—in 1961. The table gives comparative figures for the census years 1941 and 1951; this information was not collected in the 1956 or 1966 Censuses.

26.—Principal Religious Denominations of the Population, Census Years 1941, 1951 and 1961

Subsection 8.—Languages and Mother Tongues

The term "official language" used by the census refers only to the English and French languages.* "Mother tongue" is the language a person first learned in childhood and still understands. It should be noted that persons indicated as speaking "English only" or

* The British North America Act, 1867 (Sect. 133) makes provision for the use of the English and French languages as follows:—

Either the English or the French Language may be used by any Person in the Debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec; and both those Languages shall be used in the respective Records and Journals of those Houses; and either of those Languages may be used by any Person or in any Pleading or Process or in issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.

The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those Languages.

"French only" with respect to official language may also speak other languages and have a mother tongue other than English or French. The use of the English and French languages in Canada at the time of the 1961 Census is discussed in a special article appearing in the 1965 Year Book at pp. 180-184. Table 27 gives the numerical and percentage distribution of official language by province in 1961; this information was not collected in the 1966 Census.

27.—Numerical and Percentage Distribution of the Population Speaking One, Both or Neither of the "Official" Languages, by Province, Census 1961

NOTE.—See text and footnote on p. 181 re the term "official language".

Subsection 9.—Households and Families

This Subsection contains limited statistics on households and families recorded at the 1966 Census; more detailed information may be found in 1966 Census reports relating to households and families (see also p. 153).

A household, as defined in the census, consists of a person or a group of persons occupying one dwelling.* It usually consists of a family with or without lodgers, employees, etc. However, it may consist of a group of unrelated persons, of two or more families sharing a dwelling, or of one person living alone. Every person is a member of some household and the number of households equals the number of occupied dwellings.

The total number and the average size of households are given by province for the census years 1956, 1961 and 1966 in Table 29.

29.—Households and Persons per Household, by Province, Census Years 1956, 1961 and 1966

The average size of the Canadian family† remained the same at 3.9 persons between 1961 and 1966. By province, however, there were some changes, with the average rising in provinces from Ontario west to Alberta and dropping in Newfoundland.

Closely related to the number of families per household, and also an indicator of living conditions, is the type of family. In 1966, 96.0 out of every 100 families in Canada were maintaining their own households as compared with 94.3 in 1961 and 92.3 in 1956, an

* A dwelling is defined as a structurally separate set of living quarters, with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside. The entrance must not be through another person's living quarters.

† A family, as defined in the census, consists of a husband and wife (with or without children who have never married) or a parent with one or more children never married, living together in the same dwelling. Adopted children and stepchildren are counted as own children and, in fact, a family may comprise a man or woman living with a guardianship child or ward under 21 years of age.

apparent steady improvement in living conditions. The families not maintaining their own households fell into two main sub-categories—families related to the head of the household and non-related lodging families. The few who did not fit either of these sub-categories were mostly families of employees living in their employer's household.

There were 8,656,245 children in families in 1966. These are limited by definition to children never married and under 25 years of age who were living with their parents or guardians at the time of the census. In Table 31, the number of children is classified to show the number in each of four separate age groups corresponding roughly to pre-school-age children, those of elementary school age, those at the secondary school level, and those of college or working age.

Section 2.—Current Population Estimates

Intercensal estimates of the population of Canada and of the provinces have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They also have been found useful for estimating labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply—June 1 of each year. Population estimates by province are also available on a quarter-year basis. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. No complete information is available on emigration. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants (see Chapter IV on Immigration and Citizenship, Part I, Section 3) and from the Registrar-General of Britain the number of emigrants from Canada arriving by sea and air to take up permanent residence in that country. Such data, however, are not available from other countries but, as indicated by partial data from United Nations sources, the proportion of total emigrants to all other countries is small. Family allowances statistics showing the number of migrant families by province are used in estimating interprovincial shifts in population (see Table 3, p. 156).

The following statement shows the data used in preparing the population estimates for the years 1957 to 1968. The next succeeding census serves as a basis for revision of the annual estimates of each intercensal period.

Year	Population at June 1	From June 1 to May 31 of Next Year

¹ Final figures used where available and registrations substituted for the remaining period.

² Mainly emigration.

32.—Annual Estimates of Population, by Province, as at June 1, 1956-68

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1956, 1961 and 1966 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; for 1931-40 in the 1952-53 edition, p. 143; and for 1941-55 in the 1961 edition, p. 165. Figures for 1867-1951 will also be found in *Census of Canada 1951*, Vol. X.

Because of the growing interest in the expanding population of the larger metropolitan areas of Canada, a series of intercensal estimates was begun in 1957. Table 33 shows the estimates for 1967 compared with the census counts of June 1, 1961 and 1966. As in preparation of intercensal population estimates for provinces, the births occurring in the metropolitan areas between June 1, 1966 and June 1, 1967 were added to the population at the census date and deaths subtracted. Immigrants over this period reporting these metropolitan areas as places of destination were added and allowances made for losses in population by emigration. Also the net in-movement or out-movement caused by internal migration was calculated from family allowances and other data.

¹ Areas as of the 1966 Census.

Table 34 gives estimates of the population of Canada and the provinces by age group and sex as of June 1, 1967. The method followed in preparing these estimates was much the same as that used in calculating the population estimates, described on p. 184. These estimates are subject to revision when data from the next census are available.

Section 3.—The Native Peoples of Canada

The Indians*

More than 230,900 Canadians are registered as Indians by the Indian Affairs Branch of the Department of Indian Affairs and Northern Development. Registered Indians include all persons descended in the male line from a paternal ancestor of Indian identity, who have chosen to remain under Indian legislation. They are grouped, for the most part, into 557 bands and occupy or have access to 2,276 reserves or settlements having a total area of 6,051,327 acres.

* Revised in the Indian Affairs Branch, Department of Indian Affairs and Northern Development, Ottawa.

Administration.—Pursuant to the British North America Act, the administration of Indian affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada in 1867. From January 1950 to December 1965, Indian affairs were the responsibility of a Branch of the Department of Citizenship and Immigration. By legislation (SC 1966, c. 25) a new department was formed whereby the Indian Affairs Branch joined with part of the Department of Northern Affairs and National Resources to become the Department of Indian Affairs and Northern Development.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, eight regional offices, 16 district offices and 50 field agencies. Attached to the headquarters and regional and district offices are specialists in such matters as education, economic development, community development, resource management, social welfare, and engineering and construction. Liaison is maintained with the Medical Services Branch of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians.

It is the primary function of the Indian Affairs Branch to assist the Indians to administer their affairs in a manner that will enable them to participate fully in the social and economic life of the country. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians and the administration of treaty obligations.

Five main objectives are being pursued vigorously in an attempt to assist the Indians in adjusting to the pace of social and economic growth. (1) An accelerated program in education places more emphasis on vocational training, retraining for employment, assistance in placement, adult education, kindergartens and a greater use of provincial schools. (2) The program of industrial and resource development, which in the beginning was a

program dependent mainly on the traditional resources of fur, fish, forestry and farming, now affords opportunities in new areas through loans, advisory services and other incentives to foster commercial development and other forms of economic endeavour on and off reserves and to facilitate the relocation of Indian people to places where full employment is available. (3) A \$112,000,000 program of reserve improvement has been instituted to provide better housing, water and sewerage systems, electrification and roads. (4) Indian bands, where possible, are being encouraged to operate on the same basis as local municipalities and, where required, grants are given to meet some of the financial needs of the Indian community. (5) Provincial services to Indians are being extended; where bands so desire, discussions are held with the province concerned with respect to the provision of services additional to those already in effect.

Eight Regional Indian Advisory Councils established by the Department provide machinery for effective consultation with representatives of the Indian people. Each Council is composed of eight to 12 Indians selected by the Indians in the region, as well as representatives of Indian organizations. The consultation procedure is used to interpret federal policies to the Indians and to obtain the views of the Indians on matters of policy, proposed legislation, federal-provincial agreements, new programs and proposed program changes. The National Indian Advisory Board brings together Indians representing all regions. The Board is made up of 18 representatives named by the Regional Councils on a population basis. Its function is to advise the Department on matters of national importance to the Indian people as distinct from matters of regional interest. In addition, Federal-Provincial Co-ordinating Committees are in operation in most provinces. They meet fairly regularly and perform an important function in guiding the plans and programs of the federal and provincial governments in relation to Indians and in establishing effective liaison between the governments and a better understanding of their respective objectives, policies and programs.

Education.—The key to continued progress in Indian education is the active participation of the Indians themselves through their school committees and membership on school boards, strengthened by ever-increasing support from non-federal governments and from professional groups specifically concerned with classroom instruction of Indian pupils. The Indian Affairs Branch maintains and operates a number of schools for Indians but 34,635 of the 66,217 Indian elementary and secondary school pupils now attend non-federal schools, attendance in which has been arranged for the most part through agreements between the Branch and individual school boards. In Manitoba, British Columbia and New Brunswick, however, under agreement with the respective provincial governments, a uniform tuition fee is paid by the Branch for Indian pupils attending schools under the jurisdiction of the province. Federal financial assistance for pupils attending non-federal schools varies from payment of tuition fees to full maintenance. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

Federal schools for Indian children are in operation in all provinces except Newfoundland and school residences care for orphaned children, children who come from broken homes and for those who, because of isolation or for other reasons, are unable to attend local schools. Standard classroom supplies and authorized textbooks are used in federal schools, which follow generally the curriculum of the province in which they are located.

A two-year kindergarten program has been instituted to give a head start to children who will receive their classroom instruction in a language other than their mother tongue. It has developed very rapidly and it is anticipated that all five-year-olds will be enrolled in school by 1971 and all four-year-olds by 1973. The current kindergarten enrolment is about 4,500.

Resources and Industrial Development.—Some 180,000 of Canada's 230,902 Indian people reside on reserves or Crown lands and depend on renewable resources for much of their income. The Indian Affairs Branch is steadily expanding its economic and resource utilization programming to help them improve their methods and develop new resource potential through loans, grants, technical advice and specialized training. The Branch also works, both formally and informally, in close co-operation with other federal departments, provincial governments and private organizations to establish wide-ranging resource development programs for Indian people. The latest program to be introduced (late 1968) is designed to assist Indian fishermen on the British Columbia coast to improve or replace their vessels and equipment and to provide them with training in the latest techniques of fish harvesting. Over the next five years the plan should benefit about 1,200 fishermen at a cost of approximately \$4,600,000.

Continued interest in Canadian wild furs on world markets encouraged 9,194 Indian trappers to harvest 86,430 pelts valued at \$2,876,507 in the 1967-68 season. Also, about 4,500 Indian fishermen harvested more than 10,000,000 lb. of fish for domestic and foreign markets, in addition to their own requirements. Indian farmers numbered 2,128, of whom 828 have been given financial assistance for capital improvements, purchase of equipment, breaking of land and operation expenses. Under the rotating herd program, which includes 7,431 animals in herds of up to 50 animals, some 307 farmers have received herds.

Forestry operations by Indian people in 1967-68 produced a total of 332,121 cunits* valued at \$6,247,321, of which 230,297 cunits were softwood (consisting of sawlogs 148,650, pulpwood 39,277, fuelwood 38,144, poles and piling 1,183 and other wood products such as bolts, mining timber, etc., 3,043) and 101,824 cunits were hardwood, two thirds of which was fuelwood. Approximately 284,000 trees were planted on 545 acres of reserve lands for reforestation purposes. Up to mid-1968, forest inventory and management plans were made for 61 Indian reserves and forest fire protection agreements covering reserve lands were negotiated or renewed with all provinces except Quebec and Nova Scotia. Another 54 reserves had been examined by consulting companies to identify potentials for land and resource development.

Indians own and operate 17 tourist and outfitting establishments; these provide employment for 209 individuals, some of whom are included among the 519 licensed Indian guides in Canada. In addition, Indians own and operate 22 campgrounds, 23 picnic sites, eight marinas, nine beaches, 43 cottage subdivisions, 10 tourist accommodations and 22 operations that are combinations of such facilities.

There are approximately 5,983 Indians producing crafts, 66 of whom operate their own retail outlets; the value of their output exceeded \$1,289,000 in the year ended Mar. 31, 1968. About 7,400 Indian people are actively involved in 136 co-operatives and credit unions; sales of producer co-operatives in 1967 exceeded \$5,600,000.

*A unit of stacked wood containing 100 cu. feet of solid volume within its outside dimensions.

In 1967-68, 613 permits and leases covering 1,966,351 acres of land were in effect on 110 reserves in Ontario, Manitoba, Saskatchewan, Alberta and British Columbia for exploration and production of oil and gas. Revenue derived for Indian bands through bonuses, rentals and royalties amounted to \$4,200,572 and revenue derived from mining, including the sale of sand and gravel, amounted to \$231,245.

Community Development.—The community development program launched by the Indian Affairs Branch in 1964 has led to much closer involvement of the Indian people in the management of their own affairs. In their efforts to accept such responsibility, many Indian bands across the country are developing their own municipal-type administration. Fifty-eight (24 of Indian status) community development workers hired by the Indian Affairs Branch and 33 hired by provincial governments are assisting and encouraging the Indian people to plan their own future. A grants-to-bands program enables bands to gain program experience and assists them financially; expenditure on the program increased from \$71,065 in 1965 to \$507,602 in 1967-68.

Federal-provincial community development agreements to extend provincial services to the Indian people exist with Ontario and Alberta and such services are supplied through informal arrangements in other parts of Canada. Costs are shared on a population basis where both Indians and non-Indians are involved.

A program to develop and perpetuate Indian culture through encouraging Indian fine arts and crafts, literature, dancing, folk songs and related activities has been conducted since 1965. Incentives include grants, subsidies and scholarships to individuals, groups and organizations for the development of their creative and performing talents.

The Federal Government assists in the physical development of Indian communities by providing technical services, through the Engineering and Construction Division of the Indian Affairs Branch, for community planning on Indian reserves, housing accommodation, water and sanitation services, electrification and construction and maintenance of roads and bridges, etc. Community planning service is given either directly through the efforts of the community concerned, indirectly through consultant planners or through provincial or regional planning offices. In 1966 an expenditure of \$112,000,000 was allotted for the physical improvement of Indian reserves.

Three housing programs on reserves and one off-reserve program are under way, summarized as follows:—

- | | |
|--|---|
| 1. Subsidy housing program | Direct subsidy by the Federal Government. |
| 2. Band-administered housing program . . . | Indian councils may, by band council resolution, request authority to administer federal appropriation, either as the sole source of financing or in conjunction with band funds. |
| 3. Indian on-reserve housing program | Individual housing loans from the Central Mortgage and Housing Corporation as a sole source of financing or in conjunction with federal subsidy. |
| 4. Off-reserve housing program | Indians living away from reserves may secure mortgage funds from the Central Mortgage and Housing Corporation or approved lenders in conjunction with forgivable ten-year second-mortgage funds from the Indian Affairs Branch. |

There were 2,005 houses constructed on Indian reserves in the year ended Mar. 31, 1968.

In recent years, emphasis has been placed on overcoming the isolation of many reserves by the building of roads to facilitate movement between Indian and non-Indian communities, the upgrading of roads on reserves adjacent to urban communities, the participation of Indian children in off-reserve school programs, the commuting of Indian people to and from centres of employment, and the development and marketing of reserve resources. Where economically feasible, electric power is being extended to all Indian reserves and potable water and adequate sanitation facilities are also assured on all reserves.

Welfare.—The Indian Affairs Branch administers programs and financially supports and promotes expansion of those administered by provincial organizations to meet welfare needs of Indian individuals and families. Federal-provincial agreements are pursued in collaboration with the Department of National Health and Welfare to give effect to Part II of the Canada Assistance Plan in order that Indian people may participate in the broad range of welfare programs established in the provinces. In Ontario, provincial social assistance and child welfare programs are available to Indian communities through implementation of an agreement which provides for the extension of the province's total welfare program. Services for the protection and care of dependent and neglected Indian children are provided through agreements with the Yukon Territory, the Provinces of Manitoba and Nova Scotia and an arrangement with British Columbia. In provinces where no formal arrangement exists, child welfare authorities intervene in serious neglect situations at the request of the Indian Affairs Branch.

Dependent Indian and certain categories of non-Indian persons living on the reserves are given social assistance by the Indian Affairs Branch. Standards established in the provinces apply in assessing the need and determining the amounts of assistance granted to individuals and families.

Financial responsibilities assumed by the Indian Affairs Branch for the welfare of Indians include maintenance of children in foster homes and institutions, services provided by accredited child welfare organizations, assistance to maintain elderly and physically incapacitated adults in institutions and boarding homes and to enable physically handicapped Indians to participate in rehabilitation programs. Welfare programs administered by other governmental organizations for which Indians are eligible include: family allowances, youth allowances, old age security and guaranteed income supplement administered by the Department of National Health and Welfare; old age assistance and blind and disabled persons' allowances administered by the Governments of British Columbia, Manitoba, Quebec, Nova Scotia and Prince Edward Island; family benefits in Ontario; needy mothers' allowances in Quebec; and social assistance pursuant to the Nova Scotia Social Assistance Act, Pt. I.

The Eskimos*

Canada's Eskimo population is growing rapidly. More than 15,000 now live in scattered camps and settlements of 25 to 500 people, mainly in the Northwest Territories but also in Arctic Quebec (3,000), Labrador (1,000) and northern Manitoba (365). The factors of severe climate and isolation have in the past complicated the initial problems of ensuring that all Eskimo people had food, access to health care and warm shelter but good progress has now been made in providing for these basic needs. Medical care is the responsibility of the Department of National Health and Welfare (see p. 276); the Department of Indian Affairs and Northern Development provides education, welfare, economic development, municipal services and housing, often using the Government of the Northwest Territories as its agent to provide these services.

Although some Eskimo families still live in hunting camps and take their living from the land, the trend is strongly toward community living centred around the local school, nursing station, trading store and co-operative building. Most Eskimos now live in permanent housing and their acceptance of new ways that are of advantage to them is symbolized by the fact that in some communities the dog-team, traditionally used for transportation, is being replaced by the skidoo.

With changing conditions, education is a vital factor in the lives of the Eskimo people, both young and old. Although only 15 p.c. of the Eskimo children of school age were enrolled in school in 1953, the system has expanded to such an extent that in 1967-68 about 3,694 Eskimo children were registered in 64 schools in the Northwest Territories and Arctic Quebec, this number representing nearly 95 p.c. of the Eskimo school-age population.

* Prepared by the Information Services Division of the Department of Indian Affairs and Northern Development in close co-operation with the Director and officers of the Northern Administration Branch.

For the most part, children attend school in their home communities up to grade six and then go to larger communities for senior grades and for vocational education. When Eskimo children must leave home to continue their education, the Department provides transportation, room and board in pupil residences, clothing and a small weekly allowance. Senior secondary education is available at six high schools in the Northwest Territories: vocational courses at Yellowknife, N.W.T., and pre-vocational courses at Churchill, Man. In many cases, a special curriculum allows older boys and girls with limited academic training to spend half days on academic upgrading and half in occupational classes.

Eskimo students who attain senior matriculation may attend university through a system of loans and grants established by the Government of the Northwest Territories for all territorial residents. Grants cover transportation, tuition and textbooks, and loans may be obtained for costs of maintenance. Although there are only two Canadian Eskimos now attending university, others are advancing into senior high school grades and are potential university material in the years immediately ahead.

In the vocational field, those who have adequate academic education may enter technical institutes, teachers' colleges, schools of nursing, business colleges or trade schools in the provinces or they may take on-the-job training. There is a large demand for Eskimos with education and training backgrounds of a high level and it is difficult to find enough of them to fill all requests. During the past year, 115 Eskimos were enrolled in training courses outside the Northwest Territories in such varied courses as commercial pilot nursing aide, fish processing, clerk-typist, barbering, boat building, handicraft management, heavy-duty equipment operating, classroom assistant, and art.

Apprenticeship offers another opportunity for training. Apprentice tradesmen with little education take academic upgrading at night and on-the-job training during the day and at intervals are examined on knowledge of their trade in Eskimo. Throughout the North, there are Eskimo men working at various levels of apprentice training, as heavy equipment operators, plumbers, carpenters and mechanics. They hold positions as interpreters and clerks in retail and co-operative stores and in government offices; one young man is the Area Administrator at Spence Bay.

The objective of the Department, in co-operation with other federal departments in the North, is to have 75 p.c. of staff positions in the Territories filled by local residents by 1977.

In vocational classes, Eskimo girls train as clerical assistants, stenographers, hairdressers, nursing aides and commercial cooks. Both boys and girls who are interested in teaching begin their careers in settlement schools as classroom assistants, dividing the day between academic studies and work with young Eskimo pupils. Special care is given to the development of curriculum for northern schools and guides are prepared for such subjects as trapping, fur preparation and the care and use of firearms and outboard motors. By 1972 the Department expects to have sufficient classrooms and pupil residence accommodation to provide for every school-age Eskimo child in the Northwest Territories and Arctic Quebec. This will require the construction of more than 200 classrooms and the provision of 1,000 beds in pupil residences.

The adult education program is designed to inform those of the older generation who feel themselves cut off from children in school. Much emphasis in this area deals with the terms and maintenance of the new housing program. Although permanent houses were introduced in 1959-60, Eskimo families could afford to pay very little toward housing costs. Even families who could purchase these small one-room houses often could not afford the high cost of fuel, light and water. It became apparent that a public housing program was needed to assist the Eskimo people and, in October 1965, government approval was obtained for a five-year program to supply three-bedroom rental houses, allocated on the basis of family need. Rent is scaled according to income, ranging from welfare recipients' payments of \$2 per month up to the maximum monthly rental of \$67. Services include heating, electricity, water delivery, sewage disposal, and basic furniture. Construction of three-bedroom houses began in 1966 on Baffin Island and in Arctic Quebec.

and in the summer of 1968, 140 houses were shipped to the Eastern Arctic, 20 to Arctic Quebec and 100 to the Western Arctic. The rental housing program has now been completed for 15 communities. Credits are given to tenants in new houses for extra rental payments and for improvement or additions to the houses, and 33 p.c. of the rent previously paid is credited toward the purchase price if tenants decide to buy.

To help solve the problem of fuel oil for heat and electricity, bulk storage tanks have been installed in many locations and more are being added each year; in 1968 facilities were completed at Broughton Island, Arctic Bay and Grise Fiord. Eleven tanks were purchased in 1968 for erection in the Eastern Arctic and a contract let for eight tanks for the Western Arctic, to be completed by early 1969.

In Eskimo communities, the Eskimo people are encouraged to assume management of their own affairs through local or regional councils; practical assistance, advice and financial support are given by the Department of Indian Affairs and Northern Development. In over 40 communities a development fund acts as a catalyst in social and economic development. The full range of social services applicable to all Canadians is available to the Eskimo people—family allowances, old age and disability pensions and blind persons' allowance. A child welfare program cares for children who are neglected or whose parents are temporarily unable to care for them. Social assistance provides for persons whose income from employment is insufficient to meet their needs and those of their dependants. Medical and public health services are provided for Eskimos not included under provincial arrangements and who are unable to provide for themselves (see p. 276). Eskimos in hospitals in the south are kept in touch with distant family members through tape-recorded messages and medical progress reports. When medical treatment is completed the Department of Indian Affairs and Northern Development is responsible for the return of Eskimo patients to their homes. Rehabilitation may include adjustment training in sheltered employment and the adaptation of artificial limbs and equipment.

The base of the economy in Eskimo communities is gradually broadening. A number of successful Eskimo co-operatives have been established by the Department, engaging in the production of arctic char and arctic trout, fur garment manufacturing, logging, lumbering and house construction, and continuing economic surveys are made to pinpoint local resources that have possibilities of development. Eskimo sculptures, prints and fine crafts have gained worldwide recognition and bring \$1,250,000 annually to Eskimo artists. Art is a major part of the rich heritage of these people and is supported by cultural exchanges of films, radio programs and exhibitions. Literature in the Eskimo language is being collected and a regular publication *Inuttituut* is printed in syllabic script and distributed to Eskimo families in the North. The first volume of a pocketbook series printed in syllabics and entitled *The Autobiography of John Ajaruaq*, was published in the fall of 1968.

Although many communities are enjoying greater cash income through the use of local resources and the capacities of their people, the need for the establishment of new industries to provide employment continues to grow. The young people especially, as they leave school, must have opportunities for employment to relieve them of following the traditional harsh and marginal existence on the land. This might be done by giving financial incentives to secondary industry willing to establish in the North. If employment can be provided in this way as well as through primary industry based on mineral resources, the Eskimo population, with its innate ability to live comfortably in the Arctic, can be a tremendous asset to Canada.

Section 4.—Statistics of World Population

World population figures given in Table 40 are from the *United Nations Population and Vital Statistics Report* for April 1968 and, except as otherwise noted, are mid-year estimates for 1966. Area figures are from the *United Nations Statistical Yearbook 1967*.

Estimated Population of the World by Continents.—The following statement presents estimates of the 1966 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries because they include, in addition, adjustments for over- and under-enumeration, over- and under-estimation, and data for categories of population not regularly included in the official figures.

<i>Continental Division</i>	<i>Population</i>

PART I.—IMMIGRATION AND EMIGRATION*

Section 1.—Immigration Policy and Administration

Policy.—Traditionally, Canada has sought to increase its population through immigration in order to expand the domestic market, reduce per capita costs of administration, stimulate economic activity by providing new skills, ideas and enthusiasm, and support a higher level of cultural independence and creativity. Canadian experience indicates that a substantial volume of immigration is highly desirable.

New population cannot be added haphazardly without regard to their means of subsistence or their effect on Canadian life. Technological change and the development of Canadian society to its present complex state require that, to be able to establish themselves successfully, new settlers must be economically competitive in terms of education, training, skills and personal qualities. Over the years, Canada has endeavoured to acquire immigrants who were adaptable to Canadian life. Such persons, finding familiar institutions in Canada, feel more at home and this assists in their establishment in the new life they find here. Canada makes every effort to sustain the movement of immigrants from countries having like economic, social and political backgrounds. On the other hand, qualified people from other countries can integrate successfully into Canadian society and the Immigration Regulations recognize this principle. People anywhere in the world have an opportunity to immigrate to Canada if they demonstrate their suitability for life in this country and are likely to become established without hardship to themselves or disruption to the communities in which they settle.

In addition, Canada has on many occasions since the end of World War II sanctioned the entry of thousands of refugees. This is a humanitarian movement and is tangible evidence of Canada's recognition of its responsibilities in the international community. A conservative estimate of the number of refugees admitted from 1945 to the end of 1968 is 350,000, which includes the group of over 8,000 Czechoslovakians who left their own country following its invasion by the Soviet Union in August 1968.

* Sections 1 and 2 of this Part were prepared in co-operation with the Information Service, Department of Manpower and Immigration, Ottawa. The history of immigration and the Immigration Act and Regulations up to the mid-1950s is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

On Oct. 1, 1967, Canada adopted new Immigration Regulations which are applied universally; these give more recognition to family relationship than the former Regulations and are more closely attuned to Canada's economic needs. These new Regulations evolved from the White Paper on Immigration, tabled in the House of Commons on Oct. 14, 1966. The proposals provided, for the first time, uniform standards for the admission of non-dependent relatives sponsored by Canadian citizens, regardless of the immigrant's citizenship or country of residence. On Oct. 20, 1966, a Joint Committee of the Senate and the House of Commons was established to study and report upon the White Paper and upon two earlier reports on immigration matters submitted to Parliament in 1965 and 1966 by Mr. Joseph Sedgwick, Q.C. The Committee considered representations by members of Parliament, representatives of provincial governments, private organizations and other members of the Canadian public during the last months of 1966 and the early months of 1967.

It became evident during the meetings of the Committee that many representatives of the Canadian public had reservations about details of the White Paper proposals. The suggestions offered to the Committee were studied in the Department and in April 1967 the Minister presented new proposals to which the Committee gave its approval.

The new Regulations were authorized by Order in Council dated Aug. 16, 1967 (PC 1967/1616), effective as of Oct. 1, 1967. These Regulations present in detail the principles involved in selection of immigrants, whereas the previous Regulations defined who was admissible to Canada only in very general terms. They also indicate the factors that immigration officers will take into account in assessing potential immigrants and the comparative importance of these factors. The new Regulations formally confirm that Canadian citizens or permanent residents of Canada are entitled to bring their dependants to Canada. The privilege of citizens or permanent residents in applying for other more distant relatives to come to Canada is extended to all areas of the world and new classes of relatives become eligible for this assistance; in the past there were geographical limitations on certain categories of relatives.

The assessment system for potential immigrants is based on the following factors: (1) *Education and Training*—up to 20 assessment units to be awarded on the basis of one unit for each successful year of formal education or occupational training; (2) *Personal Assessment*—up to 15 units on the basis of the immigration officer's assessment of the applicant's adaptability, motivation, initiative and other similar qualities; (3) *Occupational Demand*—up to 15 units if demand for the applicant's occupation is strong within Canada and whether the occupation is skilled or unskilled; (4) *Occupational Skill*—up to 10 units for the professional, ranging down to one unit for the unskilled; (5) *Age*—10 units for applicants under age 35 with one unit deducted for each year over age 35; (6) *Arranged Employment*—10 units if the applicant has a definite job arranged in Canada; (7) *Knowledge of French and English*—up to 10 units, dependent upon the degree of fluency in French and/or English; (8) *Relative*—up to five units if the applicant has a relative in Canada able to help him become established but unprepared or unable to sponsor or nominate him; and (9) *Employment Opportunities in Area of Destination*—up to five units if the applicant intends to go to an area of Canada where there is a generally strong demand for labour.

The new Regulations make a clear distinction between dependants and relatives entering the working force. Thus, in the future, there will be three categories of immigrants—"sponsored dependants", "nominated (non-dependent) relatives", and "independent applicants". A "dependant" is defined for immigration purposes as: husband or wife, fiancé or fiancée; unmarried son or daughter under age 21; parent or grandparent over age 60, or younger if widowed or unable to work; an orphaned brother, sister, nephew, niece or grandchild under age 18. Provision is also made for an adopted child and, where the only dependant is a husband or wife, for the nearest living relative. An application for a dependant will be dealt with irrespective of whether he is in Canada or abroad and irrespective of the financial circumstances of the sponsor. He will be admitted to Canada provided he is in good health and of good character.

Canadian citizens and permanent residents may nominate non-dependent relatives for immigration to Canada. The "nominated relative" category includes son or daughter over age 21, married son or daughter under age 21, brother or sister, parent or grandparent under age 60, nephew, niece, uncle, aunt or grandchild. The responsibilities of the nominator include willingness and ability to provide accommodation, care and maintenance for the person applied for and to otherwise assist him to become established. The nominator will be required to sign such an undertaking for a period of five years. Because of the assistance provided by the nominator in Canada, the nominee will be assessed on only some of the selection factors—education, personal qualities, occupational demand, age and occupational skill. On the general assumption that a Canadian citizen usually will be better established in Canada than a more recent arrival and hence in a better position to give his relative more assistance, a slightly higher preference will be given to a relative nominated by a Canadian citizen than to one nominated by a permanent resident.

To qualify for admission to Canada, an "independent applicant" will normally have to obtain 50 of the 100 assessment units available. However, the new selection system is considerably less rigid than the previous practice. Whereas in the past an individual could have been rejected on account of a single factor, such as lack of education, the new Regulations use a combination of factors in such a way that some of them may compensate

Edmonton welcomes a recent influx of young people from other countries, many from Czechoslovakia, who are quietly settling into life in that thriving city, learning English, working and raising their families. As in other cities across the country, basic English or French language courses, held in the evenings, assist these new Canadians in becoming established in their chosen surroundings.

for relatively low qualifications in others. The major purpose of the new standards, as it was with the old, is to select immigrants who can make a successful adjustment to life in Canada and thereby contribute to the country's progress.

The main factors for successful establishment are education, personal qualities and occupational demand. As far as the education of the individual is concerned, the principle of successful educational achievement in the immigrant's home has been adopted since it has been found impracticable to equate educational standards in many countries to Canadian standards. In assessment of his personal qualities, the applicant will be considered as to his chances for success in Canada in terms of his economic establishment and his personal satisfaction as well as on the composition and the attitudes of his whole family. The personal assessment process also includes the function of counselling and the applicant will be informed about the market in different areas of Canada for his skills and about the difficulties he may encounter in adjusting to the Canadian way of life. The demand in Canada for the applicant's skill or occupation is given due importance. The Department is responsible for immigration but is equally concerned with manpower and is obliged to discourage immigration for the applicant with an occupation for which there is little or no demand in this country. Where there are shortages of labour in certain industries, Canadian employers or provincial officials may interview candidates abroad for such industries and channel them to the Department's visa offices but these candidates also must comply with the new selection standards.

The other six selection criteria have individually lesser weight but in total are equal to the three main factors. In considering adaptability in a new environment, occupational skill is important. A person's skill is usually acquired at a price in financial terms. It is an investment and the higher the investment usually the higher the skill and thus a greater gain to Canada. Age must be taken into account when considering adaptability in a new environment. On average, younger people adjust more easily and for this reason the age group up to 35 years is assigned the maximum number of assessment units, with one unit deducted for each year over 35. However, an older person will not be refused on this factor if he has other assets such as highly developed skills which are in demand in Canada. Credit will be given to an applicant who has a firm commitment from a Canadian employer because this will assist his economic establishment during the initial period after arrival. Economic and social adjustment of a new immigrant is greatly facilitated by knowledge of the languages of his adopted country. As a consequence, units of assessment are given to applicants for the degree of their fluency in either English or French or both. An applicant whose mother tongue is other than English or French may be given some credit for even a partial knowledge of either or both of the two languages. In fact, it is possible that such an applicant may obtain more assessment units on the language factor than a unilingual applicant who speaks only English or French. If an applicant has a relative in Canada who is able to help him become established, credit will be given for this factor since the presence of a relative is a definite asset in the adjustment process.

No one will be compelled to go to any particular area in Canada but, if a prospective immigrant is counselled by an immigration officer to go to an area which offers the best opportunity for him and is prepared to accept that advice, he will be awarded the units appropriate for that area. If the over-all demand for labour is higher in any one area in Canada than in others, the total assessment of the immigrant destined to that area will reflect that high demand. The assessment of individual areas in Canada as to their over-all demand for labour, and the assessment of national demand for individual occupations will be conducted on a continuous basis so that selection officers overseas will be in possession of up-to-date information at all times.

An innovation in the new Regulations is the provision for the admission to Canada for permanent residence of persons who have come as visitors. However, since open acceptance of applications from visitors would be inefficient and would give an undue advantage to some people, a visitor is not given any credit for arranged employment in Canada, so that he must qualify on other factors. Conditions of entry must have been

observed and, in particular, the applicant must not have taken employment in Canada if not authorized to do so. Foreign students studying at recognized Canadian institutions will be regarded as any other visitors applying for permanent residence in Canada. However, if foreign students are under an obligation to their government to return to their own country, they will not be permitted to apply for permanent residence in Canada. Applications for permanent residence from seamen on shore leave will not be accepted under the new Regulations.

A sponsor whose application for a dependant is refused will have the right to appeal to the newly constituted independent Immigration Appeal Board. On July 6, 1966, the Minister introduced a Bill in the House of Commons "to make provision for appeals to an Immigration Appeal Board in respect of certain matters relating to immigration". The Bill was passed in the House of Commons on Mar. 1 and given Royal Assent on Mar. 22, 1967. The Act provides for a new Immigration Appeal Board which is a Court of Record entirely separate from the Department and with the authority to enforce its orders. The Act, in addition to providing for appeals against deportation orders, also makes provision for sponsors in Canada to appeal to the Board against the refusal of admission to relatives overseas. The categories of relatives whose refusal may be appealed will be designated by the Governor in Council.

Administration.—The Canada Immigration Division of the Department of Manpower and Immigration administers the Immigration Act and Regulations. The creation of the Department of Manpower and Immigration, which came into being officially on Oct. 1, 1966, resulted in a substantial reorganization of the Immigration Division. A former important part of the activities of the Division, that of the placement and settlement of immigrants in employment in Canada, was transferred to the Canada Manpower Division of the Department. Immigration officers who were trained placement and settlement specialists were transferred with this function to the Canada Manpower Division. The reorganized Immigration Division has three main Branches. The Programs and Procedures Branch is responsible for the long- and short-range planning of immigration policies and programs, interpretation of the Immigration Act and Regulations and immigration policies, the co-ordination of immigration policies developed internally, functional support in respect of the transportation and initial reception of immigrants in Canada and liaison with transportation companies. The Home Services Branch is responsible for the disposition of difficult individual immigration cases, the provision of procedural guidance to field officers, the formulation of policies and guidelines on the enforcement aspects of immigration operations, and the provision of technical advice on procedures relating to the admission of immigrants and non-immigrants. The Foreign Branch is responsible for the management of the Overseas Service, uniform application of selection standards, promotional activities abroad, implementation of approved programs abroad and the proper counselling and direction of immigrants.

There are 29 visa offices located abroad at London, Liverpool, Leeds, Birmingham, Glasgow, Belfast, Dublin, Paris, Bordeaux, Marseille, Brussels, Berne, The Hague, Copenhagen, Cologne, Hamburg, Stuttgart, Vienna, Stockholm, Lisbon, Madrid, Rome, Milan, Athens, Cairo, Tel Aviv, New Delhi, Tokyo and Hong Kong. The Regional Immigration Headquarters for Continental Europe in Geneva is an administrative centre which does not issue visas. Four offices in the United States—at New York, Chicago, San Francisco and Denver—and a sub-office at Los Angeles, furnish information and counselling but do not issue visas. In addition, the services of immigration officers are available in Canberra, Kingston (Jamaica), Beirut, Islamabad, Manila and Port-of-Spain, and information offices, visited at intervals by immigration officers based in Stockholm, are maintained in Oslo and Helsinki. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding their prospects for successful establishment. Examination of immigrants and visitors is carried out at 552 ports of entry on the Canadian coasts, at points along the International Boundary and at certain airports and inland offices.

Section 2.—Immigration Statistics

Table 1 shows the number of immigrants arriving in Canada in each year since 1913, the peak year of immigration into the country. Table 2 shows the number and distribution of immigrants in the population of Canada on the latest decennial census date, June 1, 1961, by period of arrival.

1.—Immigrant Arrivals, 1913-67

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

Table 2 shows that, according to census figures, 1,507,116 persons reported that they had come to Canada between Jan. 1, 1946 and June 1, 1961. These immigrants constituted about 75 p.c. of the total number of immigrants who arrived in Canada during that period. According to the records of the Department of Manpower and Immigration, 2,033,598 persons entered Canada as immigrants during the period 1946-61. The difference between this total and the 1,507,116 postwar immigrants reported in the 1961 Census, amounting to 526,482 persons, represents the losses due to death and emigration among the postwar immigrant arrivals up to June 1961. Since this difference is arrived at by comparing statistics derived from two different sources, it must be taken as only an approximate measure of these losses. It is estimated that deaths of immigrants arriving since 1946 would not exceed 86,000 by June 1961. Hence it would appear that roughly 440,000 emigrated in the period between January 1946 and June 1961, or slightly more than one fifth of the total arrivals over this period.

The 440,000 postwar immigrants who appear to have emigrated from Canada up to June 1961 would thus constitute a little over half the total estimated emigration from Canada since 1946, according to data on emigration used in the preparation of annual population estimates. In this connection it might be mentioned that a substantial element in total Canadian emigration is the movement of Canadian-born persons to the United States, some 387,000 entering the United States as immigrants between July 1946 and July 1961 according to the United States Immigration Service records (see p. 215).

¹ Up to the date of the Census, June 1, 1961.

Recent Immigration.—The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences are seldom immediately decisive. News of good economic conditions in Canada pre-disposes people in favour of this country but, because the immigration process usually takes several months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

In the early 1960s, the Canadian economy experienced a levelling-off, and even a retrenchment in some areas, from its previous high level of activity and this was reflected in the country's intake of immigrants. However, this interval of economic adjustment lasted only a short time and by 1963 immigration had again risen to more normal levels. In that year 93,151 immigrants came to Canada compared with 74,586 the year before. Promotional efforts abroad were intensified. A resident immigration officer was posted to Madrid to service immigration applications in Spain and area offices were established to enable teams of immigration officers to make regular visits to adjoining countries in an effort to broaden the base from which immigrants were selected.

In the following year, the number of immigrants admitted to Canada totalled 112,606, a 21-p.c. increase over 1963. By nationality, British immigrants constituted the largest number, followed by Italians and citizens of the United States. This increase was attributable to two principal factors—an intensification of promotional and recruiting activities in the main source countries, and an expansion of examination and selection facilities into areas from which Canada received few immigrants before the establishment of the immigration regulations that came into effect early in 1962. The achievements of 1964 were accomplished despite strong competition in Europe for skilled and educated workers and new postwar levels of prosperity. It is, therefore, of considerable significance that, of the 56,190 immigrants who entered the Canadian labour force in that year, 59 p.c. were in the more skilled categories; 13,177 were in the managerial and professional categories, compared with 10,799 in 1963. In 1964, a resident immigration officer was posted to Marseille to expand facilities in France.

In 1965, Canada's demand for skilled immigrant workers once again exceeded the supply. Although skilled workers could be absorbed in large numbers, the need for unskilled workers diminished and for this reason the Immigration Branch continued to emphasize the selection of immigrants possessing professional or other qualifications that would enable them to become established soon after their arrival. Most of the traditional immigrant source countries, particularly in Europe, continued to enjoy buoyant economic conditions. Skilled workers were much in demand and there was strong competition among immigration countries for a share of those skilled workers who were interested in emigration. The number of immigrants admitted to Canada totalled 146,758, a 30-p.c. increase over the preceding year. Immigrant workers who arrived from abroad numbered 74,195, of whom 67 p.c. were in the more skilled categories; those in the managerial and professional categories numbered 18,103. As in the previous year, the major source countries were Britain, Italy and the United States. During 1965, Canadian immigration facilities abroad were substantially improved and expanded. Resident officers were posted to Milan, Italy, and Bordeaux, France, and offices at five other locations were modernized and refurnished. The decision was also made to establish a Regional Headquarters for Continental Europe in Geneva, Switzerland.

The rising trend of immigration continued in 1966. In all, 194,743 immigrants came to Canada in that year, an increase of 32 p.c. over 1965. Immigrant workers numbered 99,210, of whom 74 p.c. were in the more skilled categories compared with 67 p.c. in 1965. Those in managerial or professional categories numbered 25,929, which was almost 43 p.c. above 1965 and nearly double the 1964 figure. Of the total of 194,743 immigrants, 63,291 came from Britain, 31,625 from Italy and 17,514 from the United

States. There were significant developments in immigration administration and policy during the year. Briefly, as a result of the reorganization of several Federal Government departments, the Immigration Branch of the former Department of Citizenship and Immigration was amalgamated with large segments of the Department of Labour to form the new Department of Manpower and Immigration. The principal advantages to this alignment are that immigration is now more closely identified with national manpower policies, and the extensive services of the Canada Manpower Division in counselling, placing and assisting workers are now fully available to new immigrants (see p. 205). A new policy for dealing with requests from visitors for permanent residence in Canada was introduced with good effect.

In 1967, the second largest number of immigrants arrived in Canada since the end of the Second World War. Of the 222,876 immigrants who came—representing an increase of 14 p.c. over 1966—119,539 were workers of whom 87 p.c. were in the more skilled categories compared with 74 p.c. in 1966. Those in the managerial or professional categories numbered 30,853, a figure 19 p.c. above 1966. Of the total of 222,876 immigrants, 62,420 came from Britain, 30,055 from Italy and 19,038 from the United States.

Analyses of the content of the immigration movement during the years 1965, 1966 and 1967 are given in Tables 3 to 9, and the numbers of persons deported from Canada for various reasons for the same years in Table 10.

Table 3 classifies immigrant admission by country of last permanent residence. During the three-year period shown, 30.2 p.c. of the immigration flow came from Britain and the Republic of Ireland, 43.0 p.c. from Continental Europe, 9.2 p.c. from the United States and 17.6 p.c. from all other countries.

Sex distribution of recent immigrant arrivals is shown in Table 6. In the three years 1965-67, adult males comprised 37.2 p.c. of the immigrants, adult females 35.1 p.c. and children under 18 years of age the remaining 27.7 p.c. Without relation to age, 48.6 p.c. of the newcomers were females.

6.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1965-67

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Item	1965	1966	1967
	No.	No.	No.

Adult.....	51,490	67,073	79,314
Totals, Immigrants.....	146,758	194,743	222,876

The number of female immigrants coming into Canada was higher than the number of male immigrants in every year from 1957 to 1964. However, the trend was then reversed and in 1965-67 the number of males exceeded the number of females. In 1967, in the single category, males were predominant up to age 40, whereas in the married category females exceeded males by 1,790, in the widowed category by 3,419 and in the divorced and separated category by 493. Of all persons arriving in 1967 who were 15 years of age or over, 54.1 p.c. were married, 41.6 p.c. were single and 4.3 p.c. were widowed, divorced or separated.

Destinations and Occupations.—Upon arrival in Canada, immigrants are asked to state their intended destinations. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period 1965-67—53.5 p.c. of all the males and 54.2 p.c. of all the females. Quebec was the second province of destination, receiving 21.1 p.c. of the males and 19.7 p.c. of the females, followed by British Columbia with 12.2 p.c. of the males and 12.8 p.c. of the females. The proportions intending to settle in the Prairie Provinces were 10.8 p.c. and 11.0 p.c., respectively, and in the Atlantic Provinces 2.3 p.c. and 2.1 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations they intend to follow in Canada. Approximately 53.6 p.c. of the persons admitted in 1967 declared that they would enter the labour force. The other 46.4 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 27.9 p.c. were classed as managerial, professional and technical, 5.1 p.c. were clerical workers, 5.2 p.c. were in service occupations, 41.6 p.c. were in manufacturing, mechanical and construction trades, 9.5 p.c. were general labourers and 3.8 p.c. were farmers. About 17.4 p.c. of the female immigrants entering the labour force intended to follow service occupations. Details are given in Table 9.

Deportations.—Deportations by cause and nationality are shown in Table 10 for the years 1965-67. Persons who have not yet acquired domicile (five years of residence in Canada as landed immigrants) may be deported if they fall into prohibited classes at time of admission or within five years of admission, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons, or have gained admission by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

10.—Deportations,¹ by Cause and Nationality, 1965-67

Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 11 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1958-67 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of border-crossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 23,442 Canadian-born persons entering the United States in the year ended June 30, 1967 with the intention of remaining permanently, 10,617 were males and 12,825 females. Slightly more than one fifth, or 4,941, of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 23,442 native-born persons was the professional or technical group which numbered 3,401; craftsmen or foremen numbered 1,091, and clerical and kindred workers 994. On the other hand, 15,193 persons, or 64.8 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 46.8 p.c. of the total were persons under 20 years of age.

Of the 34,768 persons entering the United States from Canada claiming Canada as country of last permanent residence—which of course includes native-born persons and those born in other countries who have resided in Canada—the Immigration and Naturalization Service of the United States Department of Justice lists 5,965 as professional, technical and kindred workers, 2,497 as craftsmen, foremen and kindred workers and 1,578 as clerical and kindred workers. Housewives, children and others with no reported occupation accounted for 19,903 or 57.2 p.c. of the total.

11.—Canadian-Born Persons Entering the United States from Canada and Elsewhere, and All Persons Entering the United States from Canada, Years Ended June 30, 1958-67

NOTE.—Includes only persons who have declared their intention of remaining permanently in the United States when applying for a visa (see text above). SOURCE: Immigration and Naturalization Service, United States Department of Justice.

PART II.—CANADIAN CITIZENSHIP

Section 1.—The Canadian Citizenship Act

On Jan. 1, 1947, the Canadian Citizenship Act came into effect replacing previous Naturalization Acts in force in Canada. The Citizenship Act created the distinct nationality of a "Canadian citizen" to be recognized throughout the world and it provided a means whereby those non-Canadian British subjects and aliens who were permanently residing in Canada or those who might subsequently immigrate to Canada could apply for the grant of Canadian citizenship. The Citizenship Act provides that all Canadian citizens are recognized as British subjects or Commonwealth citizens, but the reverse is not necessarily true.

The administration of Canadian citizenship was the responsibility of the Department of Citizenship and Immigration from Jan. 18, 1950 to Oct. 1, 1966 when, as a result of the proclamation of the Government Organization Act (SC 1966, c. 25), it was transferred to the Department of the Secretary of State. Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155. Over the years the Citizenship Act has undergone several amendments, the latest on July 7, 1967. The provisions of the Act, including the 1967 amendments, are outlined briefly in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born of Canadian fathers outside of Canada who were not aliens on Jan. 1, 1947 and were either minors on that date or had already entered Canada for permanent residence.

The Act provides that a person born abroad who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

Newfoundland and Canadian Citizenship.—On Apr. 1, 1949, Newfoundland became the tenth province of Canada and every person born therein or naturalized or every British subject who had domicile in Newfoundland on that date or every woman who married a citizen of Newfoundland and took up residence there before Apr. 1, 1949 became a Canadian citizen. They acquired the right of conferring Canadian citizenship by descent to their children born outside of Newfoundland in the same manner as those who had previously become Canadians. Persons born outside of Newfoundland to Newfoundland parents are natural-born Canadian citizens provided they were either minors on Apr. 1, 1949 or had before that date been lawfully admitted to Canada or Newfoundland for permanent residence. However, a person who was a minor on Apr. 1, 1949, ceased to be a Canadian on his 24th birthday or on July 1, 1968, whichever is the later date, unless

he has his place of domicile in Canada at such date or has before such date, and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship. A person born outside of Canada to Newfoundland parents after Mar. 31, 1949 is a natural-born Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases. A person who becomes a natural-born Canadian in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada on that date.

Canadian Citizens other than Natural-Born.—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Acquisition of Canadian Citizenship by Aliens or British Subjects.—An adult non-Canadian British subject or an alien who wishes to become a Canadian must formally file an application for citizenship. The non-Canadian British subject may file an application direct with the Registrar of Canadian Citizenship, whereas an alien must file an application through his local court, or through one of the special citizenship courts now established or, if he lives more than 50 miles from a court, he may mail his application to the Registrar of Canadian Citizenship in Ottawa, who will file it with the appropriate court. After the application has been 'posted' for three months, he shall appear before the court for examination. In either case the same requirements are generally applicable:—

- (1) He must have resided in Canada for 12 of the 18 months immediately preceding the date of his application.
- (2) He must have been lawfully admitted to Canada for permanent residence and either have acquired Canadian domicile before July 7, 1967, or have resided in Canada for five of the eight years immediately preceding the filing of his application. Persons living in Canada before obtaining "landed immigrant" status may count half of each full year before landing toward the residence qualification. The wife of a Canadian needs only to be admitted for permanent residence and reside in Canada for one year.
- (3) He must be of good character and not under an order of deportation.
- (4) He must have an adequate knowledge of either English or French or, alternatively, he is the spouse, widow or widower of a Canadian or, either he was 40 or more years of age at the time of lawful admission and has resided in Canada for more than 10 years or he was less than 40 at the time of admission and has resided continuously in Canada for more than 20 years.
- (5) He must have an adequate knowledge of the responsibilities and privileges of citizenship.
- (6) He must intend to comply with the Oath of Allegiance and to have his place of domicile permanently in Canada.

At the conclusion of a court hearing, the decision of the court is forwarded to the Minister responsible for the administration of the Canadian Citizenship Act. If the decision is favourable and a certificate of Canadian Citizenship is granted by the Minister, it is forwarded to the clerk of the court who shall inform the applicant of the date and time he is to appear before the court to take the Oath of Allegiance, renounce his previous nationality and receive his certificate. Where a court finds that an applicant does not possess the required qualifications to be granted citizenship, the Minister, upon receipt of the decision, will so advise the applicant and give him notice that he may, within 30 days of receipt of such notice, appeal the decision to the Citizenship Appeal Court. The Citizenship Appeal Court consists of one or more designated judges of the Exchequer Court of

Canada. If a court rejects an application and this decision is upheld by the Citizenship Appeal Court or if an application is refused by the Minister, the applicant has the right to file a new application two years after the date of rejection.

Status of Married Women.—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

Status of Minor Children.—Alien and British subject minor children do not automatically become Canadians with their parents. After one parent has become a Canadian, the responsible parent of that child, his mother if she has de facto custody of the child or maintains him, the tutor or the legal guardian of the child may apply for citizenship on the child's behalf. Application is made to the Registrar of Canadian Citizenship, Ottawa. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances.

Loss of Canadian Citizenship.—Canadian citizenship may be lost in the following manner:—

- (1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
- (3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.

Prior to the 1967 amendments of the Citizenship Act, a person, other than a natural-born Canadian, who since becoming a Canadian had resided outside of Canada for 10 consecutive years automatically ceased to be a Canadian; this provision for automatic loss has been removed from the Citizenship Act.

Loss of Citizenship by Revocation—Applicable Both to Non-natural-Born and to Natural-Born Canadians.—Prior to the 1967 amendments of the Citizenship Act, loss of Canadian citizenship by revocation was limited under certain provisions of the Act only to non-natural-born Canadians. This discriminatory distinction between non-natural-born and natural-born Canadians has been removed from the Citizenship Act and the following substituted: Canadian citizenship may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that *any Canadian citizen* has, when not under a disability, (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage); (2) taken or made an oath, affirmation or other declaration of allegiance to a foreign country; (3) made a declaration renouncing his Canadian citizenship; or (4) obtained Canadian citizenship by false representation or fraud or by concealment of material circumstances.

Doubt as to Loss of Citizenship.—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the commission referred to in the Citizenship Act for a ruling and the decision of the commission or the court, as the case may be, shall be final.

Section 2.—Canadian Citizenship Statistics

According to the 1961 Census, which required that each person state the country to which he owed allegiance and had citizenship rights as at June 1, 1961, less than 6 p.c. of Canada's population reported a country of citizenship other than Canada. Table 1 shows the citizenship of the population by province.

1.—Citizenship of the Population, by Province, Census 1961

Characteristics of Persons Granted Citizenship Certificates in 1967.—Since 1953 comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality. The number of applicants fluctuates from year to year but it is known that about 40 p.c. of the immigrants who entered Canada during the past ten years who are eligible for Canadian citizenship have become Canadians.

Of the 59,968 persons granted citizenship in 1967, fewer than 1 p.c. had immigrated to Canada before 1921, 2 p.c. in the period 1921-40, 6 p.c. in the period 1941-50 and 91 p.c. after 1950. Regionally, these new citizens were distributed as follows: 2 p.c. in the Atlantic Provinces, 18 p.c. in Quebec, 52 p.c. in Ontario, 15 p.c. in the Prairie Provinces and 13 p.c. in British Columbia. Almost 87 p.c. of them resided in urban centres.

About 21 p.c. of the persons naturalized in 1966 previously owed allegiance to a Commonwealth country, 15 p.c. were former citizens of Italy, 13 p.c. of Germany, 9 p.c. of the Netherlands, 5 p.c. of Greece, 4 p.c. of Yugoslavia and 3 p.c. of Hungary. Most of the persons designated as "stateless" were born in Poland, the Soviet Union, Yugoslavia, Hungary, Germany, Czechoslovakia or Romania.

Among the males in the labour force naturalized in 1967, craftsmen, production process and related workers occupations were reported by 45 p.c., 10 p.c. were in service and recreation occupations, 15 p.c. were in professional and technical occupations, labourers accounted for 7 p.c., managerial occupations for 6 p.c. and clerical workers, salesmen, farmers, and farm workers for 4 p.c. each. Of the females, 48 p.c. were homemakers and, among those employed outside the home, 28 p.c. were in the craftsmen, production process and related workers occupations group, 22 p.c. were in service and recreation occupations and 27 p.c. were in clerical occupations.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Vital statistics provide a key to the interpretation of population development—a measure of the pace at which the population is growing, the rate at which women are marrying and reproducing, and the effect this has on the age and sex distribution of the population, as well as the relative importance of the diseases that cause death each year. Vital statistics constitute the record of births, deaths, marriages and divorces registered in the provinces and territories of Canada. The continuity of such data gives a constant guide to the planning, operation and evaluation of many national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution. The population data upon which vital statistics rates are computed are given in Chapter III of this volume. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202), *Causes of Death* (Catalogue No. 84-203) and in other regular and special reports; in addition, certain unpublished data are available on request.

This Chapter includes the most recent data available at the time of going to press; certain tables therefore include 1967 data while others are up-dated to 1966 only.

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces and territories of Canada for five-year periods 1941-65 and for single years 1965-67. Table 2 shows similar data for urban centres having at least 20,000 population at the date of the 1966 Census for the year 1966 with comparative averages for 1961-65.

1.—Summary of Principal Vital Statistics, by Province, 1941-67

NOTE.—Figures from 1921, when the collection of national statistics was initiated, are given in previous editions of the Year Book. Figures for neonatal mortality (within the first four weeks of birth) are given on p. 251 and those for divorces on p. 260.

¹ Excess of births over deaths. ² Deaths under one year of age; deaths within the first four weeks of birth are given on p. 251. ³ Per 1,000 population. ⁴ Per 1,000 live births. ⁵ Per 10,000 live births.
⁶ Figures for Newfoundland are included from 1949.

2.—Summary of Principal Vital Statistics for Incorporated Urban Centres of 20,000 Population or Over,¹ 1966 with Average for 1961-65

Note.— Birth and death rates cannot be computed for the period 1961-65 since urban centre populations are not known for intercensal periods. Figures for certain urban places may not be comparable for the periods shown because of changes in area boundaries, particularly for those indicated by an asterisk (*). Urban centres are designated in this table by the following abbreviations: c.=city, t.=town, v.l.=village, s.m.=suburban municipality and d.m.=district municipality.

¹ As at the date of the 1966 Census; residents only. ² Deaths under one year of age. ³ Deaths under 28 days. ⁴ By place of occurrence. ⁵ Per 1,000 population. ⁶ Per 1,000 live births. ⁷ Population fewer than 20,000 at date of 1966 Census but included as the largest urban centre in Prince Edward Island.

Section 2.—Births*

No accurate figures on Canadian crude† birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:—

Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)
1851-61.....	45	1891-1901.....	30
1861-71.....	40	1901-11.....	31
1871-81.....	37	1911-21.....	29
1881-91.....	34		

* Unless otherwise indicated, "births" in this Section refers to infants born alive; stillbirths are dealt with under a separate heading on pp. 238-239 and under multiple births on p. 233. For international comparisons, see Section 7, pp. 264-265.

† A crude rate is one based on the *total* population.

The general trend in the national crude birth rate (i.e., per 1,000 total population) since 1925 is shown in the chart on p. 230 and since 1941 in Table 1. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930s and during World War II to 21.3 in 1945, and in the two years following the War rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but has since been declining and in 1967 reached 18.2, the lowest on record. Part of this decline is attributable to the fact that the crude birth rate is based on *total* population, which now includes larger proportions of 'non-productive' population, as well as to the fact that the large, immediate postwar cohorts of married women are now approaching the end of their reproductive periods and have completed their families. Further, even if the annual number of births were to remain stable, the net effect of an increase in population would be a declining crude birth rate. There is no direct evidence as to the influence of contraceptives in the declining birth rate in recent years.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 and those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record high crude birth rates during the 1956-60 period. However, in 1967 most of the provinces recorded their lowest rate since the early years of the War, while Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Manitoba and Saskatchewan had *record* low rates.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest rate in Canada. Since the late 1930s or early 1940s Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 224-225, shows that six provinces—Newfoundland, Alberta, New Brunswick, Prince Edward Island, Nova Scotia and Saskatchewan, in that order—had higher crude rates than Quebec or Ontario in 1966, followed by Manitoba and British Columbia, and that, in 1967, Quebec had the second lowest crude birth rate, exceeded only by British Columbia. However, since these crude rates are based on the *total* population they do not reflect the true fertility of the women of reproductive ages in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 45 (see pp. 233-235).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1967, 127,509 babies were born to Ontario mothers as compared with 101,471 to Quebec mothers. Altogether, 370,894 children were born alive in Canada in 1967, 108,381 fewer than the record 479,275 born in 1959 and 16,816 fewer than the number born during 1966.

Sex of Live Births.—With rare exceptions, wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless, it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930s. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries—although there is no generally accepted explanation for it—is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,056 since 1946. In 1967, 1,049 male infants were born for every 1,000 females—the lowest ratio since 1941.

3.—Sex Ratios of Live Births, 1941-67

NOTE.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Hospitalized Births.—In 1967, 99.4 p.c. of all Canadian births occurred in hospital as compared with 90.2 p.c. ten years previously. Before the initiation in 1958 of the federal-provincial hospital insurance programs—in which all provinces were participating by 1961—there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Little variation now exists and only in the Yukon and Northwest Territories do the percentages fall below 99.2 p.c.; in the Yukon Territory it was 95.3 p.c. in 1967 and in the Northwest Territories 84.4 p.c.

Births in Urban Centres.—Table 2, pp. 226-229, shows the number of births in 1966, as compared with the average for 1961-65, to mothers residing in each urban centre of 20,000 population or over in 1966. Because the populations of urban centres are not known for intercensal years, birth rates cannot be computed for the 1961-65 period.

Illegitimacy.*—In 1967, 8.3 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world but has been rising recently, as shown in Table 4. In some provinces the percentages of illegitimate births have more than doubled during the past 20 years.

* The term "illegitimate", as used here, does not refer to all births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

¹ Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1951.

Multiple Births.—Approximately one confinement in 99 in Canada resulted in the birth of more than one child in 1967 as compared with one in 85 several years ago; in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. One out of 100 confinements resulted in twins and one out of about 10,000 in triplets. Two sets of quadruplets were born in Canada during 1960—the first since 1957—and one set in each of 1962, 1963 and 1964; there were no quadruplets in 1965, 1966 or 1967. In 1967 a total of 371,378 mothers bore a total of 375,164 infants, of which 370,894, or almost 99 out of every 100, were born alive.

Table 5 shows that the proportion of stillbirths is higher among multiple than among single births.

Fertility Rates.—The sex and age composition of a population is obviously an important factor in determining crude birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 45, variations in the proportion of women of these ages to the total population will cause variations in the crude birth rate of different countries—or of different regions within a country—even though the actual rates of reproduction or *fertility* of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married,

that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types are compared in Table 6, and indicate the variations in each type as between provinces and the provincial trends over the years 1964-67.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 has been declining for the past few years, dropping from 114.5 in 1964 to 86.7 in 1967. However, the rates varied among the provinces from 78.1 to 161.9 during the past four years; in 1967, Newfoundland, Prince Edward Island, New Brunswick, Alberta, Saskatchewan and Nova Scotia had the highest rates and Quebec, British Columbia, Ontario and Manitoba, the lowest, in order of mention. On the other hand, the average annual number of infants born to every 1,000 *married* women in the country as a whole dropped from 164.2 to 124.4 during the same period. According to this measure, the four eastern provinces and Saskatchewan had, on the whole, the highest rates.

6.—Crude Fertility Rates, by Province, 1964-67

Province or Territory	Rates per 1,000 Total Women 15-44 Years of Age ¹				Rates per 1,000 Married Women 15-44 Years of Age ¹

Canada².....	114.5	103.4	93.4	86.7	164.2	148.4	133.9	124.4

¹ Since the number of births to women over 44 is quite small, rates are here restricted to women under 45.

² Excludes the Yukon and Northwest Territories.

The rates shown in Table 6 are *crude* in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed *age-specific fertility rates*, i.e., the number of infants born annually to every 1,000 women in *each* of the reproductive age periods, again either for all women or for those who are married. Table 7 provides these two sets of rates—the former for 1941, 1951 and 1958-67 and the latter for 1962-67 in addition to the census years from 1941 to 1961.

Another measure of fertility in a country is obtainable from what is conventionally referred to as a *gross reproduction rate*. The gross reproduction rates shown in Table 7 indicate the average number of female children born each year to each woman living

through the child-bearing ages. In other words, this figure represents the average number of females that *would* be born to each woman who lived to age 50 *if* the fertility rate of the given year remained unchanged during the whole of her child-bearing period. A gross reproduction rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930s the rate varied between 1.300 and 1.500 and since World War II has ranged from 1.640 to a record high of 1.915 in 1959; in 1967 the rate stood at 1.261, still 26 p.c. more than the number required for the population to replace itself but down one third from that of five years ago. With minor exceptions, provincial reproduction rates are also well above the replacement level.

Table 7 indicates that in 1967, considering all women whether married or not, women in their 20s were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25, 161 infants were born during that year or, expressed another way, about one woman out of six in that age group gave birth to a live-born infant. This compares with a rate of 151 for women in the age group 25-29. However, among married women, teen-age mothers have consistently had the highest fertility, with about two out of five bearing a child in 1967, while more than one out of every four married women in their early 20s had a child as compared with about one in five women in their late 20s.

Age of Parents.—Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 8.

Almost 9 p.c. of the legitimate children born in 1966 were born to mothers under 20 years of age, in two fifths of the births the mother was under 25 years, and in over two thirds, under 30 years; in over one fifth of the births the father was under 25 years of age, and in over one half of all births the father was under 30 years. On the other hand, over two fifths of the illegitimate infants were born to mothers under 20 years of age and an additional 35 p.c. to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1966 was 27.5 and of the fathers 30.8 years; ten years ago the average ages of the parents were 28.4 and 31.7, and thirty years ago 29.2 and 33.6, respectively.

The median age of unmarried mothers who bore a live-born child in 1966 was 20.8; that is, half of the mothers of the 28,559 'illegitimate' children delivered in 1966 were under 20.8 years of age.

Order of Birth.—Table 9 shows the order of birth of all live-born infants in 1966 according to the age of the mother. As would be expected, 33,860, or almost four fifths of the 42,455 infants born to mothers under 20 years of age, were the first live-born child, whereas almost 13 out of every 25 of the children born to mothers of 20-24 years were their second or later live-born child. In 1966, 212 infants were born to mothers who had not yet reached their 15th birthday.

Birthweight.—Excluding Newfoundland, information on birthweight of newborn infants has recently become available from provincial records of birth. These data, in addition to their usefulness in calculating the average weights of newborn infants, are of importance from the public health and medical points of view in throwing light on the number of immaturely developed foetuses that are delivered alive. According to criteria recommended by the World Health Organization, infants of 5½ lb. or less at birth are considered 'immature' and hence exposed to a much greater risk of dying than those over this weight. Weight at birth depends on a host of maternal factors, most of which are not

included in the birth records, but some information is available on the age of the mother and length of pregnancy before delivery.* Analysis of this information shows that (1) there are variations in average weight according to the age of the mother, (2) women under 20 and over 35 tend to produce higher proportions of immature infants, so that the late 20s and early 30s would appear to be the ideal ages for motherhood, and (3) almost all infants of less than 28 weeks gestation are delivered 'immature' according to the definition. The average single male infant born at full term weighs about 7½ lb. at birth and the average female about 4 oz. less.

Stillbirths.†—The 4,248 stillbirths of at least 28 weeks gestation that were delivered in 1967 represented a ratio of 11.5 for every 1,000 fetuses born alive. As is evident from Table 11, the stillbirth rate has been decreasing steadily—except for a slight increase in 1967—and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers but the difference is narrowing.

¹ Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50. for Newfoundland are included from 1949.

² Figures

Table 12 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth ratios for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30. The average age of mothers who bore stillborn children in 1966 was

* Obtainable from the Vital Statistics Section, DBS.

† Stillbirth figures given here refer only to fetuses of 28 or more weeks gestation which "showed no sign of life". Up to the end of 1963, only fetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy are not shown here but are obtainable from the Vital Statistics Section, DBS.

29.5 years; the median age was 28.5. The average age of mothers who bore legitimate live-born children was 27.5 and of those who bore illegitimate live-born offspring was 23.0. Causes of stillbirths in 1966 are shown in Table 13.

Section 3.—Deaths*

No official crude† death rates are available prior to 1921, but some indication of these may be obtained from studies of the early censuses as follows:—

Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Crude Death Rate (per 1,000 Population)
1851-61.....	22	1891-1901.....	16
1861-71.....	21	1901-11.....	13
1871-81.....	19	1911-21.....	13
1881-91.....	18		

* For international comparisons, see Section 7, pp. 264-265.

† A crude rate is one based on the total population.

As is typical of pioneer populations, Canada had a high death rate in the mid-1850s when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25. Although no data are available, it is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly high since even in the 1920s mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was halved during the 80 years between 1851 and 1930, dropping from about 22 to 11. It declined steadily to slightly over 8 in the late 1950s and dropped to a low of 7.4 in 1967. This is one of the lowest crude death rates in the world.

Table 1, pp. 224-225, shows the trends since 1941 in the provinces and territories. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is attributable mainly to a high proportion of people in the older age groups.

Subsection 1.—General Mortality

Age and Sex Distribution of Deaths.—During the period of national vital statistics (1921 to date), the mortality pattern at all ages has been steeply downward. Of major significance in lowering the over-all death rate were the reductions in infant mortality, in childhood death rates and in those of young adults. In 1931, over 19 p.c. of all male deaths occurred among persons of five to 44 years of age; in 1966, 10.8 p.c. took place in this age group. Among females in the same age group the proportion dropped from just under 22 p.c. in 1931 to 7.7 p.c. in 1966.

Tables 14 and 15 illustrate the very large reductions in death rates that have taken place since 1931 in each age group of the population. By far the greatest reductions have been among the young of both sexes. However, even though the rates for females at every age have always been consistently lower than those for males, female death rates have been declining faster and the differences are gradually widening. Between 1931 and 1966 the rates for all females dropped by 35.4 p.c. as compared with only 17.1 p.c. for males.

Despite the very considerable reduction that has taken place in infant mortality, more deaths still occur in the first year of life than in any other single year. Of the total deaths occurring in 1931, almost one quarter were of children under five years of age and more than three quarters of those were of children under one year of age; of the deaths occurring in 1966, about 7 p.c. were of children under five years and of those about 84 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age at death. In 1931, the average age at death of males was 43.1 years and of females 44.8

years; by 1966 this had advanced to 62.0 years and 65.9 years, respectively. On the other hand, the median age increased during the same period from 50.8 to 68.4 for males, and from 52.1 to 73.5 for females. This means that half of all the females who died during 1966 were over 73.5 years of age, while for males half had reached 68.4 years. Since 1931, the gains in median age were 17.6 years for males and 21.4 for females.

number of annual deaths occurred.² The age above and below which half of the total

Table 16 indicates the variations from province to province in average and median ages at death; these, in turn, are dependent in large measure on the age distribution of the population as well as on varying mortality rates at each age. For example, in Newfoundland a high mortality rate among infants and young children reduces the average and median age for that province, but the reverse is the case in British Columbia and several other provinces with older populations.

¹ The age above and below which half of the total number of annual deaths occurred.

Deaths in Urban Centres.—Table 2, pp. 226-229, shows the numbers of deaths in urban centres of 20,000 population or over in 1966 and the average numbers for the period 1961-65; death rates for urban centres cannot be computed for the 1961-65 period since their populations are not known for intercensal years.

Causes of Death.—Table 17 summarizes the most recent figures for deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. Over 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases, and nephritis. Because of the rise in the average age at death during the past thirty years, the proportion of deaths from causes that affect older people has increased. Cancer and diseases of the cardiovascular-renal systems now account for a larger proportion of all deaths. By the same token, deaths from causes that affect mainly children and young adults have declined.

¹ Per 100,000 males.² Per 100,000 live births.

Accidents have displaced infectious diseases in recent years as one of the major killers. Table 18 shows clearly that accidents are, by far, the leading cause of death among males from age one to 44 and one of the five major causes above that age. Although less predominant among females, accidents are also one of the leading causes of female death beyond the first year of life.

Subsection 2.—Infant Mortality

Table 1, pp. 224-225, and Table 19 show the striking improvement that has taken place in the rate of infant mortality during the past 25 years. Although 63,353 of the 2,565,574 children born in the six years 1962-67 died before reaching their first birthday, 177,554 others lived who *would have died* at the infant mortality rate prevailing in the period 1926-30. This improvement is attributable to many factors—the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally. Among the provinces, the 1967 male infant mortality rates ranged from a low of 21.0 to a high of 33.0, compared with the national average of 24.2—the latter including the very high rate among the Northwest Territories aboriginal population. Female rates ranged from 17.3 to 24.1, compared with the national rate of 19.6. Although the national and provincial rates for both sexes have been declining steadily for some years, for some unknown reason there were recently a number of reversals in provincial rates.

Table 19 shows that mortality among male infants is 25 p.c. to 30 p.c. higher than that among female infants for Canada, with wider variations for the individual provinces. For the country as a whole, out of every 1,000 infant boys born alive in 1967, 24 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 20 died within one year. As already pointed out, there are on the average 1,056 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1962-67 there were 1,316,279 male children born compared with 1,249,295 female children, an excess of 66,984 or 5.4 p.c.:

in the same period, 36,290 male children died during their first year compared with 27,063 female children so that the excess of males at one year of age was reduced to 57,757 or 4.7 p.c.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 226-229, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated, while others have consistently higher rates.

Causes of Infant Deaths.—In 1966 almost 70 p.c. of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 1,642 deaths and an added complication in 2,290 others. Congenital malformations accounted for 1,725 fatalities, pneumonia for 950, postnatal asphyxia and atelectasis for 966 and injury at birth for 893. Rates for all of these causes (except congenital malformations) decreased in 1966.

Neonatal Mortality.—Deaths occurring within the first four weeks of birth are conventionally referred to as 'neonatal' deaths. Table 21 shows that about 70 p.c. of all infant deaths occur in this hazardous neonatal period and, as would be expected, are caused mainly by conditions associated with pregnancy or delivery. Table 22 gives numbers and rates of neonatal deaths for 1941-67 and the chart on p. 249 compares the major causes of such deaths in 1966 with all infant deaths from the same causes. Although neonatal death rates have been declining steadily since 1941, there has been relatively little reduction during the past five to 10 years and in fact slight increases in some provinces during the past two or three years.

¹ Prior to 1951, includes deaths under one calendar month of age; since 1951, includes deaths under 28 days.

Perinatal Mortality.—'Perinatal' mortality—the combined total of stillbirths and deaths of live-born infants occurring 'around' the natal period—is a relatively new vital statistics concept. Since such deaths frequently have the same underlying causes, associated with pregnancy or delivery, regardless of whether they occur before or after delivery, perinatal deaths are generally considered as including the combined total of stillbirths occurring after at least 28 weeks pregnancy and deaths of live-born infants who fail to survive the first week of life.

In 1966 there were 10,004 such 'deaths', of which 4,429 were stillborn and 5,575 live-born but failed to survive one week, with a national rate of 25.5 such deaths for every 1,000 total deliveries. This perinatal rate has declined slowly but steadily from 65.2 in 1921 to 25.5 in 1966.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 224-225, the number of mothers who die as the result of pregnancy or childbirth has been greatly reduced during the past two decades, reaching an all-time low of 88 in 1967 as compared with 135 in 1966 and 1965. Since 1951 the rate of maternal mortality per 10,000 births has been under 10 and since 1959 it has been under five. With this recent improvement, Canada's maternal death rate (2.4 in 1967) is com-

paring more favourably with those of other countries (see p. 265). Mortality among unmarried mothers is higher than among married mothers.

Causes of Maternal Deaths.—Table 23 shows the main causes of maternal deaths during the years 1964-66.

23.—Maternal Mortality and Rates per 100,000 Live Births, by Cause, 1964-66

687-689	Other.....	12	7	7	3	2	2
	Totals, All Puerperal Causes.....	137	135	135	30	32	35

Of the 135 maternal deaths in the latest year, 48 resulted from complications arising during pregnancy, about two thirds of these from some type of toxæmia; 37 resulted from a complication of delivery, 37 from a post-delivery complication and 13 from abortive delivery.

Age at Death.—Table 24 shows the distribution of maternal deaths by age group; the average age at death is about four or five years higher than the average age of all mothers at the time of childbirth. Although death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. The rate for mothers in the age group 30-34 is twice to three times as high as the rate for the 20-24 group, and increases with the age of the mother.

Section 4.—Natural Increase*

The excess of births over deaths, commonly referred to as 'natural increase', is a very important factor in the growth of a population. Although the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:—

Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)
1851-61.....	23	1891-1901.....	14
1861-71.....	19	1901-11.....	18
1871-81.....	18	1911-21.....	16
1881-91.....	16		

Because of the combination of high birth rates and declining death rates—despite the fact that death rates were still relatively high—the annual rate of natural increase during the late 1800s and early 1900s varied between 11 and 23; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920s and early 1930s the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there has been a steady drop because of declining birth rates, the natural increase rate in 1967 was still high at 10.8.

Table 1, pp. 224-225, gives average rates of natural increase in the provinces for five-year periods 1941-67 and Table 25 gives the provincial figures for males and females separately for 1941, 1951, 1961 and 1965-67. High birth rates and declining death rates have given Newfoundland, Alberta and New Brunswick the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

* For international comparisons, see Section 7, pp. 264-265.

¹ Excludes Newfoundland and the Yukon and Northwest Territories.

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; natural increase for centres of over 20,000 population can be compiled from the birth and death figures given in Table 2, pp. 226-229.

Section 5.—Marriages and Divorces

Subsection 1.—Marriages*

In 1967 record numbers of marriages were solemnized in Canada (165,879) and in virtually every province mainly because of the postwar babies now reaching 'marriageable' age. The crude marriage rate was 8.1 per 1,000 population and provincial rates varied from 7.4 per 1,000 population for Prince Edward Island to 8.8 for New Brunswick.

Table 26 gives the number of marriages and the marriage rates for Canada and the provinces for 1941, 1951, 1961 and 1965-67, together with percentages of brides and bridegrooms according to place of birth. For the country as a whole, 83 p.c. of the bridegrooms of 1967 were born in Canada and 68 p.c. in the province in which they were married; 86 p.c. of the brides were born in Canada and 74 p.c. in the province in which they were married. During the postwar years until 1959 an increasing number of marriages were of persons born outside the country, because of the heavy immigration of young persons. However, since 1959 the proportion of foreign-born bridegrooms declined from 19.6 to 17.2 p.c. in 1967 and the proportion of foreign-born brides from 15.9 to 14.2 p.c. There are wide

* For international comparisons, see Section 7, pp. 264-265.

variations in the pattern of intermarriage of foreign-born and native-born persons as between provinces; in the older Atlantic Provinces and in Quebec and Saskatchewan, there is a greater tendency than in the other provinces to marry native Canadians and in these areas both partners are often born in the same province.

Age and Marital Status of Brides and Bridegrooms.—Table 27 shows that 91.3 p.c. of the brides and 91.4 p.c. of the grooms in 1966 had never previously married, and that 4.4 p.c. of the brides and 3.9 p.c. of the bridegrooms had been widowed. The median age at marriage of bachelors was 23.7 years and that of spinsters 21.2. The median ages of widowers and widows at time of remarriage were 58.4 and 51.7.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 28 shows the relatively strong influence that religion has on marriage. About 67 p.c. of all marriages are between persons of the same religious denomination; in 1966 among those of Jewish faith it was about 91 p.c.; among Roman Catholics about 85 p.c.; United Church about 55 p.c.; and Eastern Orthodox about 66 p.c. Except for those of the Jewish faith, the proportions of persons of the same faith marrying appears to be declining slightly in recent years.

¹ Includes Greek Catholic denomination.

² Percentage of marriages between contracting parties of the same religious denomination.

Subsection 2.—Divorces

Before World War I the number of divorces granted in Canada represented less than one per 1,000 of the yearly number of marriages. After that War, however, there was a definite upward trend; the number advanced to 8,213 in 1947, declined gradually to a post-war low of 5,270 in 1951 and since then has again moved sharply upward; the 1967 preliminary figure of 11,156 was the highest on record.

29.—Dissolutions of Marriage (Divorces), by Province, 1941-67

NOTE.—Figures for individual years from 1900 to 1953 are given in the 1956 Year Book, p. 230, for 1954-61 in the 1965 edition, pp. 263-264, and for 1962-64 in the 1967 edition, p. 271.

Section 6.—Canadian Life Tables

Five official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951, 1956 and 1961. The life table values for 1961 are given in abbreviated form in Table 30.

Life tables give some measure of the health and general conditions of survival of an 'artificial' population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1961, of 100,000 males born, 3,058 would have died in their first year, according to the mortality rates in effect during the period 1960-62, so that 96,942 would survive to one year of age; 179 would have died in their second year so that 96,763 survived to two years of age, and so on. At 100 years of age only 105 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the number of years which a person on the average might expect to live if the mortality rates in the given years remained constant throughout his lifetime.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late teens to early 30s and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. As an illustration of the information available from study of the life tables, it may be observed that at the mortality rates given in the 1961 life table (see Table 30) about 12,100 males would have died before reaching age 50 as compared with about 7,600 females; only 57,517 of the original group of 100,000 males would have survived to age 70 as compared with 72,746 females.

By 1961, life expectancy *at birth* in Canada had reached a new high point of 68.4 years for males and about 74.2 for females—comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child *at present mortality risks* may, on the average, expect to live an additional 69.5 years and a female almost 75 years, representing for an infant boy a gain of 1.2 years over his expectation at birth and for an infant girl a gain of 0.8 years. The expectation of life of a 15-year-old boy is 56.2 additional years; of a 15-year-old girl 61.5 years. At 25 years of age the expectation is about 46.9 years for men and 51.8 years for women and at age 70, 10.7 years for men and 12.6 years for women.

Table 31 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951, 1956 and 1961. According to these figures, life expectancy at birth for men increased about three quarters of a year between 1956 and 1961 and 1.3 years between 1951 and 1956, compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained one and one quarter years between 1956 and 1961 and 2.1 years between 1951 and 1956, compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1961 a total of 8.4 years was added to male life expectancy and 12.1 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, from 1931 to 1961, 3.5 years were added to the life expectancy of a five-year-old male, 2.5 years to a 20-year-old, about one year to a 40-year-old and about half a year to a 60-year-old as compared with 8.4 years for a newborn male. During this period, life expectancy for a five-year-old female gained 8.1 years, for a 20-year-old 6.9 years, for a 40-year-old 4.4 years and for a 60-year-old two and three quarter years as compared with 12.1 years for a newborn female.

Longevity improved for both sexes, though more so and at all ages for females, but there was only slight improvement for males beyond middle life. Briefly, the rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates were established from about 50 years onward for males and from about 80 years onward for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, for example, was subjected to the mortality rates in effect in 1960-62, and the life expectancy computed as if those death rates at each age were to prevail during their lifetime. Actually the theoretical 200,000 infants born in 1960-62 will most probably have a pattern of survival and life expectancy quite different from that of the present life tables as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1960-62.

The improvement in life expectancy, particularly among children and adolescents, was caused mainly by the substantial reduction in recent years in mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past 30 years. As approximately 9 p.c. of deaths in 1960-62 occurred among infants and another 77 p.c. among persons over age 50, any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

Table 32 shows provincial or regional life expectancy for males and females at selected ages. According to the 1961 figures, male life expectancy at birth continues to be below 70 and that for females above 72 in all of the five regions. During the period 1931-61, life expectancy at birth for males increased from 60.00 to 68.35, or 8.35 years, varying from 6.32 years for the Prairie Provinces to 11.09 years for Quebec; life expectancy at birth for females rose from 62.10 to 74.17, or 12.07 years, varying from 10.08 years for British Columbia to 14.97 years for Quebec. Quebec showed the greatest improvement of any region among young males and females and middle-aged females, and British Columbia recorded the greatest improvement among middle-aged males.

Section 7.—International Comparisons of Vital Statistics

Table 33 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by three countries—Japan, Venezuela and Union of Soviet Socialist Republics—and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking thirteenth among those listed. However, 11 countries reported lower rates of infant mortality, notably Sweden, Finland and the Netherlands—12.6, 14.4 and 14.7, respectively, as compared with Canada's rate of 23.1.

33.—Principal Vital Statistics Rates of Selected Countries, 1966

NOTE.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

*The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. viii of this volume.*

In recent years many problems in the planning of health and welfare services have become intensified and emphasis has shifted toward new approaches and new programs. General prosperity, growing urbanization and industrialization, larger numbers of children and older persons in the population, and new concepts and knowledge in health and welfare matters have all contributed to needs for additional and revised services. A number of important developments took place in 1968.

* Except where otherwise indicated, this Chapter was prepared (November 1968) by the Research and Statistics Directorate of the Department of National Health and Welfare, Ottawa.

Of significance was the calling of the first International Conference of Ministers Responsible for Social Welfare, held in New York in September under United Nations auspices. Canada's Minister of National Health and Welfare joined representatives of 93 other nations to ensure, in his words, "that the human and material resources of a country are effectively mobilized and developed to deal successfully with the social requirements of change". Included in the Canadian delegation to the Conference were the Minister of Health and Welfare for New Brunswick, the Minister of Welfare for Manitoba, the Minister of Welfare for Saskatchewan and the Deputy Minister of Family and Social Welfare for Quebec. Of the four Commissions active during the Conference, the one dealing with "Social Welfare Within the Context of National Development" was chaired by Canada's Deputy Minister of National Welfare.

Another important task undertaken by the Deputy Minister of National Welfare in the course of 1968 was the preparation of a Review of Social Development Programs as the basis of a government assessment of federal measures in this field. Existing programs and alternative options were examined as a part of this internal assessment.

A number of developments in Canada's social security system proved helpful from the viewpoint both of meeting the needs of individual Canadians and of relieving the provinces of costs they have been, or would otherwise be, carrying. One of these developments was the further reduction in the age of eligibility for the Old Age Security pension and the Guaranteed Income Supplement. As of Jan. 1, 1969, the age for qualification was 66 instead of 67. As a consequence, persons over 66 no longer require basic assistance under the shared-cost programs of Old Age Assistance, Blind Persons Allowances and Disabled Persons Allowances, and this meant a further significant saving to the provinces. When the process of reducing the eligibility age was begun in 1966, it was estimated that by the time the process was completed (Jan. 1, 1970) the savings to the provinces over the four-year period would amount to some \$120,000,000.

As for the impact of the Guaranteed Income Supplement program, an indication of what it has meant in terms of reducing the demand for provincial supplementary assistance can be gained from the fact that, as of the end of 1968, 750,000 Old Age Security beneficiaries (i.e., more than one half of the total caseload) were receiving the Supplement, and of this number more than 450,000 were being paid the full amount available. In this connection, the further cost-of-living escalation of benefits, effective Jan. 1, 1969, brought the Old Age Security pension up to \$78.00 a month and the combined maximum of the Old Age Security pension and the Guaranteed Income Supplement payment to \$109.20 a month.

It may also be noted that the Canada and Quebec Pension Plans have begun to make a significant contribution in the field of income maintenance. Benefits for survivors were paid for the first time in February 1968, and by year-end some 11,000 widows and orphans were receiving such benefits under the Canada Pension Plan alone. Many of these recipients would otherwise have had to depend for their basic maintenance on mothers' allowances or general assistance. Similarly, the retirement benefits, now payable at age 66, are increasingly significant. By the end of 1968, more than 37,000 persons were receiving such benefits which, as of January 1969, reached a maximum of \$32.00 a month; the maximum payment for persons retiring at the end of 1969 will be \$12.00 a month.

During 1968, the Canada Assistance Plan completed its second year of operation and there was increasing evidence of its effectiveness not only in bringing together and improving existing public assistance programs but also in integrating child welfare services, providing support for health services to persons in need, extending a wide range of administrative and welfare services, and making provision for Indian welfare and for work activity projects. With coverage under the Plan currently running at approximately 1,000,000 recipients, federal payments for 1969-70 are estimated at close to \$500,000,000.

In August 1968, a Task Force on Sport was appointed by the Minister of National Health and Welfare to study relationships between professional and amateur sport and

between the Federal Government and the national and international sport-governing bodies. It is also to suggest ways in which the Federal Government can improve Canadian athletic competition at home and abroad.

Concerning health, the outstanding event of 1968 was the coming into force of the national Medical Care Act. Effective July 1, agreements came into effect between the Federal Government and the governments of Saskatchewan and British Columbia (see pp. 284-286). Several other provinces were reported planning to sign in 1969.

Because of the considerable growth in health care costs, a Federal-Provincial Committee was set up at a meeting of Ministers of Health of the Federal and Provincial Governments held in November in Ottawa. This Committee is to advise the Ministers concerning ways and means of keeping the cost of health services at a reasonable level. At the same Conference, the Federal Government announced its intention of phasing out certain parts of the General Health Grants Program over a three-year period. It also indicated its plans to cease financial participation in the Hospital Construction Grant in 1970, and to limit expenditure on the Health Resources Fund in 1968-69 to \$37,540,000.

Much attention has been given to the augmentation of Canada's limited physical facilities and manpower resources for the provision of health care. Within the Federal Government, the Health Resources Directorate of the Health and Welfare Department is planning studies to measure needs and enhance the efficiency with which present resources are employed. The provinces have also been conducting studies and have been building health science centres. These centres, integrated complexes for the complete provision of all facets of health care, education and research, are under construction or active planning in major cities across Canada; the Health Resources Fund has made major contributions to them (see p. 270). In October, representatives of the centres and other interested professionals met in Ottawa, under the auspices of the Department of National Health and Welfare, to discuss common problems and exchange ideas.

Other events and circumstances of 1968 with special bearing upon health and social security included:—

The growing problem of the abuse of drugs (narcotics, marijuana, LSD, STP, and modeling glue): The apparent failure of the established mechanisms of law enforcement to significantly curb, or even to slow down, the increase in the misuse of these substances, was leading to heightened concern and to increased demands for re-examination of the approaches made in the past. Two Bills were introduced in the Senate in 1968 to facilitate the control of hazardous substances and restricted drugs and at the year-end were under consideration. Concurrently, the Department set up a Committee to examine the problem of drug abuse and to make recommendations to guide future policy.

Steadily increasing documentation of the harmful effects of smoking upon health: Late in the year, the Department of National Health and Welfare published a listing, by brand-name, of the nicotine and "tar" content of all cigarettes commonly sold in Canada. Four Bills introduced in the House of Commons late in 1968 by private members were referred to Committee and not simply "talked out", as is often the fate of such Bills. Moreover, their consideration by the Committee had the support of the Minister. One of the Bills would prohibit the broadcasting of cigarette commercials, another would extend the Food and Drugs Act to tobacco products, and the others would require warnings of hazards to health to appear on tobacco packages and in printed tobacco advertising.

Water pollution studies: The boards set up in 1965 by the International Joint Commission of Canada and the United States to reduce the pollution of Lake Erie, Lake Ontario and the international section of the St. Lawrence River submitted their second interim report to the governments in August 1968. This report outlined achievements to date, which were considerable, and set out the scope of remaining problems, namely: objection-

able and harmful substances in the water; eutrophication*; thermal pollution; disposal of radioactive wastes; and pesticide runoff from broad tracts of land.

The Department of National Health and Welfare submitted a brief to the Special Senate Committee on Science Policy in November 1968. The brief recommended that the Department's scientific activities be adequately supported, that training and research into scientific administration be stressed, that survey standards be updated and applied, that an explicit science policy be adopted, that a scientific evaluation of educational systems in Canada be undertaken, that a research-information clearing-house be established, that there be a continuing parliamentary committee on science policy, that a continuing Canada Health Survey be established, that social and behavioural science be represented on the Science Council of Canada, that the Federal Government's social research be co-ordinated, that a clearing-house be set up on Canada's international research activities, and that fundamental research be adequately supported.

PART I.—HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

Section 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Canada Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare is concerned with food and drugs, including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the medical eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances and also administers disability and rehabilitation benefits under the Canada Pension Plan. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Health counselling and medical supervision are provided for the Federal Public Service. The Department also administers the civil aviation medical program for the Department of Transport.

The Department serves the provinces in an advisory and co-ordinating capacity and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Health Resources Fund and the Hospital Insurance and National Health Grant programs is a major activity. Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of health.

* The enrichment of waters by nutrients, generally causing heavy growth of aquatic vegetation such as algae, which, by decaying, progressively exhaust dissolved oxygen in lower depths. The effect is cumulative; the results are marked and often surprising; and the dynamics are not fully understood.

Subsection 1.—Public Medical Care

The Medical Care Act was passed by the Canadian Parliament in December 1966 and became operative on July 1, 1968. On that date British Columbia and Saskatchewan entered the plan and several other provinces had signified firm intention to enter by Apr. 1, 1969. In accordance with the terms of the Act, the Federal Government contributes to any participating province half of the per capita cost of all insured services furnished under the plans of all participating provinces multiplied by the number of insured persons in that one province. In order to benefit from this federal contribution, a provincial plan must meet the following criteria:—

- (1) the plan must be operated on a non-profit basis by a public authority set up by the provincial government, and subject in respect of its accounts and financial transactions to provincial audit;
- (2) the plan must make available, on uniform terms and conditions to all insurable residents of the province, insured services, which are defined as all medically necessary services rendered by medical practitioners, for whom the provincial law must provide reasonable compensation so as to ensure reasonable access to insured services by insured persons;
- (3) the plan must give entitlement to not less than 90 p.c. of the total number of eligible residents of the province during the first two years and not less than 95 p.c. thereafter;
- (4) for persons normally resident in Canada, the plan does not impose any minimum period of residence, although a waiting period of up to three months for entitlement within a province is permissible if 'portability' is provided for, so that persons retain coverage when temporarily absent from the province or during any waiting period, of not more than three months, for benefits in another province on change of residence.

In addition to the comprehensive physicians' services which must be provided as insured services by participating provinces, the Medical Care Act empowers the government to include any additional health services under terms and conditions that may be specified by the Governor in Council. All insured services must be provided without exclusion because of age, ability to pay or other circumstances.

The Canada Assistance Plan (see pp. 310-311) provides for federal contributions of half of the costs of health care services (as well as income maintenance) that provinces make available to persons establishing eligibility on the basis of financial need.

Subsection 2.—Health Resources Program

The Health Resources Program is concerned with manpower in the health fields necessary for the provision of comprehensive health services to Canadians. Under the program the Federal Government provides capital grants for teaching and research establishments, undertakes studies on health manpower, and offers advice and consultation.

The capital-grant aspect of the program was inaugurated when in July 1966 Parliament passed the Health Resources Fund Act, which was established to develop resources for the training of personnel in order to reduce shortages and to meet the increase in demand that is likely to follow the introduction of medical-care insurance. The Act established a fund of \$500,000,000, available over the period 1966-80. Out of this fund the Government will pay up to 50 p.c. of the cost of planning, construction, purchase, renovation and basic equipment of teaching hospitals, medical schools, training facilities for nurses and other health professionals, and research establishments; the costs of land, interest and residential buildings are excluded. Of the \$500,000,000, \$300,000,000 is available to the provinces in proportion to their populations and \$25,000,000 available to the Atlantic Provinces for joint projects in which all four provinces participate; the remaining \$175,000,000 are yet to be allocated. By Mar. 31, 1968, the Government had approved contributions of \$81,000,000 and paid out \$37,000,000—about two thirds for training facilities and one third for research establishments.

In 1967, the Government called a Medical Manpower Conference, which approved a program of studies of various aspects of the supply, distribution, training and use of professional and technical people in the health services. These health-manpower studies are intended to be undertaken by a team of consultants in the Department.

The Department provides technical and professional advice and consults with officials of provincial governments and other agencies concerned with the development of health resources in Canada, and supports programs to increase the effectiveness of health manpower. These activities are undertaken to ensure the economical and efficient use of the Health Resources Fund.

Subsection 3.—National Health Grant Program

The National Health Grant Program was instituted in 1948 to assist the provinces in extending and improving public health and hospital services. As provincial needs have altered, changes have been made in the amounts and conditions of individual grants. Table 1 shows the utilization of the National Health Grants and changes in their classification since inception, and the current grants, as follows: Professional Training, Hospital Construction, Mental Health, Tuberculosis Control, Public Health Research, General Public Health, Cancer Control, Medical Rehabilitation and Crippled Children, and Child and Maternal Health. During the period 1948-67, the total expenditures under this program were \$717,220,740, representing 81 p.c. of the funds allocated. In 1967-68 utilization reached 92 p.c.

The largest single grant has been in support of hospital construction. Up to Mar. 31, 1967, funds had been approved for the construction of buildings for 126,356 hospital beds and 15,840 bassinets, 24,023 beds for nurses and 916 beds for interns. The second largest grant, the General Public Health Grant, has assisted the provinces in extending local health services to prevent disease and control environmental health hazards. Since 1948 more than 50,000 health personnel have received bursaries for special training and in 1967-68 alone more than 6,000 health workers were employed with the aid of grant funds. Other grants are designated for preventive and treatment services in specific areas, such as mental health, tuberculosis and cancer, improvement of maternity, infant and child care, and the correction and treatment of crippling conditions.

1.—Amounts Allocated and Amounts and Percentages Expended under the National Health Grant Program, by Grant, for the Period Ended Mar. 31, 1967, and for the Year Ended Mar. 31, 1968.

Grant	May 14, 1948—Mar. 31, 1967			Year Ended Mar. 31, 1968

¹ As set out in the Orders in Council authorizing the General Health Grants and Hospital Construction Grants for the years cited. ² Provinces may vary the amounts allocated for individual General Health Grants by transfer of unexpended funds from one Grant to another. ³ Total expenditures for each Grant for all provinces including Quebec's share, which has been paid through tax rebate under the Established Programs (Interim Arrangements) Act, effective 1965-66.

⁴ Merged with the Medical Rehabilitation Grant, Apr. 1, 1960. ⁵ The amounts allocated exclude revotes for unclaimed allocations as from Apr. 1, 1953. ⁶ Absorbed into the General Public Health Grant, Apr. 1, 1960.

⁷ Lapsed in 1953 following the completion of provincial health surveys. ⁸ Introduced in 1953 and absorbed into the General Public Health Grant, Apr. 1, 1960. ⁹ Introduced in 1953 and merged with the Crippled Children Grant, Apr. 1, 1960.

¹⁰ From 1960 only; see footnotes ⁴ and ⁹. ¹¹ Introduced in 1953.

Projects supported by the Public Health Research Grant relate to the prevention of disease, disability or death; epidemiology; hospital administration; community-based health and medical care; operational research; environmental health including sanitation; and the training and utilization of health manpower.

Subsection 4.—Hospital Insurance

Provincial hospital insurance programs, operating in all provinces and territories since 1961, cover 99 p.c. of the population of Canada. The programs were introduced under the Hospital Insurance and Diagnostic Services Act of 1957, by which the Federal Government shares with the provinces the cost of providing specified hospital services to insured patients. Specifically excluded are tuberculosis hospitals and sanatoria, hospitals or institutions for the mentally ill, and institutions providing custodial care, such as nursing homes and homes for the aged. The methods of administering and financing the program in each province and the provision of services above the stipulated minimum required by the Act are left to the choice of the province.

Insured in-patient services must include accommodation, meals, necessary nursing service, diagnostic procedures, pharmaceuticals, the use of operating rooms, case rooms, anaesthetic facilities, and the use of radiotherapy and physiotherapy if available. Similar out-patient services may be included in provincial plans and authorized for contribution under the Act. All provinces include some out-patient services. The provincial plans are administered by the provincial department of health in some provinces and by a separate commission in others. To finance the insurance plans, the provinces use general revenue, sales taxes and premiums in various combinations.* The Federal Government contributes, out of the consolidated revenue fund in respect to each province, 25 p.c. of the per capita cost of in-patient services in Canada and 25 p.c. of the per capita cost of in-patient services in the province, which is then multiplied by the average number of insured people in that province. Thus, the total contribution is about 50 p.c. of the sharable cost for all Canada, but the proportion is higher for provinces where the per capita cost is below average and lower for the other provinces. Contributions for insured out-patient services with respect to each province are paid in the same proportion as the contributions to the cost for in-patients.

During 1966, the Federal Government made the following payments, totalling \$441,119,464: Newfoundland \$14,337,110, Prince Edward Island \$3,027,591, Nova Scotia \$22,656,675, New Brunswick \$18,313,419, Ontario \$219,511,420, Manitoba \$29,028,853, Saskatchewan \$30,584,659, Alberta \$47,572,631, British Columbia \$54,839,222, Yukon Territory \$383,127, and Northwest Territories \$864,727.†

Tables 2 and 3 show data for the hospitals listed in hospital insurance agreements for the year 1966. The 1,293 hospitals had a total of 137,272 beds set up at the end of the year or 6.8 beds per 1,000 population. The rate of patient-days per 1,000 population was 2,004 for Canada and ranged from 1,496 in Newfoundland to 2,320 in Saskatchewan.

Table 4 shows the expenditures of budget review hospitals. They exclude capital costs, but include expenditures for services not covered by hospital insurance plans. The expenditures increased by 15 p.c. over the preceding year to \$1,276,090,000 of which salaries accounted for two thirds. Although budget review hospitals provided only about 88 p.c. of all services, the table shows also the per capita amount of their expenditures. This varies greatly between provinces, mainly because of differences in hospital utilization (patient-days per person per year) and of the amount of care provided for chronic patients.

* Newfoundland, Prince Edward Island, New Brunswick, Quebec and Yukon Territory use general revenue only; Alberta, British Columbia and the Northwest Territories use general revenue and a daily charge at the time of service; Nova Scotia uses general revenue and sales tax; Saskatchewan uses general revenue, premiums and sales tax; and Ontario and Manitoba use general revenue and premiums.

† On Jan. 1, 1965, contributions to Quebec under the Hospital Insurance and Diagnostic Services Act were discontinued and replaced by arrangements under the Established Programs (Interim Arrangements) Act.

2.—Number of Beds in Hospitals Listed in Hospital Insurance Agreements, with Rates per 1,000 Population, by Province, as at Dec. 31, 1966

Subsection 5.—Food and Drug Control

The provisions of the Food and Drugs Act, administered by the Food and Drug Directorate of the Department of National Health and Welfare, apply to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. Wide powers are authorized under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling

and advertising. The Act also specifically prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases and also lists drugs that may be sold only on prescription.

Standards of safety and purity are developed through laboratory research and maintained through constant and widespread inspection. The inspection of food-manufacturing establishments plays a major role in the production of clean, wholesome foods containing ingredients that meet recognized standards. Changing food technology requires the development of methods of laboratory analysis to ensure the safety of new types of ingredients and packaging materials. The Food and Drug Regulations list chemical additives that may be used in foods, the amounts that may be added to each food and the underlying reason. Information on new additives must be submitted for careful review before they are included in the permitted list. Considerable emphasis is placed upon studies to ensure that the levels of pesticide residues in foods do not constitute a health hazard and the effect of new packaging and processing techniques on the bacteria associated with food spoilage is of special concern.

Detailed information on all new drugs must be reviewed by the Directorate to determine compliance with requirements before release for sale is permitted. Drug regulations set standards for drug manufacturing, facilities and controls, and prescribe additional safeguards in the distribution of investigational and new drugs. Drug manufacturing requirements relate to sanitation of facilities, employment of qualified personnel, testing to ensure standards of quality and safety at stated stages of processing, and maintenance of records of testing performance, together with a system of control to enable a complete and rapid recall of any lot or batch of drugs from the market. The controls over clinical trials and marketing of new drugs require detailed information to be submitted to the Directorate concerning the method of manufacture, the tests applied to establish standards of safety and quality, and substantial evidence of the clinical effectiveness of the new drug for the purposes stated. Samples of the final product must also be submitted. Before carrying out clinical trials, a manufacturer also must file complete data on his experience with the drug, including any evidence of adverse side effects, and the qualifications of the persons to be engaged in its investigational use. The Minister may suspend clinical testing based on this evidence if he feels that it is in the public interest to do so; in such case the manufacturer has the right to appeal the decision.

The Food and Drug Directorate administers the Proprietary or Patent Medicine Act, which is concerned with the voluntary registration before marketing and the annual licensing of secret-formula medicines sold under proprietary or trade names.

The Directorate conducts an adverse-drug-reaction reporting program across Canada to recognize and investigate reactions to drugs. The co-operation of the medical, dental, veterinary and pharmaceutical professions is solicited in advising the Directorate of such reactions in private practice. Each manufacturer and distributor of drugs in Canada is required to submit to the Directorate certain information on all the products he is marketing in Canada, other than those registered under the Proprietary or Patent Medicine Act. He must notify the Directorate each time he intends to market another product, make changes in an existing product or withdraw a product from the market. Regulation of the supply and use of narcotic drugs is carried out under the Narcotic Control Act, as revised in 1961. This legislation, administered by the Directorate's Division of Narcotic Control, is designed to ensure that narcotics, while readily available for their proper medical use, are not diverted from that use. The Royal Canadian Mounted Police and other law-enforcement agencies enforce the Act and seek to reduce the illicit traffic.

Subsection 6.—Medical Services

Through its Medical Services Branch, the Department of National Health and Welfare provides several direct and indirect types of medical service, as described in the following paragraphs. "Indirect" services are provided by hiring local services where practicable.

Indians and Eskimos.—Medical and public health services are made available to registered Indians or Eskimos who are not included under provincial arrangements and who are unable to provide for themselves. Much of the service in treatment and health education is rendered to the patients through 34 departmental out-patient clinics and 85 health centres staffed by medical and other public health personnel. In remote areas, the key facility is frequently the departmental nursing station, a combined emergency treatment and public health unit usually having two to four beds under the direction of one or two nurses; 47 of these are operated throughout Canada.

Where practicable, there has been considerable integration of Indians in provincial and municipal health agencies, so that the number of hospitals and other facilities provided specifically for them have been reduced accordingly. At present, the Department maintains 14 hospitals at strategic points and co-operates elsewhere with community, mission or company hospitals. Indians are included under all provincial prepaid insurance plans for hospital care and other forms of medical care. Indian and Eskimo health workers are trained to give instruction in health care and sanitation.

Northern Health.—Because of the special problems in developing health services in the Far North, the Department has been given the responsibility of co-ordinating federal and territorial health care for all residents. In so doing, it undertakes the functions of a health department for the Council of the Northwest Territories and assists the government of the Yukon Territory in the provision of certain health services. Hospital insurance plans are in effect in both territories.

In the Yukon, services for the total population, administered through the Commissioner for the Yukon and provided on a cost-sharing basis with the Department of National Health and Welfare, include complete treatment for tuberculosis, payment for services rendered at the Alberta cancer clinics, mental hospital care through arrangements with the Province of British Columbia, and medical care for indigent patients. Public health nursing services, measures for the control of communicable diseases, and administration of the principal public hospital are primarily the responsibility of the Department.

Similar services are provided in the Northwest Territories with costs shared between the territorial government and the Departments of National Health and Welfare and of Indian Affairs and Northern Development.

Other Medical Services.—Compulsorily prepaid medical, surgical, hospital and other treatment services are provided for crew members of all foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade, and medical, surgical and other treatment prepaid on an elective basis is available to crew members of Canadian fishing vessels. (Canadian seamen obtain their hospital care under the provincial hospital insurance plans.) A medical service is also provided for the Canadian Coast Guard.

All vessels, aircraft and other conveyances and their crews and passengers arriving in Canada from foreign countries are inspected by quarantine officers to detect and correct conditions that could lead to the entry into Canada of such diseases as smallpox, cholera, plague, yellow fever, typhus and relapsing fever. Fully organized quarantine stations are located at all major seaports and airports.

The Immigration Medical Service conducts in Canada and other countries the medical examination of all applicants for immigration to Canada and provides treatment for certain classes of persons after arrival in Canada, including immigrants who become ill en route to their destination or while seeking employment.

Health counselling is offered through Medical Services Branch units to federal employees throughout the country. This service is primarily diagnostic and advisory only but emergency treatment may also be given.

Air pilots and other air personnel are routinely examined by the Civil Aviation Medical Assessment Service for physical and mental fitness for the performance of their duties.

The Department is responsible for enforcing hygienic standards on federal property, including ports and terminals, on interprovincial means of transport and on ships and aircraft.

Subsection 7.—Radiation Protection

The Department of National Health and Welfare, as the principal adviser to the Atomic Energy Control Board under the Atomic Energy Control Regulations, reviews all applications for licences to procure radioactive materials and recommends health and safety measures. The Department has developed codes for the safe handling of all radioactive materials and has also developed a comprehensive program to protect the public from harmful radiation that could arise through the uncontrolled use of radioactive materials, X-ray equipment, nuclear reactors and other sources, as well as to meet the general concern about radiation from the testing of nuclear weapons and from medical X-ray procedures. Members of the Department serve on advisory committees to the Atomic Energy Control Board which review the location, design, construction and operation of proposed nuclear reactors and charged-particle accelerators (cyclotrons) and make recommendations on their health and safety aspects.

Although the Federal Government does not have authority to enforce health and safety measures in connection with the use of X-rays, the Department has established a committee to set X-ray safety standards and recommend procedures for use throughout Canada. The committee recommends that the sale of X-ray equipment be subjected to federal control and its installation to provincial control. Some provinces have enacted enabling legislation concerning X-ray equipment and some require registration of operators and equipment.

The Department serves as co-ordinator for federal departments and agencies that could deal with radiation accidents and gives short training courses in radiation protection. Direct protection services are provided to workers. Detection devices that workers wear on their bodies are examined periodically to determine the amount of radiation to which the worker has been exposed. Where there is hazard of ingestion or inhalation of radioactive substances, the worker's breath and urine are analysed and when there is an accident or an accident is suspected the person is examined in the "whole body counter", a device that measures radiation emanating from a living person.

The Department operates laboratories for monitoring and research. Radioactive fall-out is monitored over the whole country as are water, air and food products in the vicinity of nuclear reactors. Research is directed toward improvement of measuring radiation exposure; tracing radioactive fall-out elements through rain to soil, through plant tissue and thence to domestic animals and through the human body; and studying the effect of radiation on tissues, blood and cells in order to explore the relationship between radiation and disease.

Subsection 8.—Medical Research

Federal Government agencies have steadily increased their funds allocated for both intramural and extramural biomedical research to \$44,700,000 in 1967-68; funds designated in the Estimates for these purposes in 1968-69 total \$53,500,000, an increase of over 19.7 p.c. The principal agency engaged in intramural medical research is the Department of National Health and Welfare, which spent \$8,000,000 on research and development studies and related scientific activities in the fields of radiation protection, air pollution, occupational health, environmental health, biochemistry, epidemiology and health services. The Department of Veterans Affairs continued a variety of clinical studies in chronic disease problems, including a psychiatric research program, that amounted to \$357,000 in 1967-68. The National Research Council also conducts intramural investigations of importance to health in radiation biology and the biosciences.

Federal grants supporting the development of biomedical research and research personnel in universities and hospitals are channelled mainly through the Medical Research

Council, although significant outlays are made by other agencies in special fields such as public health, defence and dental research. Moreover, the expansion of research plant is one of the key objectives of the Health Resources Program of the Department of National Health and Welfare.

The Medical Research Council spent \$20,500,000 in 1967-68, of which \$7,759,000 was allocated for annual grants-in-aid, \$4,991,000 for three-year term research projects, \$2,638,000 for equipment grants, \$3,760,000 for research scholarships and fellowships, and \$1,351,000 for other research promotion. Its 1968-69 budget for these programs was increased to \$26,943,000.

Under the Public Health Research Grant, the Department of National Health and Welfare allocated \$4,090,000 in 1967-68 to applied and developmental research projects conducted by universities, hospitals, health departments and other non-profit health organizations; in addition, it gave \$124,000 for physiological research under the Fitness and Amateur Sport Grant, \$152,000 for research and demonstration projects on health aspects of mental retardation, and \$23,000 for smoking-and-health research. It is estimated that \$10,000,000 or 30 p.c. of the Health Resources Fund expenditures in 1967-68 was used to build research facilities as an integral part of this program to expand the training of health personnel at medical and dental schools and affiliated centres.

Other substantial grants in aid of research were made to the universities by the Defence Research Board for studies in arctic medicine and climatic physiology, aviation medicine, radiation protection and treatment, toxicology and other special areas. In 1967-68 this support totalled \$473,000. The remaining extramural program, for dental research administered by the National Research Council's Associate Committee on Dental Research, spent \$419,000 in 1967-68.

The principal voluntary agencies supporting medical research related to their special interests are the National Cancer Institute, the Canadian Arthritis and Rheumatism Society, the Multiple Sclerosis Society, and the Muscular Dystrophy Society. The Interdepartmental Committee on Medical Research provides a forum for the sharing of information and support of medical research to which the voluntary agencies are invited. The Medical Research Council reports to Parliament through the Minister of National Health and Welfare.

Subsection 9.—International Health

Canada actively assists and co-operates with the World Health Organization (WHO) and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Canada's candidacy for re-election to the WHO Executive Board was successful by almost unanimous support at the 21st World Health Assembly. Capital and technical assistance are provided to developing countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the various technical co-operation schemes (see pp. 148-151); during 1967, there were 380 trainees in Canada studying in a wide range of health disciplines under the Canadian International Development Agency program but with greatest concentration in undergraduate medicine and in public health.

Canadian experts in health legislation, health administration, nursing and related areas undertook specific assignments abroad during the year and teachers and specialists in a number of clinical fields were provided in response to requests from the developing countries. Capital assistance, primarily through the provision of Cobalt-60 beam therapy units for cancer treatment centres in the Colombo Plan area, was continued. During the year, the Advisory Team on the Viet-Nam Medical Program visited a number of centres in Viet-Nam and made recommendations regarding tuberculosis, rehabilitation, immunization, hospital equipment and other programs, most of which have been or are in the process of being implemented.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and medical care for persons arriving in Canada who require quarantine (see p. 276).

The Department is responsible for the enforcement of regulations governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by air pollution. Other responsibilities include the custody and distribution of biological, vitamin and hormone standards for WHO and certain duties in connection with the Single Convention on Narcotic Drugs, 1961, as well as Canada's representation on the Narcotic Commission of the United Nations.

Subsection 10.—Consultative and Technical Services and Special Programs

The extension of technical and consultative assistance to the provinces is a function of the Health Services Branch and the Health Insurance and Resources Branch of the Department of National Health and Welfare. The following services supply consultation and information, advise on health care projects, co-ordinate activities and planning, and exercise leadership in promoting high standards of service: Child and Maternal Health; Dental Health; Emergency Health; Epidemiology; Health Education; Laboratory of Hygiene; Medical Rehabilitation; Mental Health; Nursing Services; Nutrition; Occupational Health; Radiation Protection; Public Health Engineering; Research Development; Health Grants; Health Resources; Hospital Insurance and Diagnostic Services; Health Facilities Design; Medical Care Insurance and Research and Statistics. In addition, the Information Service of the Department produces and distributes a variety of literature, films and radio programs to inform and educate the public on health subjects.

The Department also conducts a number of specialized services to preserve health that are of national concern. These include: the Emergency Health Services which assist provincial and municipal governments to organize emergency medical, nursing, hospital and public health services (see p. 288); the Laboratory of Hygiene including the Virus Laboratory which serves as the national reference centre for the diagnosis of bacterial and viral diseases of man; and the Radiation Protection Division which is mainly responsible for safety measures to protect Canadian radiation workers (see p. 277). The Environmental Health Centre carries out advisory and research services in occupational health, aerospace medicine and public health engineering, which deal with health problems of interprovincial and international traffic and water resources management. The National Tuberculosis Reference Centre in Ottawa, administered by the Laboratory of Hygiene, was opened in 1968 to establish uniform standards in testing for resistance to anti-tuberculosis drugs.

Section 2.—Provincial and Local Health Services

Provincial governments are mainly responsible for the various health measures undertaken to prevent disease and improve the health standards of the community. These comprise the preventive health services, hospital services, mental health services, treatment services for tuberculosis and other diseases, and special treatment services and care of the chronically ill and disabled. They are usually administered by the provincial health departments or other official agency in co-operation with the hospitals and voluntary health organizations, the health professions and the teaching and research institutions.

Although the pattern of services is similar, provincial health organization, financing and administration vary to some degree. Most health functions are exercised by the provincial health departments but in some provinces certain programs, such as hospital insurance, medical care insurance, tuberculosis control, cancer control or alcoholism

programs, are administered by separate public agencies directly accountable to the Minister of Health. Voluntary organizations also provide specialized health services, often with some support from tax funds in the form of payment for services or support grants.

In general, the provincial health departments carry out over-all planning and direction of public health programs, administer certain specialized health programs, and assist through technical and financial aid the regional or county health units and city health departments that have been delegated responsibility for the basic public health services. In most provinces, the health unit systems, which serve mainly rural areas, are operated either by the province or jointly by the province and the local authority with the local authority having jurisdiction over county, municipality or larger area, while city health departments are administered by municipal or metropolitan boards of health. Several provincial health departments also directly administer health services to northern unorganized territories. The nucleus staff of a local health unit or department usually is composed of a full-time medical officer of health, a number of public health nurses and a public health inspector.

Local official programs to safeguard community health are concerned with environmental sanitation to ensure safe water, milk and foods; prevention and control of infectious diseases through use of vaccines and prophylactics; improvement of maternal and child health and dental health; registration of vital statistics; and health education and counseling. In addition, the larger city health departments have developed specialized services in such areas as mental health, home care, and rehabilitation of the chronically ill and the handicapped. More recently, health units and departments in most provinces have started health screening for chronic conditions and family planning clinics. The city health departments participate to some degree with the provincial authorities in accident prevention and in the health aspects of measures to control air, water and soil pollution.

Provincial health departments support the local programs by health grants and the provision of technical consultant services. Most of the mental and tuberculosis hospitals and clinics are provincially operated, as are treatment services for the venereal diseases, cancer, alcoholism and other specific diseases, and the laboratories that aid both the public health agencies and practising physicians in diagnostic and control procedures. The provincial agencies are primarily responsible for the collection and analysis of vital statistics and the study of the epidemiological and related social and economic conditions that affect health. They also give leadership in such fields as occupational health, nutrition, health education and pollution problems in collaboration with national health agencies. In order to maintain and improve health services, the provincial health departments recruit and train professional and technical personnel for the health fields and support public health research.

Subsection 1.—Public Health Services

Environmental Health.—The control of factors in the environment that are harmful to health is an expanding area of public health. Much of the work in community sanitation involves inspection duties to maintain safe milk, water and food supplies and sanitary conditions in sewerage and waste disposal systems and in public areas such as campsites and swimming pools. Air pollution, water pollution, radiation exposure and the use of pesticides have become major problems, necessitating the co-operative efforts of governments and other agencies in research and in planning effective control measures. Special water authorities in Ontario and Quebec have responsibility for all aspects of public water supply, sewerage systems and stream pollution, and in six other provinces special water agencies exercise similar functions jointly with the health departments. Six provincial health departments have implemented measures to control air pollution.

Occupational Health.—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industrial

management. Provincial agencies regulate working conditions and offer consultant and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting standards for health safety and accident prevention on the job. Most provinces maintain environmental health laboratories that study industrial health problems such as the effects of noise and air conditions on workers.

Communicable Disease Control.—The larger provincial health departments have separate divisions of communicable disease control headed by full-time epidemiologists whereas in the smaller provinces this function is combined with one or more community health services. Local health authorities organize immunization clinics for the public against diphtheria, tetanus, poliomyelitis, whooping cough, smallpox and measles. They also engage in case-finding and diagnostic services in co-operation with public health laboratories and private physicians. Special services for tuberculosis and venereal disease are noted on p. 283.

Health Education.—A basic concern of provincial health authorities is to stimulate public interest in important health needs. Most provincial health departments have a division or unit of health education directed by a full-time professional "health educator" which provides education materials to other divisions of the health department, to local health authorities and to voluntary associations. Many educational activities are directed to reducing habits harmful to health, such as cigarette smoking and the excessive use of alcohol and drugs.

Public Health Laboratories.—All provinces maintain a central public health laboratory and usually a number of branch laboratories to assist local health agencies and the medical profession in the protection of community health and the control of infectious diseases. Public health bacteriology (testing of milk, water and food), diagnostic bacteriology and pathology are the principal functions of the laboratory service, with medical testing for physicians and hospitals steadily increasing in volume.

Maternal and Child Health.—Public health nurses employed by the local health services carry out preventive health services to mothers, newborns and children through clinics, home and hospital visits and school health services. All provincial health departments have established maternal and child health consultant services that co-operate with the public health nursing services. The maternal and child health divisions established in five provinces also undertake studies in maternal and child care, including hospital care, and assist in the training of nursing personnel.

Nutrition.—Provincial health departments and some city health departments employ consultants in nutrition to extend technical guidance and education to health and welfare agencies, nursing homes and other care institutions and hospitals. They provide diet counselling to selected patient groups and conduct nutritional surveys and other research.

Dental Health.—Provincial dental public health programs have been largely preventive but increasing emphasis has recently been given to dental care. Dental clinics conducted by the local health services are very often restricted to pre-school and younger school age groups. A number of provinces send dental teams to remote areas and subsidize resident dentists to practice in areas lacking such services; the four western provinces have dental care schemes of varying coverage for welfare recipients. Other dental health programs are directed to the training of dentists and dental hygienists, the conduct of dental surveys and the extension of water fluoridation.

Subsection 2.—Mental Health Services

Mental health services in Canada are organized as part of provincial health services. Each province employs a director of mental health services, usually a psychiatrist, and one or more consultants in psychiatric nursing, clinical psychology, social work, occupational therapy or special education and also one or more psychiatrists specializing in paediatrics, geriatrics, mental retardation, alcoholism and drug addiction, or other related fields. As public health officers, the mental-health directors are responsible for the development of programs aimed at prevention of mental disease and for the general promotion of mental health, on their own and in co-operation with welfare, education, manpower, labour, and justice departments. As psychiatrists, they are responsible for development and supervision of the various health facilities for the treatment of people who suffer from mental or emotional disorders including disorders of character and behaviour, the mentally retarded, people with damage to the nervous system, alcoholics and drug addicts.

Mental health services differ in detail and stage of development from province to province; all are being extended and improved to take advantage of the best methods of treatment and prevention. The traditional pattern of long-term care of the mentally ill and retarded in large isolated mental hospitals and in hospitals for mentally defectives is giving way to new patterns of care designed to cure the afflicted or, failing that, to provide for them living and working environments that will enable them to lead reasonably normal lives.

The mental hospitals now place less emphasis on custodial care and more on intensive psychiatric treatment. They admit voluntary patients who receive much the same care and treatment as they would receive as patients in a general hospital. Many of those who would not profit from intensive psychiatric treatment—the severely retarded and persons with severe mental deterioration—are supported under welfare auspices in sheltered workshops, nursing homes or foster homes and continue to receive medical care. In addition to the mental hospitals, some special "psychiatric" hospitals provide intensive psychiatric care over short periods and psychiatric units and out-patient psychiatric departments are being established in large general hospitals. Local authorities or provincial health departments operate mental-health clinics in most large cities and travelling clinics visit suburban and rural areas. Psychiatric hospitals and mental-health clinics are establishing more day-care and night-care facilities through which some patients receive part-time hospital care and therapy during the day and go home at night and others go to work during the day and return to hospital in the evening for treatment.

The extension of mental-health services into the community is aimed at preventing severe mental and emotional breakdowns and at reducing the number of people requiring treatment in institutions. Through early diagnosis and treatment in a mental-health clinic or out-patient department of the hospital in the patient's neighbourhood, he may continue to live at home and pursue his normal occupation while receiving treatment.

Special centres are being established for the study and treatment of alcoholism and drug addiction, criminal psychopathy, psychiatric disorders in children, brain injuries and other neurological disorders. In addition, the provinces are amending the pertinent legislation in order to guarantee the rights of the mentally ill, the emotionally disturbed, and the intellectually retarded.

The continuing efforts by provincial health departments to provide more and better mental-health services reflect growing enlightenment about mental health on the part of the medical profession, the general public, and government agencies. Improvement in the care of psychiatric patients has been fostered by activities of voluntary organizations such as the Canadian Mental Health Association and the Canadian Association for the Mentally Retarded; by the professional advice of the Canadian Medical Association and the Canadian Psychiatric Association; by the national health grants and the national welfare grants for new services, professional training, and scientific research; and through the information programs of the Mental Health Division of the Department of National Health and Welfare.

Subsection 3.—Services for Specific Diseases or Disabilities

Tuberculosis.—The number of new active cases of tuberculosis in Canada rose slightly in 1967 to 4,601 or 23 per 100,000 population, while deaths dropped to 658, or a record low rate of 3.2. Provincial health departments, assisted by voluntary agencies, conduct major anti-tuberculosis programs based on intensive case-finding through community tuberculin testing and X-ray surveys, surveys of high-risk groups, hospital admission X-rays, and follow-up of arrested cases. BCG vaccine is used in most provinces to protect certain high-risk groups but only in Quebec and Newfoundland are children routinely immunized. Treatment, including hospital care, drugs and rehabilitation, is free in all provinces. The success of chemotherapy has generally shortened the hospital stay of tuberculosis patients and facilitated out-patient or domiciliary care.

Cancer.—Deaths from cancer in 1966 accounted for 17.9 p.c. of all deaths in Canada, and the standardized cancer death rate increased to 134.1 (151.2 for males and 112.2 for females). Special provincial agencies for cancer control, usually in the health department or a separate cancer institute, carry out cancer detection and treatment, public education, professional training, and research in co-operation with local public health services, physicians and the voluntary cancer societies. Although the provisions are not uniform, all cancer programs provide a range of free diagnostic and treatment services to both out-patients and in-patients financed by the hospital insurance programs or the federal-provincial cancer control grants. Hospital insurance benefits for cancer patients include diagnostic radiology, laboratory tests and radiology. The cancer control programs in Alberta, Saskatchewan and New Brunswick also pay for medical and surgical services; elsewhere, some of these costs are covered under the voluntary and public medical care insurance schemes.

Venereal Diseases.—Because of under-reporting, public health authorities consider the real incidence of syphilis and gonorrhoea to be much higher than the official rates. All health departments administer compulsory, free diagnostic and treatment services at public clinics; in areas lacking such clinics, private physicians are paid to provide free treatment. In addition, each province supplies free drugs to physicians for treating private cases. The local health services carry out case-finding and follow-up, and assist in treatment and health education measures.

Alcoholism.—In all provinces, health departments or other official agencies administer programs for the prevention and control of alcoholism. Although their scope varies, all alcoholism programs engage in public and professional education and conduct studies regarding the nature of alcoholism and related problems. Seven provincial alcoholism programs extend treatment services, mainly for out-patients, but most have established other types of treatment facilities such as in-patient centres, hostels, and special farms or prison centres for chronic offenders. Several provincial alcoholism agencies (Ontario and Quebec) have broadened their programs to include other addictions, and British Columbia supports a narcotic addiction foundation. Because addictions are widely prevalent, the hospitals, mental health services and other public and voluntary health and social agencies are also involved in their diagnosis and treatment.

Other Diseases or Disabilities.—Many services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been initiated by voluntary agencies assisted by federal and provincial funds. Today, treatment for specific conditions is available at hospital out-patient clinics and in-patient or day centres, at separate clinics and rehabilitation centres and under home care programs. (See pp. 287-288.)

Subsection 4.—Public Medical Care Insurance and Programs

Provincial Medical Care Plans.—Traditionally, patients have paid directly for personal health care services. For the services of physicians, especially, prepaid insurance has been replacing direct payment. At the end of 1966 about 12,000,000 Canadians, or 60 p.c. of the population, had some voluntary insurance protection against the cost of physicians' services. When plans of all types, private and public, are considered together, the total with some form of protection was about 16,400,000, or 82 p.c. of the population.

Government financing of personal health care has been increasing in two directions concurrently. First, for the indigent, most provincial governments have assured payments to physicians and several, as well, to dentists, pharmacists for prescribed drugs, optometrists and others. Such programs have operated in several provinces for many years and the remaining provinces have recently made similar provisions. Under the Canada Assistance Plan, the cost of the services can be shared by the Government of Canada. Secondly, for the general population, some provincial governments have introduced programs intended to ensure, if necessary by using tax revenue, that all residents can have physicians' services insurance. In Saskatchewan, coverage is compulsory, and no other agency is permitted to compete in the service area covered by the public plan. In British Columbia since 1965 and in Ontario since 1966, public agencies administer optional programs available to individual applicants. In Alberta in 1963 the government established minimum benefits and maximum premiums for existing voluntary insurance plans. In 1967 this arrangement was superseded by a plan similar to those in British Columbia and Ontario. The British Columbia and Alberta schemes cover a comprehensive range of physicians' services and also make provision for other health-care benefits to be included as part of the basic contract or as options at a somewhat higher premium cost. As of mid-1968, the publicly administered plans in Alberta and Ontario continued to emphasize coverage by individual contracts; private voluntary agencies were expected to offer coverage through group contracts. When Saskatchewan entered the national medical care plan on July 1, 1968 (see p. 270), the only change of importance was the broadening of the benefits to include eye refractions by physicians and optometrists. The entry of British Columbia on the same date involved substantial changes in the organization but little change in range of benefits or population coverage. The British Columbia Medical Services Commission became the single "public authority" and a number of non-profit voluntary plans were especially approved as enrolment and claims-paying agencies for it.

In Newfoundland, the population in the Cottage Hospital Districts (i.e., isolated outlying areas) may enrol in a salaried medical service scheme. (Additionally, all children under 16 years of age throughout the province are covered under the Children's Health Service, at no direct charge to their families, for physicians' services in hospital.)

All these plans except the Children's Health Service in Newfoundland use premiums. To ensure that the premium burden upon individuals is not too heavy, Saskatchewan and Newfoundland cover about three quarters of the total cost from general tax revenues. In Ontario, Alberta and British Columbia premiums of the needy, as defined by a simple test of income adequacy, are subsidized from general tax revenues. British Columbia had also used a special taxation-supported fund to help stabilize premium levels.

Saskatchewan.—Since July 1962 Saskatchewan has had a universal-coverage medical care program. The premiums are compulsory, the maximum for a family being \$24 a year. These premiums cover approximately 25 p.c. of the costs of the program. Among the medical services covered are home, office and hospital visits, surgery, obstetrics, psychiatric care outside mental hospitals, anaesthesia, laboratory and radiological services,

preventive medicine, and certain services provided by dentists. There are no waiting periods for benefits and no exclusions for reasons of age or pre-existing health conditions.

Physicians may elect to receive payment in four ways. First, the physician may receive payment directly from the public administering authority of 85 p.c. of the tariffs in the current schedule of fees of the organized profession after deducting the utilization fee, and accept this payment as payment in full. Secondly, patients and physicians may enrol voluntarily with an "approved health agency" that serves as intermediary, with respect to payment, between the public authority and the physicians; here also, the physician receives 85 p.c. of the net tariff as payment in full. Thirdly, a physician may elect to submit his bill directly to the patient who pays him and seeks reimbursement for 85 p.c. of the net approved amount from the public authority; the physician may bill the patient directly for amounts over and above the amount the public authority has paid. Fourthly, patient and physician may, if they agree, settle their accounts privately without involving any public authority or approved health agency.

Originally, payment to the physicians under the plan was 85 p.c. of the tariffs as published. Late in 1967 the percentage paid under the first, second and third payment methods was increased to 95 for office, home and hospital visits. In April 1968, utilization fees of \$1.50 for each office call and \$2.00 for each home and out-patient call payable by the patient to the physician, were introduced. The fee schedule of the medical profession was revised upward in August 1968 and at the same time payment reverted to 85 p.c. but now was calculated from the net amount of the physician's claim after the utilization fee had been deducted.

Alberta.—The Alberta Medical Plan introduced in October 1963 was primarily designed to help residents having poor health or low income to purchase voluntary medical care insurance from approved non-profit and commercial agencies. The plan was financed from personal premiums alone; premiums were subsidized by the government for persons with little or no taxable income. On July 1, 1966, this plan was supplemented by an extended health benefit plan for an additional premium.

On July 1, 1967, these plans were superseded by the Alberta Health Plan, operated by the Department of Health for all residents seeking individual and family enrolment. The new plan is divided into two parts—Basic Health Services and Optional Health Services, the latter being subdivided into Options A, B and C. The Basic Plan covers all services of physicians, with payment of 100 p.c. of the tariff; special dental surgery; limited optometric services; and podiatric and osteopathic services up to \$100 annually. Option A offers additional services not insured under the provincial hospital plan, including daily co-insurance charge in a standard ward (limited to 180 days a year if the patient is in a chronic hospital), differential charge for a semi-private room, certain hospital out-patient charges, and ambulance benefits up to \$100 a year. Option B covers prosthetic appliances and up to 80 p.c. of the cost of prescribed drugs; for prescribed drugs the subscriber pays 20 p.c. or \$1 per prescription, whichever is greater. Purchase and repair of artificial limbs, eyes and braces, prescribed by a physician, are covered up to \$300 a year. Option C offers chiropractic and naturopathic services up to \$100 a year.

Premium rates for the Basic Plan are \$76 a year for single persons, \$152 for families of two persons and \$200 for families of three or more. Options A and B cost an additional \$24, \$48 and \$72, respectively, and Option C an additional \$12, \$24 and \$36, respectively. For individuals or families with little or no taxable income, premiums for both the Basic Plan and Options B and C may be reduced by means of subsidies from the province.

British Columbia.—The original government-operated British Columbia medical plan which took effect in September 1965 was administered by an agency directed by repre-

sentatives of government and the medical profession. The benefits included most physicians' services as well as limited physiotherapy, special nursing, chiropractic and naturopathy services. For eligible residents, the government offered subsidies amounting to 90 p.c. of the premium for persons with no taxable income and 50 p.c. for persons with taxable income from \$1 to \$1,000. In addition, the government established a medical grant stabilization fund, initially of \$2,000,000, to cover possible deficits.

The plan became one of several carriers or agencies of the British Columbia Medical Services Commission when this body was established as the public authority (see p. 270), to operate a comprehensive program beginning July 1, 1968 under the federal Medical Care Act. Under this program the Commission sets out criteria for population coverage, levels of benefits and premiums to be charged, and these criteria must be adhered to by all approved non-profit carriers acting as agents. As of mid-1968, annual premiums were \$60 for single persons, \$120 for a family of two, and \$150 for a family of three or more.

Ontario.—The Ontario medical services insurance plan began paying benefits in July 1966. The plan, offered to all eligible Ontario residents on an individual and family enrolment basis, covers most physicians' services. The government pays, as a subsidy, the full premium of applicants who had had no taxable income during the preceding year or who were recipients of public assistance. It pays 50 p.c. of the premium for a single applicant who had a taxable income of \$500 or less; 50 p.c. of the premium for a family of two persons with a total taxable income of \$1,000 or less; and 60 p.c. of the premium for a family of three or more persons with a total taxable income of \$1,300 or less. Annual premiums in mid-1968 were \$70.80 for a single person, \$141.60 for a family of two, and \$177.00 for a family of three or more persons. A limited amount of group coverage insurance is offered but, in the main, such enrolment is left to voluntary private plans.

Health Care Programs for Welfare Recipients.—Provincial health benefit programs for specified categories of welfare recipients have been in operation for several years in Nova Scotia, Ontario, Alberta, Manitoba, Saskatchewan and British Columbia, and Newfoundland has long operated a plan providing care as required for persons in need. Each of these schemes provide certain physicians' services benefits under arrangements with the provincial medical associations, and in the western provinces a range of other health services.

Saskatchewan, Alberta, British Columbia and Ontario have recently introduced province-wide medical insurance schemes replacing previous provisions and providing automatic insurance coverage of physicians' services to welfare recipients, and Prince Edward Island, New Brunswick and Quebec have set up new medical welfare plans to provide physicians' services expressly for the welfare recipients. These changes have coincided with the introduction of the Canada Assistance Plan Act (see p. 310) and the Medical Care Act (see p. 270) under which federal contributions are made to provincial medical insurance plans and health care services provided by provinces to persons in need. All recipients of provincial welfare assistance are covered under most of these programs; Manitoba and Nova Scotia give coverage to selected categories of needy persons.

The range of services covered under each scheme is virtually comprehensive and includes physicians' visits in the home, office and hospital, surgery, diagnostic and therapeutic procedures, and obstetrical care. All generally used prescription drugs are included in New Brunswick, Manitoba, Saskatchewan and British Columbia; extensive dental care and optical care are provided in the four westernmost provinces, although certain services may be subject to special authorization, to dollar limits, or both. Ontario has a basic dental-care program for recipients of mothers' and dependent fathers'

allowances and their children, and shares the cost of prescribed optical care, prosthetic appliances, drugs and dental care provided at municipal discretion. Such services as home nursing, appliances, physiotherapy, podiatry, chiropractic and emergency transportation may also be paid under some programs.

Subsection 5.—Services for the Disabled and Chronically Ill

The success of rehabilitation programs for injured workers, veterans, handicapped children and other disability groups has encouraged more recent efforts to extend such services to all handicapped persons. Physical medicine and rehabilitation departments have been established in teaching hospitals and in most veterans' and children's hospitals. There are about 40 children's hospitals and rehabilitation centres located in the main cities; many children are also treated at general hospitals, or at rehabilitation centres that serve both adults and children. Five rehabilitation centres are operated under workmen's compensation programs. Services for veterans are dealt with at pp. 327-329.

Hospital services available to in-patients and out-patients include physical medicine, physiotherapy, occupational therapy and social services; most of the children's hospitals and the teaching hospitals also supply speech therapy. The rehabilitation centres provide comprehensive medical, psychosocial and vocational services to more severely disabled persons. Provincial and community agencies providing rehabilitation and home care services co-operate in the rehabilitation of disabled persons.

Most large general hospitals operate out-patient clinics for various diseases and disabilities, such as arthritis and rheumatism, diabetes, glaucoma, speech and hearing defects, heart diseases and orthopaedic and neurological conditions. Voluntary agencies concerned with such specific disability groups as arthritics, the blind, the deaf, children suffering from cystic fibrosis, haemophilia or muscular dystrophy, the mentally ill or retarded, or disabled persons generally, are also broadening their rehabilitation services to include counselling, personal aids and appliances, transportation, employment and education, sheltered workshops and services for the homebound. Home care programs, under either hospital or community sponsorship, have been established in five provinces to provide nursing, homemaker, physiotherapy and other services to the disabled, the chronically ill, the aged, and the convalescent.

Provincial health, welfare and education departments and voluntary agencies are developing specialized services for physically and mentally handicapped children. Most provinces have registries of handicapped children, of varying coverage, and these are being found increasingly useful in the planning and co-ordination of rehabilitation services. In addition to medical rehabilitation, health departments and the crippled children's societies provide family counselling, recreation, transportation and foster home care; travelling clinics extend periodic diagnostic and treatment services to outlying areas. Special schools or classes for various groups of handicapped children are operated by local school boards in the main cities but most of the 15 residential schools for the deaf and the six for the blind are operated under provincial auspices.

Regional prosthetic research and training units, supported by national health grants, have been set up in rehabilitation centres in Montreal, Toronto and Winnipeg, and in the Bio-Engineering Institute of the University of New Brunswick. Artificial limbs and prosthetic appliances are available in 12 Prosthetic Centres across Canada in accordance with provisions determined by provincial health departments. A federal-provincial program assists in the extraordinary rehabilitation, maintenance and counselling costs on behalf of children with thalidomide-induced defects.

Ten university schools offer training in physical therapy and/or occupational therapy and three provide training in audiology and speech therapy. In the year ended Mar. 31, 1968, of the \$40,370,400 made available through the general health grants to assist the provinces in their rehabilitation programs, \$2,885,550 was specifically allocated to the Medical Rehabilitation and Crippled Children Grant. These grants are used to develop medical rehabilitation personnel through grants to the university schools and student bursaries, for equipment and for research.

Section 3.—Emergency Health Services

Federal concern with emergency health matters began in 1951 when the responsibility for civil defence was transferred from the Department of National Defence to the Department of National Health and Welfare and the Civil Defence Health Services group was formed within the Department to make plans for health services in a wartime emergency. In 1959, the Civil Defence Order assigned special powers and duties to several Ministers of the Crown to prepare and to assist the provincial and municipal governments to prepare for war emergencies (this Order, as amended in 1963, was replaced in 1965 by the Civil Emergency Measures Planning Order) and the Canada Emergency Measures Organization was created to co-ordinate civil-defence planning (see Chapter XXVI, Part III). At the same time, the Minister of National Health and Welfare established the Emergency Health Services Division in his Department.

The Emergency Health Services Division, which is supported by an advisory committee, encourages the provinces to develop their own emergency health services divisions. These are organized under a provincial director who is generally assisted by a health-supplies officer and a nursing consultant. A staff medical officer represents the federal Emergency Health Services in each provincial organization.

The provincial emergency health services have four tasks: they ensure effective functioning of health services so that vital health services will be maintained in an emergency or reorganized after a disaster; they encourage and co-ordinate local planning for the development of emergency medical units; they inform and educate the public through courses in first aid to the injured and in home nursing, and train professional health workers, students and volunteers for their functions during an emergency; and they dispose emergency medical units of the national stockpile at strategic locations. Since 1967 this last activity may be financially supported by the Federal Government through the Emergency Health Services Division.

Not all provincial and municipal health departments have developed their emergency planning to such an extent that they could function in a wartime disaster. Some, however, have planned their emergency measures so that they have been able to meet peacetime disasters successfully. Many emergency medical units have been strategically located and the governments generally are agreed upon the objective of emergency health planning.

Section 4.—Hospital and Other Health Statistics

Statistical information on the health of Canadians is limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established series covering operations under the federal-provincial hospital insurance program (pp. 272-274). Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 243-246; those on hospital statistics in Subsection 1 following; those on notifiable diseases in Subsection 2; and those relating to physicians and their earnings in Subsection 3.

Subsection 1.—Hospital Statistics*

Canadian hospitals are classified, for statistical purposes, according to (1) type of ownership, which can be public, private or federal, and (2) type of service provided, which can be general, allied special (chronic, convalescent, rehabilitation, maternity, communicable disease and orthopaedic), mental or tuberculosis. General hospitals, which account for the greater number of beds, are subdivided by size, based on rated bed capacity.

The number of hospitals operating in Canada increased from 1,421 in 1966 to 1,424 in 1967, resulting in a 2-p.c. increase in total rated bed capacity from 207,309 to 211,422 (Table 5). The number of rated beds per 1,000 population (10.4) remained the same as in 1966. The proportion of rated beds accounted for by general and allied special hospitals has been rising over the past few years, while the proportions for mental and tuberculosis hospitals have been declining. In 1967, 55.8 p.c. of the rated beds, or 5.9 beds per 1,000 population, were accounted for by general hospitals, ranging from 5.0 in Quebec to 7.1 in Saskatchewan (Table 6). Mental hospitals accounted for 31.0 p.c. of the rated beds (3.2 per 1,000 population), allied special hospitals had 10.9 p.c. (1.2 per 1,000 population) and the remainder (2.3 p.c.) were located in tuberculosis sanatoria (0.2 beds per 1,000 population).

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: *Hospital Statistics*, Vols. I to VII (Catalogue Nos. 83-210 to 83-216); *Mental Health Statistics*, Vol. III (Catalogue No. 83-205); *Tuberculosis Statistics*, Vol. II (Catalogue No. 83-207); and *List of Canadian Hospitals and Related Institutions and Facilities* (Catalogue No. 83-201).

¹ Based on estimated population as at June 1, 1967.

Although data pertaining to the number of hospitals in operation, their classification and their rated bed capacities (Tables 5 and 6) were available for 1967 at the time of preparation of this Subsection, 1966 data were the latest available for Tables 7 to 13 and 1964 data for Tables 14 and 15.

Total adult and child admissions to Canadian hospitals exceeded 3,253,000 in 1966, an increase of 1.0 p.c. over 1965 (Table 7) but the number of admissions per 1,000 population decreased from 164 to 162; admissions to general hospitals numbered 3,090,900 or 154 per 1,000 population. In 1966 there was an average daily population of 178,980 patients in Canadian hospitals as compared with an average of 180,650 in 1965. Of the 1966 average daily total, general hospitals accounted for 50.7 p.c. and mental hospitals for 36.5 p.c. Percentage occupancy varied with the type of hospital and was highest in private mental hospitals (101.9 p.c.) and lowest in federal tuberculosis sanatoria (65.4 p.c.).

7.—Movement of Patients and Patient-Days in Operating Public, Private and Federal Hospitals, 1965 and 1966

NOTE.—“Patients” refers to adults and children. All ratios are based on population estimates as at June 1 of the year concerned.

¹ Based on rated bed capacity.

In 1966 the average length of stay of adults and children separated from public general and allied special hospitals was 11.7 days, little changed from 1965. Table 8 shows the variation in average length of stay by type of hospital and by region. The chronic, convalescent and rehabilitation hospitals, with an average length of stay of 151 days in 1966, represent the upper limit, far exceeding that of other types of hospital. In public general hospitals length of stay increases with bed capacity, usually because of the greater availability and utilization of more complex services in larger hospitals to which more severe cases are referred.

Total full-time personnel in Canadian hospitals increased by 3.9 p.c. from 274,650 in 1965 to 285,443 in 1966. In all general hospitals there were 192.3 full-time personnel per 100 rated beds, 61.9 in mental hospitals and 86.0 in tuberculosis sanatoria (Table 9). The proportion of the civilian labour force employed both full-time and part-time in all Canadian hospitals gradually increased from 3.7 p.c. in 1961 to 4.3 p.c. in 1966.

The total revenue for all public hospitals in 1966 was \$1,477,700,000, an increase of 14.5 p.c. over 1965. The proportion of total revenues accounted for by net in-patient

earnings ranged from 76.8 p.c. in public mental hospitals to 93.3 p.c. in public allied special hospitals (Table 10). In public general hospitals revenue amounted to \$1,114,367,000 in 1966, also an increase of 14.5 p.c. over 1965.

Total expenditures in all public hospitals for 1966 were \$1,544,700,000, an increase of 15.1 p.c. over the previous year (Table 10). Gross salaries and wages represented the largest expenditure item ranging from 63.8 p.c. in "other" allied special hospitals to 71.3 p.c. in mental hospitals. In public general hospitals, 1966 expenditures at \$1,170,390,000, were up 15.0 p.c. over 1965. The proportion of expenditures allocated to gross salaries and wages was lower in the Atlantic Provinces than in other provinces (Table 11).

In public general hospitals the cost per patient-day of care increased 13.2 p.c. from \$34.05 in 1965 to \$38.56 in 1966. In public general hospitals it was lowest in the 10-24 bed size (\$26.13) and highest in hospitals with 1,000 or more beds (\$46.24), as shown in Table 12. Provincially, the cost per patient-day varied from \$26.38 in Prince Edward Island to \$49.07 in Quebec (Table 13).

The per capita cost of operating and maintaining all public hospitals increased by nearly 63 p.c. in the period 1961-66, from \$47.46 to \$77.18.

¹ Adults and children.

Hospital Morbidity.—A growing need for additional information on illness in Canada was met in part by a statistical program undertaken for 1964 involving separations (discharges and deaths) from the general and allied special hospitals. The program provided data on primary diagnosis, days of care, length of illness and age composition for all hospital patients except those in mental hospitals and tuberculosis sanatoria. (Age, sex and diagnostic information on persons treated in mental hospitals and in tuberculosis sanatoria has been available at the national level for many years but no similar information has been available for persons treated in the other kinds of hospitals.) About 100 out of every 1,000 persons are hospitalized during a year and, of these, 96 or 97 are treated in general and allied special hospitals. The 1964 data were the latest available at the time of preparation of this Subsection.

It should be noted that the picture of morbidity provided by these statistics is not, of course, complete. A total morbidity picture would include not only the morbidity covered by in-patient hospital care but also out-patient morbidity, morbidity covered by treatment outside the hospitals, and morbidity for which no treatment is received. Nevertheless, the illnesses that receive hospital care are, in general, more serious and more important than the illnesses that do not receive hospital care and this, together with the fact that the diagnostic quality of hospital morbidity statistics is very high, makes hospital morbidity statistics a most important source of information. Tables 14 and 15 present adult and child patients (excluding newborn) in terms of 17 diagnostic categories (Canadian) which consolidate the much more detailed international classification of diseases.

¹ See footnote to Table 14, p. 297.**Subsection 2.—Notifiable Diseases***

Three categories on the notifiable list established by the Dominion Council of Health continued to predominate in 1967—venereal diseases (24,696 cases), scarlet fever and streptococcal sore throat (20,121 cases) and infectious and serum hepatitis (8,224 cases).

The rate of venereal disease notifications, which had dropped from 121.3 per 100,000 population in 1964 to 117.2 in 1965 and 1966, increased slightly to 121.0 in 1967. Infectious and serum hepatitis, which had declined steadily over a number of years to a rate of 29.4 per 100,000 population in 1966, increased to 40.3 in 1967. Scarlet fever and streptococcal sore throat, however, had risen from 55.0 cases per 100,000 in 1964 to 100.9 in 1966 but decreased slightly to 98.6 in 1967.

* Prepared in the Public Health Section, Health and Welfare Division, Dominion Bureau of Statistics.

Subsection 3.—Numbers of Physicians and Earnings of Those in Private Practice

There were 22,816 physicians in Canada (exclusive of those in the Yukon and Northwest Territories) in August 1967, or one physician for every 894 persons of the population. Table 18 gives the provincial distribution and population/physician ratios as calculated for 1967, and shows also the historical trends for Canada since 1901. British Columbia has the most favourable provincial ratio of physicians to population, followed by Ontario and Manitoba.

18.—Physicians and Population per Physician, 1901-67, and by Province, 1967

NOTE.—The three sets of figures differ in coverage. An estimate for 1967 comparable in coverage to the 1962 figure of 21,011 physicians would equal 23,601 physicians and 865 persons per physician.

¹ Department of National Health and Welfare data (includes physicians in the Territories, non-registered physicians and all residents and senior interns). ² Estimate. ³ Source: Canadian Mailings Limited, *List Catalogue*, August 1967. Excludes non-registered physicians and immigrant senior interns.

Earnings.—More than 98 p.c. of the earnings of privately practising physicians and surgeons in Canada were obtained from fees charged for individual items of professional service. The average gross professional earnings of fee-practising physicians in 1966 amounted to \$35,223, a figure 7.4 p.c. higher than in 1965 and 53.7 p.c. higher than in 1959. The highest average gross earnings in 1966 were reported in Saskatchewan at \$40,150. In Ontario, Alberta and British Columbia they were above the national average and in the remaining provinces they ranged from \$33,589 in Manitoba to \$26,284 in Prince Edward Island. Generally, throughout the eight-year period 1959-66, average gross earnings have been at a higher level in Newfoundland, Ontario and the western provinces than in Quebec and the Maritime Provinces.

The net returns to physicians, after deduction of the expenses of professional fee practice, reveal similar geographic patterns, as shown in Table 19. Net earnings for Canada as a whole averaged \$23,262 in 1966, 5.4 p.c. higher than in 1965 and 59.4 p.c. higher than

in 1959. The highest provincial average net income was reported by Ontario physicians at \$25,456, followed by Alberta physicians at \$24,356; the lowest average net income was reported in Prince Edward Island.

¹ Includes incidental wages and salaries.

² Excludes physicians employed on a salaried basis under the Cottage Hospital Medical Service and by subsidized voluntary prepayment plans. The estimated number of such excluded physicians in 1965 was 95.

³ Excludes some physicians employed on a salaried basis in private group-practice. The estimated number of such excluded physicians in 1965 was 57.

⁴ Data for the Yukon and Northwest Territories are posted for record only.

⁵ Includes net professional fees after deducting expenses of practice, and wages and salaries incidental to fee practice.

PART II.—WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income-maintenance measures such as the Canada Pension Plan, old age security pensions, the guaranteed income supplement program, family allowances, youth allowances and unemployment insurance, where nation-wide co-ordination is required, are administered federally. The Federal Government gives substantial aid to the provinces in meeting the costs of public assistance and also provides services for special groups such as veterans, Indians, Eskimos and immigrants. The Department of National Health and Welfare is generally responsible for federal welfare matters although the Departments of Veterans Affairs, Indian Affairs and Northern Development, and Manpower and Immigration operate programs for specific groups.

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Co-ordination in welfare matters between different levels of government and between government and voluntary authorities is facilitated by the National Council of Welfare, an advisory body to the Minister of National Health and Welfare. The Council consists of the federal Deputy Minister of Welfare who acts as chairman, the provincial deputy ministers of Welfare, and ten other persons appointed for three-year terms by the Governor in Council.

Section 1.—Federal Government Programs

Subsection 1.—Canada Pension Plan

The Act establishing the Canada Pension Plan received Royal Assent on Apr. 3, 1965 and was proclaimed in force on May 5 of the same year. The collection of contributions commenced in January 1966, in January 1967 the first benefits were paid in the form of Retirement Pensions and in February 1968 the first survivors' benefits were paid. The Plan represents an important milestone in Canadian social development. It will enable millions of people to make financial provision for their retirement and to protect themselves and their dependants or survivors against loss of income in the event of the disability or death of the head of the family.

The Plan is universally applicable throughout Canada, except in the Province of Quebec where a comparable pension plan has been established. The Canada and Quebec Pension Plans, however, are closely co-ordinated and operate virtually as a single program. Together, they cover almost all members of the labour force in Canada. Benefit credits accrued under the Canada or Quebec Plans are portable throughout Canada. A contributor who may have worked for more than one employer during his lifetime or who may be self-employed for all or part of his working life will accumulate pension credits regardless of where he may work in Canada. In addition, benefits under the Plan are payable to beneficiaries whether or not they live in Canada. Every contributor to the Plan must have a Social Insurance Number so that his pensionable earnings may be accurately recorded for benefit purposes.

The maximum pensionable earnings for a year were \$5,000 for both 1966 and 1967, \$5,100 for 1968 and \$5,200 for 1969. From 1970 to 1975, the figure of \$5,200 will be adjusted in line with changes in the Pension Index which, in turn, is based on the Consumer Price Index. Beginning in 1976, the maximum pensionable earnings for a year will be adjusted in accordance with changes in the Earnings Index which will reflect changes in average wage and salary levels in Canada.

To participate in the Plan, a person must be between the ages of 18 and 70 and earn more than \$600 yearly as an employee, or at least \$800 if he is self-employed. As of 1969, contributions are made on earnings between \$600 and \$5,200 a year in the case of both employees and self-employed persons. Employees contribute at the rate of 1.8 p.c. and a matching contribution is made by their employers; self-employed persons contribute at the rate of 3.6 p.c. No contributions are to be made by persons while they are receiving disability pensions. Although contributions are made on annual earnings between \$600 and the maximums referred to above, rates of benefit are calculated on total earnings up to that maximum. That is, while contributions are not paid on the first \$600 of annual earnings, that amount is nevertheless included in the calculation of benefits.

The earnings-related component of the benefit which a person is entitled to receive under the Canada Pension Plan is based on the contributor's average pensionable earnings. Before this average is calculated, however, all earnings are adjusted in line with the applicable maximum on pensionable earnings during the benefit year. Thus, when a benefit first becomes payable, the earnings on which it is based are related to the maximum on pensionable earnings at that time rather than to the maximum when the earnings were received.

Benefits are classified under three main headings: Retirement Pensions; Survivors' Benefits, consisting of a widow's pension, a disabled widower's pension, orphans' benefits, and a lump sum death benefit; and Disability Pensions for contributors, with additional benefits for their dependent children.

In 1969, *Retirement Pensions* are payable to contributors who are 66 years of age or over provided that, if under age 70, they are retired from regular employment. From 1970 on, Retirement Pensions will be payable to contributors who have retired from regular employment at the age of 65. For contributors who have reached age 70, Retirement Pensions are payable regardless of whether or not they are retired. They become payable at their full rates beginning in January 1976. These rates amount to 25 p.c. of what the updated pensionable earnings of contributors have averaged since Jan. 1, 1966, or from age 18, whichever comes later.

Contributors who become eligible for Retirement Pensions prior to 1976 receive reduced amounts. In the calculation of retirement pensions that commence during this period, pensionable earnings are averaged over ten years or 120 months. The only exception is where a Disability Pension has been paid, in which case the time during which that pension was in pay is deducted from the ten years and the remaining period used for averaging purposes. In the calculation of Retirement Pensions that commence after 1975, provision is made to assist the contributor who may have had periods of low or no earnings during his contributory period. This is accomplished by dropping out the number of months during which contributions may have been made after age 65, and either by using the pensionable earnings in those months in place of earlier periods of lesser or no earnings, or by dropping such pensionable earnings out of the calculation if they are less favourable to him. Also dropped out of the calculation are up to 15 p.c. of the number of months he could have contributed before age 65 and the earnings in an equal number of months, although the drop-out must not reduce the number of months for averaging purposes to fewer than 120.

A person under 70 years of age who is in receipt of a Retirement Pension must meet an earnings test. In 1969, the maximum annual remuneration from employment he may earn without affecting the amount of his pension is \$900. Should his yearly earnings exceed this figure, his pension is reduced as follows: when employment earnings are between \$900 and \$1,500, the reduction will equal 50 p.c. of the amount over \$900, or an amount of up to \$300 per year; if earnings exceed \$1,500, the amount deducted will be \$300 plus the actual amount earned over \$1,500. However, the amount of pension is not subject to reduction for any month in which the pensioner does not earn over \$75. At age 70, a contributor is entitled to receive the full amount of his Retirement Pension regardless of the amount of his earnings.

Survivors' Benefits became payable in February 1968. They are paid to or on behalf of the survivors of a deceased contributor who has made contributions for the minimum qualifying period, which is three years for those whose benefits commence before 1975.

A woman who is widowed between ages 45 and 65 is entitled to a Widow's Pension consisting of the flat-rate payment plus $37\frac{1}{2}$ p.c. of her husband's Retirement Pension. The flat-rate component is equal to \$25 multiplied by the ratio of the Pension Index for the year in which the contributor dies to the Pension Index for 1967. Thus, for 1968, the flat-rate component was \$24.50 and for 1969 it is \$26.01. Should her husband not be in receipt of a Retirement Pension at the time of his death, such a pension is calculated in prescribed manner for the purposes of computing the amount of the Widow's Pension. If a woman is widowed under age 45, the same pension is paid provided she has dependent or disabled children or is herself disabled. If she does not meet any of these requirements, her pension is reduced by an amount equal to $1/120$ for each month she is less than age 45 at the time of her husband's death. Accordingly, if a woman is widowed at age 35 or less, and has no dependent or disabled children and is not herself disabled, she will not receive a Widow's Pension until she reaches 65 years of age, unless she becomes disabled in the meantime.

A widow aged 65 or over receives a Widow's Pension equal to 60 p.c. of her husband's Retirement Pension, regardless of her age at the time her husband died or whether she was receiving a Widow's Pension before she became 65. Again, if her husband was not in receipt of a Retirement Pension at the time of his death, one is calculated in prescribed manner in order to compute the amount of the Widow's Pension. Women who receive Widows' Pensions may also have contributed to the Canada Pension Plan themselves and consequently may be entitled to Retirement or Disability Pensions in their own right. In such cases, the Widow's Pension will be combined with the other pension, in accordance with a prescribed formula, but the combined total cannot exceed the maximum Retirement Pension payable under the Act.

Orphans' Benefits are payable on behalf of a deceased contributor's unmarried dependent children. The rate for each of the first four children is equal to the flat-rate component of the widow's pension (\$26.01 for 1969); for more than four children the total benefit, which is divided equally among the children, is the sum of \$26.01 for each of four and half of that amount for each child in excess of four. Benefits are payable until the child reaches age 18 or up to age 25 if he continues to attend school or university full time.

A Disabled Widower's Pension is payable where such person is wholly or substantially dependent on his wife for financial support at the time of her death. The test of disability is the same as that for a person who claims a Disability Pension and the pension formula is the same as that for a disabled widow.

When a contributor dies, a lump sum Death Benefit equal to six times his monthly Retirement Pension is paid to his estate. This benefit is subject to a maximum of 10 p.c. of the maximum on pensionable earnings which, for 1969, would mean a payment not exceeding \$520. Should a contributor not be in receipt of a Retirement Pension at the time of his death, a calculation is made in prescribed manner for purposes of establishing the amount of his Death Benefit.

Disability Pensions become payable in 1970. A contributor is considered to be disabled if he has a physical or mental disability that is so severe and likely to continue so long that he cannot regularly engage in any substantially gainful occupation. Disability Pensions, plus benefits for the dependent children of disabled contributors, are available provided contributions have been made to the Plan for the required minimum period, which is five years for contributors whose Disability Pensions will commence before 1976. The amount of the pension consists of a flat-rate payment equal to the flat-rate component of a widow's pension plus 75 p.c. of what the contributor's monthly Retirement Pension would have been had he reached age 65 when his Disability Pension commenced. Benefits are payable on behalf of a disabled contributor's dependent children at the same rates and under essentially the same circumstances as the orphan's benefits. All monthly benefits are adjusted upward annually if changes in the Pension Index warrant it. Benefits in payment in 1967 were increased by 2 p.c. effective January 1968 and those in payment in 1968 were increased by 2 p.c. effective January 1969.

Any contributor or beneficiary under the Plan has the right to appeal decisions with which he is dissatisfied. Appeals by employees and employers regarding coverage and contributions are first made to the Minister of National Revenue and, if the individual is not satisfied with the Minister's decision, he may appeal to the Pension Appeals Board whose decision is final. For self-employed persons, appeals with reference to the assessment of their earnings for Canada Pension Plan purposes are treated in the same way as appeals under the Income Tax Act. With respect to benefits, there is a three-stage appeal procedure: first, to the Minister of National Health and Welfare; secondly, to a Review Committee; and thirdly, to the Pension Appeals Board whose decision is final.

The legislation provides for the investment of the funds that accrue from monthly contributions, less the estimated amounts required to pay benefits and administrative costs over a three-month period. These funds are made available to each province on the basis of the relationship between the contributions made to the Plan by and on behalf of

residents of that province and the total contributions made to the Plan. Funds not borrowed by the provinces are invested in federal securities. The Canada Pension Plan is entirely self-supporting in that all benefits and all costs incurred in the administration of the program are financed solely from the contributions made by employees, employers and self-employed persons and the interest earned from the investment of funds.

An Advisory Committee representing employers, employees, self-employed persons and the public, which was established in 1967, reviews from time to time the operations of the Plan, the state of the investment fund, and the adequacy of coverage and benefits; its reports to the Minister of National Health and Welfare are included in the annual reports on the Plan. The legislation authorizes arrangements to be made with other countries to achieve as full coverage of persons in the labour force in Canada as is possible and to ensure the portability of pension credits between Canada and the countries concerned.

The Minister of National Health and Welfare is responsible for the administration of all parts of the program except coverage and the collection of contributions which come under the jurisdiction of the Minister of National Revenue. The Unemployment Insurance Commission is responsible for the assignment of Social Insurance Numbers and for the maintenance of the Central Index. The Department of Finance is responsible for the administration of the Canada Pension Plan Account and the Canada Pension Plan Investment Fund. The Office of the Comptroller of the Treasury, in addition to its statutory responsibility, is giving temporary assistance to the Department of National Health and Welfare in the operation of the electronic data processing service which is required to maintain the records of earnings of contributors and to calculate benefits payable under the Plan. The Chief Actuary, Department of Insurance, is responsible for the preparation of reports on the future financial progress of the Plan and on the effect on the Fund of proposed amendments to the Plan.

The Canada Pension Plan Administration of the Department of National Health and Welfare consists of a head office establishment in Ottawa and a network of 39 District Offices located in the major population centres in Canada outside the Province of Quebec and 103 local offices which operate on a part-time basis.

Subsection 2.—Old Age Security and Guaranteed Income Supplement

Old Age Security.—Under the Old Age Security Act of 1951, as amended, the Federal Government pays a monthly pension to all persons who meet the necessary residence and age qualifications. Prior to 1966, the pension was payable to those aged 70 or over but in 1966 a reduction in pensionable age from 70 to 65, to be completed over a five-year period, was begun. In 1969, the pension is payable to those aged 66 or over and from 1970 on it will be payable to those aged 65 or over. Until 1967 the pension amounted to \$75 a month but in 1968 and succeeding years the amount may be adjusted in line with changes in the Pension Index developed for the Canada Pension Plan (see p. 303). Accordingly, the pension was increased to \$76.50 a month in January 1968 and to \$78 a month in January 1969.

The old age security pension is payable to a person of attained age who has resided in Canada for ten years immediately preceding the approval of his application for the pension. Any gaps in the ten-year period may be offset if the applicant had been present in Canada in earlier years for periods of time equal in total to double the length of the gaps; in this case, however, the applicant must also have resided in Canada for one year immediately before his application for pension may be approved. The pension is also payable to persons of attained age who have left Canada before reaching that age but who have had 40 years of residence in Canada since age 18. A pensioner may absent himself from Canada and con-

tinue to receive payments. If he has lived in Canada for 25 years since his 21st birthday, payment outside of Canada may continue indefinitely; if not, payment is continued for six months, in addition to the month of departure, and is then suspended, to be resumed only with the month in which he returns to Canada.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital, to which application is made for pension. The regional office in Edmonton administers accounts for and receives applications from residents of the Yukon and the Northwest Territories. The Old Age Security plan is financed through a 3-p.c. sales tax, a 3-p.c. tax on corporation income and, subject to a limit of \$240 a year, a 4-p.c. tax on taxable personal income. The revenues from these sources are paid into a separate fund called the Old Age Security Fund, from which are paid the Old Age Security pensions and, from Jan. 1, 1967, benefits under the Guaranteed Income Supplement program.

Guaranteed Income Supplement.—A 1966 amendment to the Old Age Security Act provides for the payment of a monthly guaranteed income supplement to Old Age Security pensioners who have little or no income other than the pension. The supplement is limited to pensioners born on or before Dec. 31, 1910, who by reason of age are or will be unable to benefit substantially from the Canada or Quebec Pension Plans. The program commenced on Jan. 1, 1967. Beginning at that date, the maximum supplement was \$30 a month; in any year after 1967, it is to be 40 p.c. of the amount of the flat-rate Old Age Security pension. With the escalation of that pension effected January 1968, the maximum supplement was increased to \$30.60 a month and commencing January 1969 it was \$31.20 a month. Thus, pensioners with only the Old Age Security pension receive a guaranteed annual income of \$1,310 for a single pensioner and, for a married couple who are both pensioners, \$2,621. This consists of the monthly \$78 pension and the monthly supplement of \$31.20 which is subject to an income test. Pensioners with income in addition to their old age security pension may receive partial benefits.

The maximum supplement is reduced by \$1 a month for every full \$2 a month of income over and above the Old Age Security pension and any supplement that may have been received. Income for this purpose is the same as that computed in accordance with the Income Tax Act. In the case of a married couple, each is considered to have one half of their combined income. Where one spouse will not be receiving an Old Age Security pension at any time in the current year, six times the amount of the monthly Old Age Security pension is deducted from one half of the combined income in calculating the income of the pensioner for Guaranteed Income Supplement purposes. Payments will not be made to married couples unless both spouses submit returns. However, in order to prevent undue hardship when no statement of income is obtainable from one spouse, the other, in certain circumstances, may be deemed to be single for purposes of determining income. Furthermore, although marital status is determined as at Dec. 31 of the preceding year, even if this status should change in the current year, a special provision allows a person to be deemed either married or single in the preceding year.

If a pensioner who is in receipt of a supplement leaves Canada, the supplement will be paid for the month of departure and for six further months. Payment will then be discontinued until his return.

The Guaranteed Income Supplement program is administered in conjunction with the Old Age Security pension program. An application for the supplement is sent to each person when he begins to receive the Old Age Security pension and subsequently at the beginning of each calendar year. Entitlement is re-assessed each year on the basis of the pensioner's income in the preceding year.

¹ Three months; Guaranteed Income Supplement program commenced Jan. 1, 1967.

Subsection 3.—Family Allowances

The Family Allowances Act of 1944 assists in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances. The Province of Quebec introduced its own family allowances program, supplementing the federal scheme, under legislation enacted in 1967 (see p. 317).

Allowances are payable in respect of every child under age 16 who was born in Canada, or who has been a resident of the country for one year, or whose father or mother has been domiciled in Canada from a date three years immediately prior to the date of birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under 10 years of age and \$8 for each child age 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school attendance legislation, who ceases to be maintained by a parent or who ceases to be a resident of Canada, or on behalf of a girl who is married and under age 16.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. The Regional Director located at Edmonton also administers the accounts of residents in the Yukon and Northwest Territories.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is payable monthly for the first year of the child's residence in Canada, is intended to bridge the gap until the child becomes eligible for family allowances. The eligibility requirements, other than that relating to residence, are the same for family assistance as for family allowances.

Newfoundland in 1966 introduced a program called the Parents' Supplement (Schooling Allowance), under which payments are made for children attending school (see p. 317).

Subsection 4.—Youth Allowances

Legislation providing for a program of youth allowances became effective Sept. 1, 1964. The Federal Government does not provide youth allowances in Quebec, which has had its own program, called Schooling Allowances, since 1961. With the introduction of the federal scheme in 1964, the Province of Quebec agreed to make certain changes in its schooling allowances program so that it would be comparable with the federal measure. Since then, that province has been compensated by a tax abatement adjusted to equal the amount that the Federal Government would otherwise have paid in allowances to Quebec residents. The federal youth allowances and the Quebec schooling allowances programs cover all eligible young people in Canada.

Under the federal program, monthly allowances of \$10 are payable in respect of all dependent children aged 16 and 17 who are receiving full-time educational training or are precluded from doing so by reason of physical or mental infirmity. Both the parent or guardian and the child must normally be physically present and living in a province other than Quebec. The allowance is not payable to a parent who resides in Quebec or outside Canada, regardless of where his child may be attending school. However, a child may attend school in Quebec or outside Canada, or, if disabled, receive care or training in Quebec or outside Canada and still be considered eligible, on the basis that he is a resident of a province other than Quebec but is temporarily absent.

Allowances normally commence with the month following that in which family allowances cease and continue until the school year terminates. They are paid retroactively for the summer months when the child returns to school at the commencement of the new school year, although allowances for a disabled child not attending school are payable continuously throughout the year. Should a student leave school, leave the country permanently, cease to be maintained, take up residence in Quebec, or die, the allowance ceases. Otherwise, the youth allowance continues until the end of the month in which the young person reaches age 18. Youth allowances are considered not to be income for any purpose of the Income Tax Act.

The program is administered by the Department of National Health and Welfare. The National Director of the family allowances and old age security programs is also responsible for administering youth allowances, assisted by regional directors located in each of the provincial capitals other than Quebec City. The costs of youth allowances are met from the Consolidated Revenue Fund.

Section 2.—Federal-Provincial Programs

Subsection 1.—Canada Assistance Plan

The Canada Assistance Plan was enacted in 1966 as a comprehensive public assistance measure to complement other income security measures. It provides, under agreements with the provinces, federal contributions of 50 p.c. of the costs of assistance to persons in need and of the costs of certain welfare services. The Plan is designed to replace the Unemployment Assistance Act, 1956, although the latter will continue in effect in some provinces for an interim period with respect to certain programs that utilize a means test and are not covered under the Canada Assistance Plan. All provinces had signed agreements under the Plan by the end of August 1967. The arrangements for contracting out of certain shared-cost programs that were introduced in 1965 under the Established Programs (Interim Arrangements) Act are applied to Quebec's agreement. It is provided that the provinces may discontinue their programs of old age assistance, blind persons allowances and disabled persons allowances and instead give aid under their general programs with costs shared under the Plan. By mid-1968, five provinces had taken advantage of this provision and had discontinued receipt of applications under the old age assistance and disabled persons allowances programs; three of these had also discontinued receipt of applications under the blind persons allowances program.

The Plan extends federal sharing to include the following costs, which were not shared under the Unemployment Assistance Act: assistance to needy mothers with dependent children, maintenance of children in the care of provincially approved child welfare agencies, health care services to needy persons, and the extension of welfare services to prevent or remove causes of dependency or to assist recipients in achieving self-support. The only eligibility requirement specified is that of need, which is determined through an assessment of budgetary requirements as well as of income and resources. A province must not require previous residence as a condition of eligibility for assistance or for continued assistance;

rates of assistance and eligibility requirements are set by the province so that they may be adjusted to local conditions and the needs of special groups; and the provinces must establish procedures for appeal from decisions that relate to the provision of assistance.

The Federal Government reimburses the provinces for 50 p.c. of the cost of assistance provided to persons in need and for 50 p.c. of certain costs of improving or extending welfare services. "Assistance" includes any form of aid to or on behalf of persons in need for the purpose of providing basic requirements such as food, shelter and clothing; items necessary for the safety, well-being or rehabilitation of a person in need, or for a handicapped person; special home care such as a home for the aged, a nursing home or a welfare institution for children; travel and transportation; funerals and burials; health care services; welfare services purchased by or at the request of provincially approved agencies; and comfort allowances for inmates of institutions.

The cost of improving and extending welfare services may be calculated either (1) as the amount by which the cost of providing welfare services exceeds that of the period from Apr. 1, 1964 to Mar. 31, 1965 or (2) as the cost of employing persons who are engaged wholly or mainly in the performance of welfare service functions and who are employed in positions filled after Mar. 31, 1965. Included for sharable purposes are the costs of salaries and employee benefits, travel, research, consultation, fees for conferences and seminars, and certain costs of staff training. The sharing of cost of work activity projects that prepare persons for employment and the extension of provincial welfare services to Indians on reserves, on Crown lands or in unorganized territory are governed by special agreements.

4.—Federal Share of Canada Assistance Plan Costs, by Province, Year Ended Mar. 31, 1968

NOTE.—Includes costs of public assistance payments, child welfare maintenance, health care and extensions and improvements in welfare services and also payments made for claims received in 1967-68 covering expenditures made in 1966-67.

Province	Amount	Province	Amount
	\$		\$
Newfoundland.....	17,901,873	Manitoba.....	15,571,938
Prince Edward Island.....	1,738,858	Saskatchewan.....	13,403,926
Nova Scotia.....	10,263,995	Alberta.....	26,538,313

Quebec.....	1		
Ontario.....	100,287,774	Totals.....	225,611,407

¹ Payments to Quebec are made by the Department of Finance under the terms of the Established Programs (Interim Arrangements) Act under which compensation is provided in the form of a tax abatement and equalization payment.

Subsection 2.—Unemployment Assistance

Under the Unemployment Assistance Act 1956, as amended, the Federal Government was authorized to enter into an agreement with any province to reimburse it for 50 p.c. of the unemployment assistance expenditures made by the province and its municipalities to persons and their dependants who are unemployed and in need. Payments to both employable and unemployable persons are sharable, as are the costs of maintaining persons in homes for special care, and the costs of supplementary aid to recipients of old age security pensions, old age assistance, blind persons allowances, disabled persons allowances and unemployment insurance benefits where the amount of assistance is determined on the basis of need. Federal sharing was extended to mothers' allowances from Apr. 1, 1966. Effective from Apr. 1, 1965, Quebec received partial payment for assistance costs under the Established Programs (Interim Arrangements) Act under which the province is entitled to compensation in the form of a tax abatement and an equalization payment.

All programs under which aid is based on a needs test are included for reimbursement under the Canada Assistance Plan under which all provinces had signed agreements by August 1967. The Unemployment Assistance Act, however, remains in effect in the Yukon

and Northwest Territories and for a transitional period in some provinces to cover the costs of aid to residual groups of persons under certain means-test programs during the process of conversion to needs-test programs (see p. 310). The federal share of unemployment assistance costs for the year ended Mar. 31, 1967, amounted to \$141,633,582. In the following fiscal year the federal share was reduced to \$26,000,000 as claims under the Canada Assistance Plan became effective.

Subsection 3.—Old Age Assistance and Blind and Disabled Persons Allowances

Federal reimbursement to the provinces for assistance to persons aged 65 or over, to blind persons aged 18 or over and to persons permanently and totally disabled aged 18 or over are provided for under the Old Age Assistance Act of 1951, as amended, the Blind Persons Allowances Act, 1951, as amended, and the Disabled Persons Allowances Act, 1954, as amended. To be eligible for an allowance under any of these Acts, an applicant must meet the 10-year residence requirement and the income requirements. Under the Old Age Assistance Act and the Disabled Persons Allowances Act the total income, including the allowance, may not exceed \$1,260 a year for an unmarried person, \$2,220 a year for a married couple or \$2,580 a year for a married couple when the spouse is blind within the meaning of the Blind Persons Act. Under the latter Act total income, including the allowance, may not exceed \$1,500 a year for an unmarried person, \$1,980 a year for a person with no spouse but with one or more dependent children, \$2,580 for a married couple and \$2,700 a year for a married couple when the spouse is also blind.

A recipient of old age assistance is transferred to old age security on reaching the eligible age for it, which in 1968 was 67 years (see p. 306). This program will disappear when the eligible age for old age security is lowered to 65 years.

The federal contribution may not exceed 50 p.c. of \$75 a month or the allowance paid, whichever is less, for the old age assistance and disabled persons allowances, or 75 p.c. of \$75 a month of the allowance paid, whichever is less, for blind persons allowances.

Effective Apr. 1, 1965, Quebec withdrew from these federal-provincial programs under the terms of the Established Programs (Interim Arrangements) Act, which entitles the province to a tax abatement and an equalization payment.

5.—Statistics of Old Age Assistance and Blind and Disabled Persons Allowances, by Province, Year Ended Mar. 31, 1968 with Totals for 1966-68

¹ Most recipients transferred to provincial social assistance program.

Under the terms of the Canada Assistance Plan a province may elect to aid needy persons of age 65 or over, the blind or disabled under a general assistance program with costs shared under the Canada Assistance Plan (see p. 310). In accordance with this provision a number of provinces no longer accept applications under these programs. They may also transfer current recipients to their general programs provided there is no decrease in benefits. By mid-1968, Ontario, Saskatchewan and Alberta had discontinued applications under the three programs, and Newfoundland and Prince Edward Island had discontinued receipt of applications for old age assistance and disabled persons allowances.

Subsection 4.—Fitness and Amateur Sport Program

The Fitness and Amateur Sport Act of 1961 provides up to \$5,000,000 a year to be spent on the encouragement, promotion and development of active leisure pursuits for everyone in Canada. Although the federal, provincial and municipal governments provide the funds and resources, the programs are carried out almost entirely by non-governmental agencies. Under the Act, Canadian participation in active recreation and amateur sport can be promoted internationally, nationally, provincially and locally through financial assistance, technical guidance, the provision of teaching materials, assistance to training, research and the construction of facilities. The National Advisory Council of Fitness and Amateur Sport advises the Minister of National Health and Welfare in fitness and amateur sport matters; its 30 members are chosen for their interest and experience, with at least one member from each province.

The federal program has five elements. *Grants to National Organizations*, totalling more than \$1,000,000 a year, go to some 50 national fitness and sports organizations to help to train coaches, to improve standards of instruction, to increase participation in sports, to aid the holding of national and regional competitions and to assist Canadian athletic teams at international competitions. *Grants for Athletic Events* assist in the holding of sports events of nation-wide interest. *Grants for Training and Research* are made for graduate study in fitness and amateur sport, for research fellowships, and for scholarships and bursaries for undergraduate study in physical education and recreation. *Services of the Department of National Health and Welfare* include the provision of technical advice, training material and promotional aids. Committees of the National Advisory Council meet frequently with the executives of sports organizations to discuss policy and a federal-provincial committee of government officials advises on and co-ordinates governmental aspects of the program. The Department also co-ordinates work done by other federal agencies in fitness and amateur sport. *Grants to the Provinces* of \$1,000,000 a year are made to those that enter into cost-sharing agreements for provincial programs of fitness and amateur sport. The Federal Government meets 60 p.c. of the cost of projects and the full cost of the undergraduate scholarships and bursaries. Applications for all grants at the provincial or local level are made in the first instance to the responsible provincial department. Most of the ideas for recreational activities and plans originate in the municipal recreation departments where the needs of the individual communities are best known.

Subsection 5.—National Welfare Grant Program

The National Welfare Grant Program was established in 1962 to help develop and strengthen welfare services in Canada through a general welfare and professional training grant and a welfare research grant. The variety of provisions within the program, along with its associated consultative services, allow it to operate as a flexible instrument in the development of welfare services and to give a major emphasis to experimental activities in the welfare field.

The allotment for the year ended Mar. 31, 1969 was \$2,450,000. Provincial governments, municipal welfare departments, non-governmental welfare and correctional agencies, universities and individuals may be the ultimate recipients of project grants under one or

more provisions of the program. Some are financed and administered entirely by the Federal Government; others require application through a provincial department of welfare that actually administers the award on a shared-cost basis.

General welfare, bursary, training and staff development grants are available to provinces on a shared-cost basis for projects designed to improve welfare administration, to develop provincial consultative and co-ordinating services, and to strengthen and extend public and voluntary welfare services; for bursaries for full-time graduate training at Canadian schools of social work; and for staff training and development grants for employees of government and voluntary welfare agencies where the costs are not sharable under the Canada Assistance Plan. The other provisions of the program are administered by the Federal Government. Welfare scholarships are awarded for graduate study in Canadian schools of social work and fellowships for advanced study at Canadian and foreign universities. Teaching and field instruction grants assist with the development of new Canadian schools of social work and with certain operating costs at existing schools.

Under the welfare research grant, funds are provided for a variety of research projects undertaken by public and voluntary welfare and correctional agencies, universities and research institutions. Grants are available to national voluntary welfare agencies to assist with projects not eligible for support under other provisions of the program.

Effective Apr. 1, 1967, a mental retardation grant was established for a five-year period and is being administered in conjunction with the National Welfare Grant Program. It supports research and demonstration projects designed to expand knowledge and to apply that knowledge to the provision of services and to preventive programs in that field.

Expenditures under the National Welfare Grant Program for the year ended Mar. 31, 1968 totalled \$1,886,730 and under the Mental Retardation Grant, \$133,407. Of the former, \$328,314 was expended on research projects; \$610,404 on teaching and field instruction, welfare scholarships and fellowships; \$237,114 on national agency projects; and \$710,898 on welfare demonstration and general welfare projects, including provincially administered bursary and staff development programs.

Subsection 6.—Vocational Rehabilitation

The federal-provincial vocational rehabilitation program, which began in 1952, was consolidated and extended under the Vocational Rehabilitation of Disabled Persons Act, 1961. Agreements under this Act provide for equal sharing of costs between the Federal Government and the provinces. These costs include co-ordination and provision of services to disabled or other vocationally disadvantaged individuals, training of rehabilitative personnel, and research and publicity. Approved services supplied by a provincial government or purchased from voluntary agencies by a provincial government include medical, social and vocational assessment, intensive counselling, restorative services, the provision of prostheses, vocational or educational up-grading, rehabilitation allowances, work conditioning, and provision of tools, books and other equipment. Employment counselling and placement are provided through the Canada Manpower Centres of the Department of Manpower and Immigration.

In each participating province a provincial co-ordinator or director of rehabilitation is responsible for the co-ordination and administration of services to disabled or vocationally disadvantaged persons. The federal aspects of the program are administered by the Manpower Utilization Branch of the Department of Manpower and Immigration in co-operation with the Department's five regional offices. The Manpower Utilization Branch, through its section on Older Workers, also has the function of encouraging a more favourable employment climate for older workers through a continuing educational program, encouragement of research, maintenance of liaison with management, labour and voluntary agencies, assembly and dissemination of informational material, and supportive services to the Canada Manpower Centres. Among other agencies contributing to vocational rehabilitation are the Workmen's Compensation Boards in all provinces, which provide for the rehabilitation of injured workmen.

In the year ended Mar. 31, 1968, federal expenditures under the vocational rehabilitation program totalled \$2,157,894. Reports were received on 2,995 disabled or vocationally disadvantaged persons rehabilitated to employment during the year. Before rehabilitation the cost of supporting these people and their dependants was an estimated \$3,200,000 annually; after rehabilitation their estimated annual earnings were \$8,600,000.

Section 3.—Provincial Welfare Programs

Major welfare programs governed by provincial legislation include social assistance and social allowances, mothers' allowances, services for the aged, and child welfare services. Also, the Province of Quebec operates the Quebec Pension Plan, which is comparable to the Canada Pension Plan (see p. 303), and has also enacted in 1967 its own family allowances program (see p. 317). In most provinces, responsibility for a number of the programs is shared by the provinces and their municipalities. Provincial administration is carried out through the department of public welfare in each province; several departments have established regional offices to facilitate administration and to provide consultative services to the municipalities.

The provincial departments of public welfare are placing increasing emphasis on standards of administration and on rehabilitative services for social assistance recipients, and now share with the municipalities the costs of preventive and rehabilitative welfare services.

Public services are supplemented by those of voluntary agencies whose interests include the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may receive public grants, depending on the nature and standard of their services, although their main support is usually from united funds or community chests, or from sponsoring organizations.

Subsection 1.—Social Assistance

All provinces make legislative provision for assistance to persons in need and their dependants. With the exception of Quebec, all provinces have now incorporated provisions for allowances to needy mothers with dependent children in a broadened program of provincial allowances to several categories of persons with long-term need or in a general program under which the only eligibility requirement is need, irrespective of the cause of need.

In addition to allowances to cover items of basic need, such as food, clothing, shelter, fuel and utilities, all provinces make provision for such special items as rehabilitation services, expenses incidental to education or obtaining employment, counselling, homemakers services and institutional care. The provinces are reimbursed by the Federal Government under the Canada Assistance Plan for 50 p.c. of the costs of assistance and of certain welfare services given by the provincial and municipal authorities (see p. 311). The provincial departments of public welfare set rates of assistance and conditions of eligibility; they have regulatory and supervisory powers over municipal administration of assistance, and require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but in four provinces municipal residence determines the financially responsible authority. The provincial authority takes responsibility for aid in unorganized areas within the province and for persons who lack municipal residence.

The administration of assistance varies. In five provinces allowances to persons with long-term need, such as needy mothers with dependent children, disabled persons and the aged, are administered by the province and other allowances are administered by the municipalities. In Newfoundland and New Brunswick all assistance is administered by the provincial authority. In Prince Edward Island assistance is administered by the province and two of the larger municipalities. In Saskatchewan and British Columbia compre-

hensive programs of general assistance are administered by the local authority, i.e., by the municipalities except in sparsely populated municipalities and in areas without municipal organization where aid is administered by the province. British Columbia also administers a program of supplementary allowances to needy recipients of Old Age Security pensions and the three federal-provincial categorical allowances. In the eight provinces where the municipalities have some administrative responsibility, the proportion of the costs of aid borne by the province varies from 40 p.c. to 100 p.c.

Subsection 2.—Living Accommodation for Elderly Persons

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. These homes are required to meet standards set out in provincial legislation relating to homes for the aged, welfare institutions or public health. Voluntary homes are usually provincially inspected and in some provinces must be licensed.

All provinces in varying degrees make capital grants toward the construction or renovation of homes for the aged by municipalities or voluntary organizations; and, generally speaking, such homes are exempt from municipal taxation. Some provinces also make provision for capital grants to municipalities, charitable organizations or non-profit corporations for the construction of low-rental housing for elderly persons. These projects are usually built under Sect. 16 of the National Housing Act, which provides for long-term low-interest loans to non-profit corporations constructing low-rental self-contained or hostel accommodation for older people. Units for the aged may also be included in low-rental public housing projects for families, built under Sect. 35 of the Act. One province pays annual maintenance grants in respect to each self-contained housing unit and for each bed in an approved special-care home operated under municipal, charitable, or non-profit corporation auspices.

In some provinces efforts are made to place well, elderly people in small proprietary boarding homes. Those who are chronically ill may be cared for in chronic or convalescent hospitals, private or public nursing homes and some homes for the aged. All provinces contribute to the maintenance of needy persons in homes for the aged or other homes for special care, and these costs are shared by the Federal Government under the Canada Assistance Plan (see pp. 310-311).

Subsection 3.—Child Welfare Services

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation. The program may be administered by the provincial authority or the responsibility may be delegated to local children's aid societies (voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments). In Newfoundland, Prince Edward Island, New Brunswick, Saskatchewan and Alberta, child welfare services are administered by the province; in Quebec they are administered by recognized voluntary agencies and institutions, religious and secular; in Ontario, a network of local children's aid societies is responsible for the services; in Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province elsewhere.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. The costs of certain services and maintenance costs for children in care of a voluntary or public agency, formerly borne by the province or partly by the municipality of residence and partly by the province, are sharable with the Federal Government under the Canada Assistance Plan (pp. 310-311).

Child welfare agencies, provincial or voluntary, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a

judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proved, the court may direct that the child be returned to his parent or parents under supervision, or be made a ward of the province or a children's aid society. Services are provided as appropriate and include services to children in their own homes, care in foster boarding homes or adoption homes or, for children who need it, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 16,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may need preparation for placement in foster homes, and emphasis is increasingly being placed on group-living homes. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation and by provincial or municipal public health regulations; they are generally subject to inspection and in some provinces to licensing.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres. These are chiefly under voluntary auspices, except in Ontario, where there are also municipally sponsored day nurseries operated with the aid of provincial grants.

Subsection 4.—Newfoundland's Schooling Allowances Program

The Province of Newfoundland introduced its Parents' Supplement (Schooling Allowance) program in 1966. Under this scheme, an annual benefit of \$15 is paid in semi-annual instalments for each eligible child who is registered at and attending a school other than a trade school or university. There is no age limit specified in the legislation but the allowance terminates when the child leaves school.

Subsection 5.—Quebec's Family Allowances Program

The Province of Quebec introduced its own family allowances program under legislation enacted in 1967. Under this plan, the following allowances are paid at the end of each six-month period to persons satisfying the relationship and residence requirements in respect of children under 16 years of age: \$15 for one child, \$32.50 for two children, \$52.50 for three children, \$77.50 for four, \$107.50 for five, \$142.50 for six, and an extra \$35 for each child after the sixth. These allowances are increased by \$5 for each child between the ages of 12 and 16 years. To qualify for the allowances, children must be attending school regularly from the time when they are first required to do so, unless prevented by physical or mental infirmity. These allowances supplement those paid under the federal scheme.

Section 4.—Emergency Welfare Services

The function of the Emergency Welfare Services Division of the Department of National Health and Welfare is to develop community capability to provide, in the event of a national emergency, essential welfare services not available through established welfare agencies. A 1959 Order in Council set up five emergency welfare services—emergency clothing, emergency feeding, emergency lodging, registration and inquiry, and personal

services—and gave the Division responsibility for the continuation of welfare departments in support of rehabilitation and recovery. To these ends, policy has been defined, systems designed and, at all levels of government, welfare resources planned.

In peacetime, trained specialists within the federal, provincial and municipal departments of welfare, organized nationally, are responsible for developing an emergency welfare capability. The program is an integral part of the Canada Survival Plan and is co-ordinated with the programs of other Canadian Government agencies and with mutual support programs of the Welfare Administration of the United States Department of Health, Education and Welfare. Leaders are being trained in the art of organizing large numbers of volunteers for emergency welfare operations and a public education program is being maintained. Special printed forms and equipment for survival, not regularly available through commercial sources, have been produced and are located strategically across Canada.

Section 5.—International Welfare*

Canada is actively involved in the social welfare and social development activities of the United Nations and its specialized agencies and of various international voluntary organizations. At the United Nations, Canada is represented on the Commission for Social Development, is a member of the governing bodies of the United Nations Children's Fund (UNICEF) and the International Labour Organization, and actively participates in the work of a number of related organizations such as the Society for International Development, the International Council on Social Welfare, and the International Social Security Association. The Department of National Health and Welfare provides representatives to such organizations, participates in international studies, and contributes to the development of Canadian policy in this sector.

Under the program of the Canadian International Development Agency, Canada supports a number of social welfare projects in developing regions and provides social work and social welfare training for foreign students recommended by their governments. The necessary technical services to the bilateral and multilateral aid programs in this sector are supplied by the Department of National Health and Welfare, which works closely with several Canadian voluntary organizations engaged in social development. Canada also has reciprocal agreements on social security programs with a number of countries. The Departments of External Affairs, of National Health and Welfare and of Finance are the federal agencies normally engaged in the negotiation of these agreements.

PART III.—HEALTH AND SOCIAL WELFARE EXPENDITURES

Section 1.—Government Expenditures on Health and Social Welfare

In the seven years ended Mar. 31, 1968, expenditures by all levels of government on health and social welfare rose from \$3,689,200,000 to an estimated high of \$6,553,100,000, an increase of over 75 p.c. If these figures are adjusted to take account of the growth in population, the increase in per capita expenditures—from \$201 to \$321—was about 60 p.c. Government expenditures may also be measured in relation to major economic indicators; on this basis, annual government expenditures on health and social welfare over the 1962-68 period remained relatively stable, fluctuating between 11.8 p.c. and 13.9 p.c. of net national income and between 8.8 p.c. and 10.4 p.c. of gross national product; for the year ended Mar. 31, 1968, the values are estimated to be 13.9 p.c. and 10.4 p.c., respectively, the highest proportions ever reached in recent history.

The federal share of health and social welfare expenditures fell from 69.9 p.c. in 1961-62 to 60.8 p.c. in 1967-68, the provincial share rose from 27.2 p.c. to 37.0 p.c. and municipal outlays declined from 2.9 p.c. to 2.2 p.c. Compared with the previous year, 1966-67,

* See also pp. 135-141.

health and social welfare expenditures by all levels of government increased by \$1,177,500,000 or 22 p.c. In the federal field the increase amounted to 23 p.c. and showed the greatest gain. The main items causing this rise included higher disbursements under the Old Age Security program principally because of the lowering of the eligible age, the commencement of the Guaranteed Income Supplement program effective Jan. 1, 1967, the greater expenditure incurred by the introduction of the Canada Assistance Plan which is wider in scope than the categorical programs it is intended to replace, higher expenditures under the Unemployment Insurance Act, greater outlays on behalf of health and welfare for the Indian and Eskimo populations, increasing expenditures under the Hospital Insurance and Diagnostic Services Act, and contributions to the provinces under the Health and Hospital Construction Grants and the new Health Resources Fund Act. Provincial expenditures rose by 21 p.c. and those of municipal governments by 8 p.c.

The relative federal declines compared to provincial gains in each of the three years up to 1966-67 were caused to a substantial degree by increasing hospital expenditures by the provincial governments, augmented by the effect of the 'opting out' arrangements made available to the provinces: under the Established Programs (Interim Arrangements) Act, a province may opt out of federal-provincial programs, operate and finance these as provincial schemes and receive contributions from the Federal Government in the form of a tax abatement and an equalization payment in lieu of a direct federal contribution to the program. The opting-out arrangements have the effect of showing an increase in provincial government expenditures while the federal fiscal payment is treated not as an expenditure but as a transfer payment. Thus, provincial expenditures include gross outlays by Quebec whereas the federal expenditures on health and social welfare do not include the large sums

paid or transferred to that province under the Established Programs (Interim Arrangements) Act and other fiscal arrangements. However, the downward trend in Federal Government expenditures on social security was reversed in 1967-68 and showed the greatest gain of all levels of government over the previous year.

The proportion of government expenditures on health and social welfare taken up by health programs continues to grow; in 1961-62 such programs accounted for \$1,126,000,000 or 30 p.c. of the total and in 1967-68 for \$2,454,500,000 or 37 p.c. An outline of the principal components for 1967-68 shows the magnitude of the major programs and services—Family Allowances payments amounted to \$559,000,000, Old Age Security payments to \$1,153,000,000 plus another \$235,000,000 under the Guaranteed Income Supplement program, Unemployment Insurance benefits to \$389,000,000, and veterans pensions and allowances to \$206,000,000 and \$105,000,000, respectively. These income-maintenance programs were entirely the responsibility of the Federal Government. In addition, payments under the Youth Allowances program, which commenced in September 1964, amounted to \$49,000,000, excluding the Province of Quebec. That province had instituted a program of schooling allowances three years prior to the introduction of the federal

EXPENDITURE ON HEALTH AND SOCIAL WELFARE BY ALL LEVELS OF GOVERNMENT WITH PERCENTAGES OF TOTAL GOVERNMENT EXPENDITURE, NET NATIONAL INCOME AND GROSS NATIONAL PRODUCT, YEARS ENDED MAR. 31, 1955-68

program and this necessitated a special arrangement whereby Quebec continued its program but with appropriate fiscal arrangements with the Federal Government. In 1967-68, Quebec inaugurated its own family allowances program (see p. 317).

Federal-provincial income-maintenance programs in 1967-68 required expenditures of \$36,000,000 for old age assistance, \$5,000,000 for blindness allowances, \$31,000,000 for disabled persons allowances and \$41,000,000 for unemployment assistance, the latter including some municipal expenditures. In 1965 Quebec withdrew from these federal-provincial programs under the Established Programs (Interim Arrangements) Act, which entitled that province to a tax abatement as an equalization payment. Canada Assistance Plan expenditures in 1967-68 were estimated to be \$690,000,000 (this program was designed to replace the Unemployment Assistance Act, old age assistance, blind persons allowances and disabled persons allowances programs at the option of each province, as described on pp. 310-311). Workmen's Compensation Boards spent an estimated \$175,000,000 on cash benefits for pensions and compensation. Welfare services for Indians and for veterans and the national employment service accounted for approximately \$93,000,000 at the federal level.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled almost \$470,000,000 and grants for hospital construction and general health grants to the provinces and municipalities amounted to \$46,000,000. The Federal Government spent \$40,000,000 on its Indian and northern health services and \$63,000,000 on hospital and treatment services for veterans. Provincial expenditures on hospital care were estimated at \$1,300,000,000 and expenditures on other health services at \$300,000,000. Workmen's Compensation Boards paid an estimated \$75,000,000 for medical aid and hospitalization, and municipal governments spent \$75,000,000 on health.

¹ Estimated

Section 2.—Expenditures on Personal Health Care

Expenditures on personal health care comprise expenditures of hospitals, earnings of physicians and dentists for professional services to their patients, the value of prescription sales through retail pharmacies, and an estimate of the amounts that private nurses, chiropractors, osteopaths and optometrists receive for their professional services; they exclude expenditures on public health, capital costs (buildings and interest) and administration costs of public-health programs and of insurance plans.

Table 2 shows the components for each year from 1957 to 1966. Canadians spent a total of \$2,815,500,000 on personal health care in 1966, almost three times as much as in 1957. Expressed as a proportion of the gross national product, personal health care expenditures rose from 3.4 p.c. in 1957 to 4.8 p.c. in 1966. Expenditure per person over the same period changed from \$66.24 in 1957 to \$140.64 in 1966. Expressed in constant dollars, according to the consumer price index, the expenditure per person increased by 63 p.c. over the same period, or by an average of 5.6 p.c. a year.

PART IV.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education, supplementing the services of the federal and provincial authorities in many fields and playing a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them. The functions of twenty important voluntary agencies are described in the 1962 Year Book at pp. 270-274.

Voluntary Medical Insurance.—About 11,980,000 Canadians, or 60 p.c. of the population of Canada, had voluntarily secured some protection against the costs of physicians' services at the end of 1966. This protection was provided by 60 non-profit plans with an enrolment of 6,610,000, and by 80 private companies giving coverage to an estimated 5,380,000 persons. The total was 5,760,000 above the 1955 figure, which represented only 39 p.c. of the population.

The non-profit plans took in about \$221,300,000 in premiums and \$6,400,000 in other revenue in 1966, paid out \$199,800,000 in benefits and \$15,000,000 for administration, and were left with a surplus of approximately \$12,800,000. Thus, for every dollar of premiums, 90 cents were paid out in benefits, which amounted to approximately \$30.23 per person covered. In 1955, benefit payments had been \$41,400,000, representing 89 cents of the premium dollar and amounting to \$13.17 per person.

Profit-making private companies collected \$167,200,000 in premiums for health protection in 1966; they paid out \$132,300,000 in claims.

PART V.—UNIFORM LEGISLATION GOVERNING PRIVATE PENSION PLANS

The enactment of the Canada and Quebec Pension Plans emphasized the need for uniform private pension legislation across Canada. Ontario amended the Ontario Pension Benefits Act with effect from July 30, 1965, and Quebec enacted the Supplemental Pension Plans Act with effect from July 15, 1965. The Pension Benefits Act of Alberta came into force on Jan. 1, 1967, and that of Saskatchewan was assented to on Apr. 1, 1967. The provincial legislation governs all pension plans operating on and after the effective date in the particular province. Similar legislation at the federal level, the Pension Benefits Standards Act, was assented to on Mar. 23, 1967, and is applicable only to pension plans having members employed in works, undertakings and businesses (generally, banks and interprovincial transportation and communication) that are under federal jurisdiction.

Under these Acts, basic standards have been established with which pension funds or plans organized and administered to provide a pension benefit to employees must comply in order to receive registration, and they are not allowed to operate in these provinces or in the federal areas of responsibility unless they have received registration.

By agreement, each of the provinces mentioned above recognizes similar legislation of the others, so that a pension plan that has been registered and reports in one province does not have to seek registration or duplicate all its reporting procedures in another of these provinces if it extends its operations to employees in that other province.

The legislation requires that an employee's benefits under a pension plan become fully vested (i.e., he has full entitlement to those benefits, which will be paid to him on retirement) when he reaches age 45 and has completed either a minimum of ten years of membership in a pension plan or ten years of service with the one employer. Moreover, should the employee leave his job or resign his membership in the plan prior to retirement, at least 75 p.c. of his total benefits under the plan must be locked-in for purposes of his pension, allowing him to withdraw no more than 25 p.c. of the commuted value of those benefits in a lump sum.

Other provisions of this legislation are intended to ensure the full solvency of these pension plans within a specified period of time, to restrict the types of investments in which the funds of the plan may be invested, to provide that an employee's pension rights are portable if he should change his job, and to establish that each interested party to a pension plan is adequately informed as to the provisions of the plan.

PART VI.—VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation known collectively as the Veterans Charter and also provides administrative facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board,

* Prepared by the Department of Veterans Affairs, Ottawa.

which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary General (Canada) of the Commonwealth War Graves Commission.

The principal benefits now available to veterans are medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for the children of the war dead, veterans insurance, general welfare services, unused re-establishment credit, disability and dependants pensions and war veterans allowances. The work of the Department, except the administration of the Veterans' Land Act, is carried out through 18 district offices and four sub-district offices in Canada and one district office in England; the benefits of the Veterans' Land Act are administered through seven regional offices and 24 district offices across Canada.

Canada's war dead were remembered in 1968 through Government-sponsored commemorative services held in Europe and in Ottawa to mark the 50th Anniversary of the Signing of the Armistice at the conclusion of World War I.

Section 1.—Pensions and Allowances

Disability and Dependants Pensions

Canadian Pension Commission.—The Canadian Pension Commission administers the Pension Act (RSC 1952, c. 207, as amended) and Parts I to X of the Civilian War Pensions and Allowances Act (RSC 1952, c. 51, as amended). The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs. The Commission has district offices in principal cities across Canada with a Senior Pension Medical Examiner in charge.

The Pension Act.—Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics of numbers and liabilities. The Pension Act provides for the payment of pensions in respect of disability or death resulting from injury or disease incurred during or attributable to service with the Canadian Forces or the Naval, Army or Air Forces of Canada in time of war or peace. Provision is also made for supplementing up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or payment of pension at Canadian rates in cases where the claim has been rejected by the government of the country concerned.

Federal legislation assented to Mar. 27, 1968 (SC 1967-68, c. 34) increased the rates of pension payable for disability and death by approximately 15 p.c., retroactive to Jan. 1, 1968. Following are the rates of pension in force under Schedules A and B of the Pension Act from 1919 to 1968.

RATES PER ANNUM FOR 100-P.C. DISABILITY PENSIONERS (SCHEDULE A)—

Jan. 9, 1966.....	1,428	2,100	360	624	216
Jan. 1, 1968.....	1,632	2,400	408	720	240

NOTE.—The rates for orphan children or orphan brothers and sisters are double those shown above. The pensionable children of widows who have been awarded pension are paid at orphan rates. Pensions awarded to parents or brothers and sisters may be less than the amounts shown in accordance with the provisions of the Pension Act.

As will be noted from the above statement, the basic rate of pension for widows (which previously applied to widows of all ranks up to and including that of Colonel) was increased from \$2,100 to \$2,400 a year. This rate being higher than that formerly payable to widows of higher ranks, i.e., \$2,160, the increase had the effect of increasing pensions for the latter and making the rate for widows the same for all ranks. Disability pensions have been payable at the same rate for all ranks since the 1966 increase, so that rank now has a bearing only on parent's pension under Schedule B of the Act. The rate for the dependent parent of a deceased member of the forces who held the rank of Colonel and all ranks below, where there is no widow on pension, was increased from a maximum of \$1,428 to a maximum of \$1,632 a year; where the deceased held a higher rank, the maximum rate remains at \$2,160 a year. Also increased was the maximum rate that may be paid to a dependent parent if there is a widow in receipt of pension—from \$636 to \$732 a year, and the maximum additional amount that may be paid when there are two parents—from \$300 to \$348 a year.

For assessments lower than 100 p.c., the awards under Schedule A are proportionately less. Attendance allowance, which is payable to a pensioner who is totally disabled, helpless and in need of attendance, and which varies from a minimum of \$480 to a maximum of \$3,000 a year depending on the degree of attendance required, is paid in addition to pension. Although a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable.

The Civilian War Pensions and Allowances Act, Parts I to X, provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the war effort during World War II and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.

1.—Pensions in Force under the Pension Act, as at June 30, 1968

War Veterans Allowances and Civilian War Allowances

War Veterans Allowance Board.—The War Veterans Allowance Board is a quasi-judicial body consisting, at present, of nine members appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans Affairs. The Board acts as an appeal court for an applicant or recipient aggrieved by a decision of a District Authority and may, on its own motion, review and alter or reverse any adjudication of a District Authority. The Board is also responsible for instructing and guiding the District Authorities in the interpretation of policy and for advising the Minister with respect to Regulations concerning the administration of the Act.

War Veterans Allowance District Authorities.—In 1950, 18 District Authorities were established in the regional districts of the Department of Veterans Affairs and granted full power to adjudicate on all matters arising under the War Veterans Allowance Act. In 1960, a separate Authority—the Foreign Countries District Authority—was established to look after recipients living outside Canada. The members of a District Authority are employees of the Department of Veterans Affairs appointed by the Minister with the approval of the Governor in Council.

War Veterans Allowances.—The War Veterans Allowance Act, 1952, as amended, provides an allowance to otherwise qualified war veterans who, because of age or infirmity, are no longer able to derive their maintenance from employment and to ensure that their income does not fall below a specified scale. Widows and orphans of qualified veterans are eligible for benefits. Since its inception in 1930, the Act has been amended on 14 different occasions to meet additional needs of veterans and their dependants. The most recent amendment increased monthly rates and annual income ceilings, effective Sept. 1, 1966, to:—

Item	Monthly Rate	Annual Income Ceiling ¹
	\$	\$
Single.....	105	1,740
Married.....	175	2,940
One orphan.....	60	1,008
Two orphans.....	105	1,608
Three or more orphans.....	141	2,016

¹ Where a recipient or spouse is blind, the income ceiling is \$120 higher.

At June 30, 1968, there were 83,496 recipients of War Veterans Allowances, made up of 51,406 veterans, 31,763 widows and 327 orphans; 635 of the total resided outside Canada. The annual liability for all recipients was estimated at \$93,300,000.

Civilian War Pensions and Allowances.—Part XI of the Civilian War Pensions and Allowances Act makes available to certain groups of civilians, their widows and orphans, benefits similar to those available to veterans under the War Veterans Allowance Act. These groups, which performed meritorious service in World War I or World War II, are: Canadian merchant seamen of both Wars; non-Canadians who served in Canadian merchant ships in either War; Canadian voluntary aid detachments of World War I; Canadian firefighters of World War II; Canadian welfare workers of World War II; Canadian transatlantic aircrew of World War II; and Newfoundland Overseas Forestry Unit of World War II.

At June 30, 1968, there were 1,573 civilians, 390 widows and four orphans in receipt of Civilian War Allowances, a total of 1,967 of whom five resided outside Canada. The annual liability was estimated at \$2,800,000.

Veterans' Bureau

The Veterans' Bureau, which is a branch of the Department of Veterans Affairs, assists former members of the Armed Forces and their dependants and former members of the various auxiliary organizations in preparing and presenting claims to the Canadian Pension Commission; it has been in operation for 37 years. The Chief Pensions Advocate, who heads the Bureau at Ottawa, is assisted by pensions advocates, most of whom are lawyers located in the departmental district offices. The pensions advocates appear as counsel for applicants before Appeal Boards of the Commission and, in addition, advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on pension claims. No charge is made for the services of the Bureau.

During 1967, the Veterans' Bureau submitted 6,259 claims to the Canadian Pension Commission for adjudication, of which 37 p.c. were wholly or partially granted. These included 835 claims presented to Appeal Boards of the Commission.

Section 2.—Welfare and Treatment Services

Welfare Services

Welfare services for veterans and, where appropriate, their dependants are provided by the Welfare Services Branch. These include the administration of assigned statutes; the conducting of field work and reporting for other branches of the Department, the Canadian Pension Commission, the War Veterans Allowance Board and Services Benevolent Funds; and the provision of a rehabilitation and welfare program of advice and counselling including referral, where indicated, to other public or private agencies, veterans organizations, etc.

War Service Grants.—War service gratuities payable under the War Service Grants Act to veterans of World War II and the operations to restore peace in Korea are now payable only in cases where delayed application is acceptable. Re-establishment credit payable under the same Act was available up to Oct. 31, 1968. Payment of the credit, except for a balance of \$50 or less, is not made in cash to the veteran but is released on his behalf for specified purposes. Up to Mar. 31, 1968, a total of \$315,609,877 had been paid out and unused balances amounted to \$8,273,747. During the year ended Mar. 31, 1968, \$141,407 was paid out, made up of \$81,723 for purchases of homes and for repairs and furniture; \$15,084 for purchases of businesses, tools and equipment; and \$44,600 for miscellaneous items such as insurance, special equipment for training, clothing, etc.

Assistance Fund.—Recipients of benefits under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act living in Canada may be given help from the Assistance Fund if their total income is lower than the permitted maximum. Assistance may take the form of a monthly supplement based on shelter, fuel, food, clothing, personal care and specified health costs or of a single award to meet an unusual or emergency need. The number of persons assisted during the fiscal year 1967-68 was 18,557, the number in receipt of monthly supplements at the end of the year was 13,471 and Fund expenditures for the year amounted to \$6,452,345; comparable figures for 1966-67 were 20,421, 13,785 and \$5,867,068, respectively.

Education Assistance to Children.—The Children of War Dead (Education Assistance) Act provides help in the form of allowances and the payment of fees for the post-secondary education of children of those whose deaths have been attributed to military service. Assistance is restricted to children attending, in Canada, educational institutions which require secondary school graduation, matriculation or equivalent standing for admission. These include, in addition to universities and colleges, such facilities as hospital schools of teaching and institutes of technology. From its inception in July 1953 to Mar. 31, 1968, expenditures totalled \$7,271,233 of which \$3,901,581 was spent in allowances and \$3,369,652 in fees. By the end of March 1968, 4,486 children of Canada's war dead had

been approved for training. Of these, 1,817 had successfully completed training—253 had obtained degrees in arts and science, 346 in education, 121 in engineering and applied science, 39 in social work, 32 in medicine, 30 in law, 125 in other university faculties, 421 in nursing, 229 in teaching and 221 in administrative and technological fields. At the same date there were 601 university undergraduates and 257 students in non-university courses receiving assistance.

Veterans Insurance.—The Returned Soldiers Insurance Act (SC 1920, c. 54 as amended) provided eligibility to contract for life insurance with the Federal Government up to a maximum of \$5,000 to any one veteran of World War I. No policies were issued after Aug. 31, 1933. There were 48,319 policies issued during the eight years in which the Act was open amounting to \$109,299,500 and, of these, there were 5,635 in force with a value of \$12,149,862 on Dec. 31, 1967.

The Veterans Insurance Act (RSC 1952, c. 279 as amended) enables veterans following their discharge and widows of those who died during World War II service to contract with the Federal Government for a maximum of \$10,000 life insurance. Veterans with active service in Korea were extended eligibility by virtue of the Veterans Benefit Act 1954. The period of eligibility to apply for this insurance ended Oct. 31, 1968. To Dec. 31, 1967, 54,279 policies in the amount of \$177,700,500 had been issued and, of these, 26,303 policies with a value of \$83,989,850 were in force.

Rehabilitation and Welfare.—Welfare officers at Departmental District Offices work closely with other branches of the Department, with other public agencies at all levels and with private agencies and organizations in assisting veterans and their dependants to deal with problems of social adjustment, particularly those associated with physical disabilities or the disabilities of increasing age. The latter occur more frequently, of course, as the age of the veteran population increases. A program of university, vocational, technical and home training, with allowances, is provided for disabled pensioned veterans and vocational rehabilitation is also promoted by training assistance. Correspondence courses purchased from provincial Departments of Education are also made available. Sheltered workshops at Toronto and Montreal and home assembly work in other centres produce poppies and memorial wreaths associated with Remembrance Day observances.

Treatment Services

The Treatment Services Branch of the Department of Veterans Affairs provides medical and dental services for entitled veterans throughout Canada as well as for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned. Prosthetic services are provided to entitled veterans by the Department of National Health and Welfare but paid for by the Department of Veterans Affairs.

The Branch provides examination and treatment to disabled pensioners for their pensionable disabilities, and provides treatment to war veterans allowance recipients (but not to their dependants) and veterans whose service and financial circumstances render them eligible for free treatment or at a cost adjusted to their ability to pay. If a bed is available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of hospitalization. The pensioner receives treatment for his pensionable disabilities regardless of his place of residence but service to other veterans is available in Canada only. Where Departmental facilities are not readily accessible, an eligible veteran may obtain treatment at the expense of the Department in an outside hospital from a doctor of his choice. Domiciliary care may be provided to eligible veterans in Departmental facilities where the need for active or chronic treatment is sufficiently light provided that excess beds are available.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Premiums are paid on behalf of veterans in receipt of war veterans allowance. The Veterans Treatment Regulations

apply in DVA institutions and elsewhere under Departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

Hospital Facilities.—Treatment is provided in 10 active-treatment hospitals located at Halifax, N.S.; Saint John, N.B.; Quebec City, Montreal and Ste. Anne de Bellevue, Que.; London, Ont.; Winnipeg, Man.; Calgary, Alta.; and Vancouver and Victoria, B.C.; and in three domiciliary care homes at Ottawa, Ont.; Saskatoon, Sask.; and Edmonton, Alta. The rated bed capacity of these institutions at June 30, 1968 was 7,010 beds. It should also be noted that in Ottawa both acute and chronic cases that require definitive treatment are admitted to the National Defence Medical Centre. A veterans pavilion of 67 beds is located at St. John's General Hospital, St. John's, Nfld.; 1,200 beds are available at Sunnybrook Hospital in Toronto for the priority use of veterans and 565 in community hospitals located in St. John's, Nfld.; Charlottetown, P.E.I.; Kingston and Port Arthur, Ont.; Regina and Saskatoon, Sask.; and Edmonton, Alta.

Medical Staff and Training Programs.—Many of the professional staffs of Departmental active-treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staffs are engaged in teaching and private practice and hold appointments on the medical faculties of the various universities. In the active-treatment institutions, medical teaching programs are maintained. All active-treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are also approved for advanced postgraduate training in various other specialties. An extensive resident program is in effect in the medical specialties as well as in other fields such as physiotherapy, occupational therapy, dietary, psychology and medical social services. A school for the training of nursing assistants, operated at Camp Hill Hospital in Halifax, has an annual capacity of 70. Postgraduate and continuing education in pharmacy is conducted at Westminster Hospital, London, Ont.

Clinical Research Program.—During 1967, there were 56 projects in progress under the clinical research program. This program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained clinical investigation units are established in active-treatment hospitals located at Montreal, London, Winnipeg and Vancouver.

Section 3.—Land Settlement and House Construction

The Veterans' Land Act, 1942, as amended, provides financial, technical and supervisory assistance to World War II and Korean Force veterans, to enable them to engage in agriculture or commercial fishing on a full-time or part-time basis; to acquire, build or improve homes; and to settle on provincial, federal and Indian reserve land. Loans may be made of up to \$40,000 for full-time farmers on economic farm units, to \$18,000 for small family farmers, to \$16,000 for small holders (part-time farmers) and to \$18,000 for veterans building houses on city-size lots. The financial assistance available under the Act is generally comparable to that available to non-veterans under the Farm Credit Act and the National Housing Act.

From inception of the Act to Dec. 31, 1967, 110,824 veterans were settled under the provisions of the Act: 31,001 were established as full-time farmers, 66,867 as small holders, 5,618 as Crown land settlers, 1,369 as commercial fishermen, 1,681 Indian veterans were established on reservations and 4,288 veterans acted as their own contractors in building homes on city-size lots. Subsequent to settlement, 15,637 farmers and 11,744 small holders and commercial fishermen were given additional financial assistance. In 1967, loans amounting to over \$95,700,000 were approved on behalf of 9,557 veterans. Since

inception of operations to the end of 1967, about \$863,000,000 was spent on repayable loans, advances and non-repayable grants and nearly 59,000 veterans had earned conditional grants of \$106,000,000. By the end of that year, 35,398 of them had successfully completed their settlement contracts—12,768 farmers, 16,296 small holders, 500 commercial fishermen, 4,378 Crown land settlers, and 1,456 Indian veterans on reservations.

Field Officers highly trained in the techniques pertaining to agriculture, construction and land appraisals provide advisory, supervisory and appraisal field services. During 1967, 8,270 properties were appraised exclusive of 102 appraisal assignments carried out on behalf of other government departments and agencies. Altogether, 1,320 new houses were started—1,120 for small holders and commercial fishermen, 160 farm homes and 40 on city-size lots—and 1,229 new houses were completed. Four construction schools were organized, attended by 188 veterans.

During 1967, instalments falling due on properties purchased by veterans under the Act amounted to \$25,500,000, excluding share-of-crop payments; over 96 p.c. of the total amount due was collected and 1,221 veterans under Share-of-Crop Agreements paid almost \$1,200,000.

By Dec. 31, 1967, 11,119 veterans were insured under the Veterans' Land Act Group Life Insurance for almost \$100,000,000. Since inception of the group plan, 86 insured veterans died and \$495,175 was paid to retire their indebtedness.

2.—Summary of Operations Under the Veterans' Land Act, as at Dec. 31, 1967

Item	Full-Time Farming	Small Holding	Commercial Fishing	Provincial Lands	Federal Lands	Indian Reserves	City-Size Lots	Total

¹ Includes 1,196 civilian purchaser accounts.

Section 4.—Commonwealth War Graves Commission

The current Charters of the Commonwealth War Graves Commission consist of two documents—the Original Charter of Incorporation dated May 21, 1917, and the new Supplemental Charter dated June 8, 1964. Under these Charters the Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914, and Aug. 31, 1921, and between Sept. 3, 1939, and Dec. 31, 1947, and with the erection of memorials to commemorate those with no known grave.

The Canadian High Commissioner in London, England, is the official Commission member for Canada, the Minister of Veterans Affairs is the Agent of the Commission in Canada, and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

PART I.—FORMAL EDUCATION*

Section 1.—The Current Education Situation

The Canadian education scene in the late 1960s continues to be dominated by the need for the development of ever greater knowledge, skills, understanding and appreciation among the nation's youth in order to prepare them, individually and as a community, for the challenges they are expected to face in the future. It is widely recognized that this need should be met not only by developing still further the élite at the top of the academic pyramid but also by extending the base to include all young persons, whatever their abilities and aptitudes and whatever their social circumstances and financial resources.

The findings of systematic research as well as the sometimes bitter experiences of schoolmen have brought about an increased realization of the great diversity in aptitude patterns among young people. If all are to be educated so that individual potential may be fully realized, it follows that there must be an equal diversity in the programs of study or training. Facilities for those of academic and scholarly inclination have existed for many years so that recent emphasis has been placed upon the provision of programs suited to those of more practical bent and to the introduction of other measures designed to hold students within the formal education systems to ever-increasing levels of age and attainment. The modern-day labour force has little use for the untrained and poorly educated young person but is greatly in need of qualified tradesmen, technicians and professionals. For this reason there has been an upsurge in the building of vocational and composite schools, the establishment of community colleges and the introduction of policies and practices to cope more adequately with individual differences, such as non-graded systems, subject-promotion schemes and the extension of guidance facilities.

* Revised in the Education Division, Dominion Bureau of Statistics.

Efforts are also being made to overcome the financial barriers to continuing education. The investigations of demographers and sociologists are confirming and quantifying the long-held suspicions that financial constraints are operating to deny education to many Canadians who could profit from it. Various methods are therefore being sought to lighten the financial burden upon the individual and to equalize the rapidly increasing load being carried by the taxpayer. It is now evident that the Federal Government has a key role to play in this matter, particularly in adult technical and vocational training and in university education—both matters of prime concern to the nation as a whole. Acknowledgement of this fact is to be seen in the increasing activities of the federal Department of Manpower and Immigration, the formation of a federal office to deal with higher education, the founding of a nation-wide Service for Admission to Colleges and Universities, the holding of interprovincial Ministers' conferences on education and manpower, and renewed attempts to introduce uniform methods of statistical reporting.

Thus it appears that ethical considerations concerning the duties of society in the satisfaction of the personal needs of the individual and economic considerations concerning the kinds of individuals required to satisfy the manpower needs of society are combining to encourage the extension and equalization of educational opportunity. The rising costs of this endeavour are causing a reappraisal of traditional methods of financing education, tending toward the assumption of increasing proportions of the load by higher levels of government. Taken along with other developments in the economic, social and cultural life of the community, this is resulting in the emergence of the federal authority as an important partner in the task of providing for the education of Canadians.

Section 2.—Administration and Organization of Education

Responsibility for Education in Canada

Canada is a federal state, in which responsibility for the organization and administration of public education is exercised by the provincial governments. The Federal Government is directly concerned only with the provision of education for certain special groups—some 66,200 Indian and 3,600 Eskimo children of school age, other children in the Territories, inmates of federal penitentiaries and families of members of the Armed Forces on military stations (although whenever possible provincial educational facilities are used). In addition, the Federal Government finances vocational training of adults, provides financial support to the provinces amounting to at least 50 p.c. of operating costs of post-secondary education, participates to a considerable extent in informal education and makes grants-in-aid for research personnel and equipment in universities.

Because each of the ten provinces has the authority and responsibility for organizing its education system as it sees fit, organization, policies and practices differ from province to province. Each has a department of education, headed by a minister who is a member of the Cabinet. Ontario has, in addition, a Department of University Affairs under its Minister of Education. Each department is administered by a deputy minister, or director, who is a professional educationist and a public servant. He advises the minister, supervises the department and gives a measure of permanency to its education policy, in general carries out that policy, and is responsible for the enforcement of the Public School Act. The department of education usually also includes: a chief inspector of schools and his staff of local inspectors; directors or supervisors of curricula, technical education, teacher training, home economics, guidance, physical education, audio-visual education, correspondence instruction and adult education; directors or supervisors of other sections (according to the needs of the particular province); and technical personnel and clerks. Quebec operates a dual system, with an associate deputy minister for each of the Roman Catholic and Protestant sectors. In Newfoundland, which has a public denominational system, there is a superintendent for each one of the five denominations recognized by the School Act.

Carleton University campus is attractively situated between the Rideau River and the Rideau Canal which flow through central Ottawa. This institution, established as a college in 1942 and incorporated as a university in 1967, had a full-time student registration of 5,950 and a part-time registration of 4,200 in 1968-69.

Gymnasium at Fraser University, Vancouver, with students writing examinations.

Other provincial departments having some responsibility for operating school programs are: departments of labour, which operate apprenticeship programs; agriculture departments, which operate agriculture schools; departments of the attorney-general or of welfare, which operate reform schools; and departments of lands and forests, which operate forest ranger schools.

From the beginning, each department of education has undertaken, among other things, to provide: (1) inspection services to ensure maintenance of standards; (2) the certification of teachers; (3) courses of study and lists of prescribed or approved textbooks; (4) financial assistance to local authorities in the construction and operation of schools; and (5) regulations for the guidance of trustees and teachers. In return, each department requires regular reports from the schools. When first introduced, government grants to schools were based on such factors as the number of teachers, enrolment, days in session and attendance. Somewhat later, special grants were introduced in most provinces to meet a variety of expenses, such as the construction of the first school, the organizing of special classes, providing transportation for pupils, school lunches and other contingencies. A number of provinces made provision for equalization grants, and now the majority have a foundation program of one kind or another.

The work of the departments of education has grown considerably. Many have expanded their services in the fields of health, audio-visual aids, art, music, agriculture, special education, correspondence courses and prevocational and trade courses. At the same time there has been an increasing delegation of authority to local boards and school staffs. One illustration of this tendency is a reduction in the number of departmental (external) year-end examinations. Few provinces now provide for more than one or two such examinations—at the end of the final and, in some cases, also at the end of the second last year of the secondary school course. Another illustration is the increasing use of lists of approved textbooks from which local authorities may make their own choice, instead of lists of prescribed texts. Courses of study are now seldom planned by only one or two experts in the department; instead they result from conferences and workshops including active teachers and other interested individuals or bodies. In most provinces "curriculum construction" is considered to be a continuous procedure.

Local Units of Administration

In all provinces, school laws provide for the establishment and operation of schools by local education authorities, which operate under the Public School Act and are held responsible to the provincial government and resident ratepayers for the actual operation of the local schools. Through the delegation of authority, education becomes a provincial-local partnership with the degree of decentralization reviewed intermittently. Questions concerning the allocation of responsibilities between the provincial and local authorities will probably occupy the minds of Canadians for decades to come, as well as problems such as the optimum size of administrative units, schools and classes.

At one time, the provincial departments delegated authority to publicly elected or appointed boards, which functioned as corporations under the School Acts and regulations. These three-man boards were expected to establish and maintain a school, select a qualified teacher and prepare a budget for presentation to the municipal authorities. As towns and cities developed, the original boards remained as units but provision was made in the legislation for urban school boards with more members and generally (although not always) with responsibility for both the elementary and secondary schools.

Rural school districts were typically about four miles square, their size determined largely by the need for the school to be within walking distance of the homes it served. As time went by, the realization grew that the manner of living was changing, that farms were becoming much larger and more mechanized, that most farmers had trucks and automobiles, that there were fewer children to the square mile and that it would be more efficient and economical to provide central schools and transportation. There was also considerable discontent among the teachers, as security of tenure was rarely found under

the three-man local school boards. Further, the shortage of teachers, differences among the districts in their ability to pay for education, and a demand for secondary school facilities in rural areas all combined to force the establishment of larger administrative units.

Under provincial legislation, larger units are now in effect in Nova Scotia, New Brunswick, Saskatchewan, Alberta and British Columbia, and their establishment is being encouraged and promoted in Newfoundland, Prince Edward Island and Manitoba. (Newfoundland is a somewhat special case in which the denominational school districts, already rather large geographically, are proceeding toward some kind of amalgamation of Protestant boards.) Ontario has abolished the local school sections in favour of township school areas and is now reorganizing into county units with responsibility for both elementary and secondary education. In Quebec, the greater part of the Protestant system is organized into larger units and the Catholic system has reorganized its administrative structure (for secondary education) into 55 regions.

In some provinces the local boards disappeared when the larger units were formed; in others they were retained with limited powers and duties. The larger unit boards accept responsibility for providing the necessary staff, buildings, equipment and transportation. Where local boards remain, they usually function in an advisory capacity and look after the buildings and grounds.

Elementary and Secondary Education

Enrolment in elementary and secondary schools has been increasing year by year until, in 1968-69, there were 5,499,000 pupils enrolled in public and separate schools, 190,000 in private schools and 214,000 full-time students in various vocational schools and courses, both public and private.

Each September, most Canadian children of age six enter an eight-grade elementary school. At about 14 years of age, nearly 90 p.c. of those who entered grade 1 enter a regular four- or five-year secondary school. From the graduates at this level a limited number—about 13 p.c. of those who began school—go on to college or university where rather more than half of them pursue a three- or four-year program leading to a bachelor degree in arts or science and the remainder enrol in various professional courses such as commerce, education, engineering, law, medicine, theology, etc.

The 8-4 plan leading from grade 1 to university was for many years the basic plan for organizing the curriculum and schools, other than those of Catholic Quebec. This plan, although still followed in some rural, village, town and city schools, has been modified from time to time in various provinces, cities or groups of schools, as it appeared inadequate to meet the demands arising from new aims of education. There are a number of variants to be found at present in Canada: the addition of one or even two kindergarten years at the beginning of the system; the addition of an extra year to high school, providing five rather than four years of secondary schooling; the introduction of junior high schools, changing the organization to a 6-3-3 or 6-3-4 plan; or again, the combining of the first six years of elementary school into two units, each designed to reach certain specified goals during a three-year period. A fairly recent innovation is the establishment of junior colleges, affiliated with universities, in which the last one or two years of high school and the first one or two years of college are offered.

The first secondary schools were predominantly academic and prepared their pupils for entry into university. Until recent years, vocational schools were to be found only in the large cities, although schools in some of the smaller centres did provide a few commercial and technical subjects as options in the academic curriculum. Today, besides commercial and vocational high schools, there are, in increasing number, composite and regional high schools that provide courses in home economics, agriculture, shop-work and commercial subjects as well as in the regular secondary school subjects. The number of subjects offered has also increased greatly and the number of options available, particularly in certain provinces, provides a wide choice for pupils with a great variety of abilities and aims. Three programs can frequently be distinguished—the university entrance course,

the general course for those who wish to complete an academic type of program before entering employment, and vocational courses for those who wish to enter skilled trades. Thus, attention is given to the minority who will go on to institutions of higher learning, while the majority, who will look for jobs, are prepared for entry to their chosen occupation. Considerable emphasis has been placed on music, art, physical education, guidance and group activities but not at the expense of the basic subjects that provide a general foundation.

Eighteen pianos played by 36 young musicians at grade five and six level performed at Piano Festival '68, held in an Ottawa high school, in which 350 students took part. About half of them were children who receive piano instruction in elementary schools.

Development of Education in Quebec

In the past few years, education in Quebec has undergone tremendous change. First of all, education is losing its "confessional" character. Secondly, the trend in this province is to establish a system more like those in other provinces of Canada where there is a single public administrative authority at the provincial level. In accordance with the recommendations of the Royal Commission on Education (begun in 1961 and whose first report was published in 1964), the Quebec Legislature in early 1964 passed a law (Bill 60) setting up a new administrative structure for the school system; the Department of Education replaced the Department of Youth and the Department of Public Instruction.

The change of system required the building of new schools and the acquisition of new teaching materials and additional teaching personnel. As a result, expenditures on education rose from \$218,000,000 in 1965 to a budgetary estimate of \$1,000,000,000 in 1967-68. Many small rural schools were closed and, conversely, a network of 55 regional school boards was created extending over the whole province. Some of the new regional schools are actually "student cities".

Kindergartens, admitting five-year-olds, are now part of the school system and registrations in them have risen from 17,000 in 1962-63 to 77,200 in 1967-68. Instruction, under the direction of skilled personnel, is intended to develop the child's creative imagination, sense of observation, sociability and manual aptitude. No academic subjects are taught at this level.

Elementary education, intended for students aged six to 11, is given in public schools operated under the direction of local school boards. Courses, including languages (French-English), arithmetic, Canadian history, geography, religion, domestic science, manual training, music appreciation, physical culture and drawing, extend over six years instead of seven as in the past. At this level, the new concept of placing the emphasis on the age of the child rather than on the degree of the course is based on the premise that the child should develop in a homogeneous group and age has been selected as the determining factor for such a homogeneous group. Children of the same age are thus brought together at certain times for common activities and at others are separated into average, accelerated or slow courses, according to their own aptitudes.

Secondary schools absorb all children between ages 12 and 16 leaving elementary school. The length of the course has been extended from four to five years, regardless of whether instruction is general or scientific. The trend is toward a composite course with graduated options and promotion by subject matter. In practice, this means that a pupil may be enrolled in grade nine mathematics and in grade 11 French, although the level of separation should never be more than two years. A series of courses (mother tongue and the second language, mathematics, history, etc.) are basic mandatory subjects for all pupils at this level. For additional subjects, the pupils may choose between various options and may acquire, even during the final year, a terminal specialty in vocational or commercial subjects. Practical shop-work and pre-employment classes are integrated at this level and the pupils in these courses may acquire an educational status equivalent to that of other pupils at the same level.

Between the secondary school and the university, special institutes *Collèges d'enseignement général et professionnel* (CEGEP), offer a wide variety of courses, some of which lead to university and others to the labour market, particularly to those occupations requiring technical training. The courses in these institutes are intended to perfect and reinforce the broad training of the student through certain disciplines, such as arts and philosophy, and allow him to begin or complete his occupational training. They therefore replace, through integration, a great many schools and courses previously fragmented.

It should be mentioned here that the traditional classical courses will one day disappear. Through a special program under the Department of Education, existing private institutions may become associated with regional school boards to offer secondary school instruction. By co-ordinating their secondary education with that offered by the school boards, they may attain the status of "associated institutions" and be financed wholly by the regional school boards.

Universities do not form part of the public educational system in Quebec. They are, in practice, administered by private corporations which are completely free as to the direction of their courses of study and of the entire university life.

Newfoundland

The topographical and economic circumstances of the Island influenced the development of education as did pockets of settlers establishing themselves in outposts which were relatively self-sufficient. Active leadership of the churches and homogeneity of the village populations provided a minimum of overlapping of denominations except in a few industrial areas or the larger cities. A Royal Commission recently has studied the present organization with a view to increasing the education level of the Island's population.

The present system is predominantly denominational although there are amalgamations of some Protestant boards and community schools operated by the Department of Education. The schools are administered on a local basis by the five largest denomina-

tional groups—Roman Catholic, Anglican, United Church, Salvation Army and Pentecostal Assemblies. These operate under five superintendents, each in charge of the schools of his faith, and a member of the Department. Local boards, often including the local clergymen as members, select teachers, pay salaries from government grants and look after the school property. All schools follow the provincial course of study and examinations, scholarships and diplomas are determined by an interdenominational body representing the major denominations and the Department.

Education in the Yukon and Northwest Territories

In the Yukon Territory, the school system is operated by the Territorial Government through a superintendent and staff at Whitehorse responsible to the Commissioner of the Territory who, in turn, receives instructions from the Minister of Indian Affairs and Northern Development in Ottawa. The Education Division of the Northern Administration Branch of the Department of Indian Affairs and Northern Development offers advice on education policy to the Minister and Territorial authorities. All schools, both public and separate, with the exception of the Carcross Indian Residential School (operated by the Department in co-operation with the Territorial Government) come under the direct ownership and operation of the Government of the Yukon Territory. Although there is provision for three types of schools in the Yukon—public, separate and Indian—most of the Indian children attend either the public or the separate schools. In 1967, the population was 15,000 of whom about 2,400 were Indians. By choice, the schools of the Yukon follow the British Columbia education curricula.

In the Northwest Territories (the Districts of Mackenzie, Franklin and Keewatin) the school system is operated by the Education Branch of the Department of Indian Affairs and Northern Development. The Federal Government, as the operating agency, finances school operation and receives from the Territorial Government the pupil cost for pupils who are neither Indian nor Eskimo. Enrolment for the 1967-68 term included 3,626 Eskimos, 1,544 Indians and 3,430 others, a total of 8,600 in the Northwest Territories and Arctic Quebec combined. Yellowknife public and separate school districts and Hay River separate school district are financed partly by local taxation and partly through grants-in-aid from the Federal and Northwest Territorial Governments. Inspection and supervisory services are provided by the Education Division. Alberta education curricula, subject to increasing modifications, are prescribed for the schools of the Northwest Territories. Expansion is taking place in school accommodation and basic elementary and secondary education is being provided for all children in the Territories and for Eskimo children in northern Quebec, as well as vocational training for them and for young adults showing interest and special aptitude. The program, which is an integrated one for the children of all races in the North, provides for the construction of schools and student residences, curricula designed for a northern environment, bursaries and other student aids, and special vocational training projects appropriate to both local craftsmanship and mechanical trades in such fields as construction, transportation and mining.

Special Education

Interest is increasing in the education of exceptional children—those who deviate so far from the normal as to require special educational facilities. New types of special classes are sometimes started by parents of children with a common disability, who band together to provide help and show the need for such service, which is then taken over by public bodies. Progress in providing such education varies from province to province. It is most commonly found in the city school systems; in rural areas there is usually little provision for the child who needs special attention, except for those who are admitted to residential institutions. There are six schools for the blind, 15 schools for the deaf and a number of training schools for mental defectives. Special classes are found in tuberculosis sanatoria, mental hospitals and reformatories. In many cities, there are classes for the hard-of-hearing, the partly blind and other physically and mentally handicapped children and a few for the highly gifted.

Teachers

All provinces require candidates for elementary school teacher certificates to have high school completion or better, with at least one year of professional training in a faculty of education or a teachers' college. The training usually consists of professional and academic courses, and some time spent in practice teaching. High school teachers are generally university graduates who have taken an additional year of professional training in a college of education, or who have graduated with a degree in education. The trend is for the government departments of education to give the universities responsibility for the training of elementary school teachers as well as secondary school teachers. In Newfoundland, Prince Edward Island, Manitoba, Saskatchewan, Alberta and British Columbia all teacher training is conducted at the university, where three or four different courses leading to a degree are provided. About three quarters of the time is devoted to academic courses in arts and science and the remainder to professional courses. In some of the other provinces, close contact is maintained between teacher training college and university.

In 1967-68 there were 69 normal schools and teachers' colleges and 30 faculties or colleges of education engaged in teacher training with a total enrolment of over 44,000. In the same year there were 237,000 full-time teachers in the public elementary and secondary schools in Canada and 12,000 in the private schools.

Most teachers in these schools are paid according to a local salary schedule based on years of training and experience; they contribute to a provincial superannuation scheme and are members of a provincial professional organization. In 1967-68 about 62 p.c. of them were women, of whom a little more than half were married. The median salary of all teachers and principals in the nine provinces other than Quebec was \$6,524, an increase of 17.2 p.c. over the previous year. Apart from teachers in Quebec concerning whom adequate data were not available, about 15 p.c. of those in elementary schools and about 73 p.c. of those in secondary schools had university degrees.

Higher Education

Out of the two distinct cultures upon which the Canadian nation is founded have arisen two somewhat different systems of higher education. One, originally patterned on the French system before the secularization of higher education in France with the majority of the institutions under control of Catholic orders or groups, has in recent years adapted more and more to North American traditions but still retains distinctively French characteristics. The other was originally designed more according to English, Scottish and United States practices, instruction being given in English and controlled by a variety of groups—religious denominations, governments and private non-denominational bodies. Institutions comprising a third small group and giving instruction to both English-speaking and French-speaking students are operated or controlled mainly by Catholic groups, although the first such bilingual institution to be established—the University of Ottawa—was reorganized in 1965 under a non-denominational board of governors.

Large universities, with numerous faculties and provision for graduate study in many fields, are comparatively recent phenomena. Until the middle of the nineteenth century, higher education in Canada included little more than arts and theological training. From that time, more instruction in science and certain professional fields was gradually introduced. Graduate studies, to judge by the number of earned doctorates, did not acquire numerical importance until after 1920. In 1967-68, 1,048 earned doctorates were granted.

Civil legislation regarding the establishment of new institutions, or changes in existing ones, is usually enacted by provincial legislatures, except for federal military colleges and a few institutions originally established by Act of the Canadian Parliament. Once an institution is legally chartered, control is vested in its governing body, the membership of which is indicated in the charter. The line of authority runs from the board of governors through the president (or *recteur*) to the senate and deans and the faculty as a whole.

The composition of the board of governors varies according to the type of institution. Provincial universities normally have government representation; church-related institutions have clergymen. Nearly all boards have either direct representation from the

business community, alumni associations and other organizations, or are advised by these groups through advisory boards or committees. The size of the board varies from a very few to over sixty. It has ultimate control of the university and normally reserves to itself complete financial powers, including the appointment of the president and most other staff. On occasion there will be faculty representation on the board and recently there have been attempts on the part of faculty groups of many institutions to obtain greater representation on the boards of governors. Responsibility for academic affairs is usually delegated to the senate. Composed mainly of faculty members, although there may also be alumni and representatives of non-academic groups included, it is responsible for admission, courses, discipline and the awarding of degrees.

Although there are variations, most students enter a university after the completion of from 11 to 13 years of elementary and secondary schooling. In from three to five years, courses of instruction lead to a bachelor's degree in arts, pure science and such professional fields as engineering, business administration, agriculture and education. Courses in law, theology, dentistry, medicine and some other fields are longer—usually requiring for admission completion of part or all of a first-degree course in arts or science. For those pursuing graduate studies and research, the second degree is normally the master's or *licence*—at least one year beyond the first degree—and the third is the doctorate, normally requiring at least two additional years beyond the second degree.

There are about 400 institutions of higher education in Canada, of which about 60 have degree-granting powers (not including about a score that confer degrees in theology only). Full-time enrolment in the fall of 1967 was 261,207, a 12.2-p.c. rise over the previous year. The tremendous increase in demand for university places in recent years has resulted in a rapidly intensifying crisis in the financing of higher education, and a commission under the chairmanship of Dean Vincent Bladen of the University of Toronto was set up in 1963 by the then Canadian Universities Foundation, now the Association of Universities and Colleges of Canada, to study the financing of higher education in Canada. The Commission presented its report in the fall of 1965; among its recommendations were many referring to increased federal support for the universities. The current financing of universities is discussed at pp. 358-359.

In addition to the full-time university-grade enrolment, almost as many students are enrolled at the pre-matriculation level or are taking university-grade courses on a part-time basis, whether in the evenings, during summer session or by correspondence. The numbers of graduates in most faculties for 1966-68 are given in Table 10, p. 357.

Trade and Technical Education and Training

Increasing use of automated processes in business and industry is resulting in a shrinking market for unskilled and semi-skilled workers. Early school dropouts are finding it increasingly difficult to find suitable employment and many are now trying to acquire in their adult years the general education or training in the skilled trades that they missed in their youth. Those persons still in the regular school system are tending to remain longer and go farther in the system, partly because of the changing attitudes of society toward education and partly for economic reasons.

Hand in hand with this growing demand for better educational facilities, educators are striving to provide comprehensive programs at all levels to meet the needs not only of the university-bound but also of the great majority who require adequate preparation for early entry into the labour force. It is now accepted that vocational education for adults as well as for youths is a public responsibility which must be provided, as needed, throughout the man's working life. Education of this nature is of national concern and has a direct impact upon material prosperity, the economy and the standard of living.

The pattern of vocational education in Canada varies from province to province and there are variations within the provinces. However, there are three basic types of institutes offering vocational education—secondary schools, trade and occupational training schools and post-secondary institutes of technology. Many municipal school

boards provide vocational courses as part of the regular secondary school program in technical or composite-type schools. Students in these schools get some general vocational training or training in certain specific fields, such as typing or auto-mechanics, along with instruction in general academic or cultural subjects.

Trade and occupational training schools, on the other hand, are open only to those who have passed the provincial school-leaving age and have left the regular school system. These schools offer specialized training and their purpose is to develop competent people for a wide variety of occupations. Courses at the trade level do not usually require high school graduation; the grade level demanded, which varies according to province or trade, ranges from grade eight to grade 12.

The third type, the institutes of technology, operate at a higher level of training. Enrolment in the institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences. Graduates from

The Northern Alberta Institute of Technology at Edmonton is one of the recently established institutes across the country providing post-high school students with employable skills required by specific areas of industry, business and government. This Institute, in eight buildings essentially under one roof, has 171 shops and laboratories and 109 classrooms equipped with the most modern facilities to accommodate 4,800 day students at one time and a possible 6,000 at night school.

institutes of technology are awarded diplomas of applied arts or diplomas of technology and form an essential link between the professionals on the one hand and qualified craftsmen on the other. Most of the institutes of technology and trade schools across Canada are provincially operated.

In addition to the vocational education and training provided by these three types of publicly operated schools, many private business colleges and trade schools offer a wide variety of business, trade and technical courses, some through correspondence. Vocational education is also carried out under a system of apprenticeship training. Such training is given mainly on the job, with classes taken at the trade schools either during the evening or on a full-time basis during the day for periods ranging from three to 10 weeks a year.

Under the Adult Occupational Training Act, the Federal Government takes full responsibility for financing the cost of training adults who are or should be in the labour force. The cost of providing primary, secondary and post-secondary education remains a provincial responsibility.

If, in the opinion of a Manpower Counsellor, it is in the best interest of the individual and of the economy for an adult to undertake training or retraining, it will be purchased by the Federal Government from a public or private training institution or from industry.

The program also provides for the payment of allowances to persons who have adult economic responsibilities to enable them to take training but it intentionally avoids the payment of such allowances to youth whose education should normally be provided by the province. Adult trainees who have been three years in the labour force, which includes periods during which employment was being sought, or those who have dependants, are paid these allowances, which range from \$37 to \$96 per week.

The federal-provincial Capital Assistance Program begun under a former agreement has been extended for the benefit of those provinces which were not able to take full advantage of the previous program. This will allow for a continued expansion of facilities to carry out a variety of vocational programs. During the period Apr. 1, 1961 to Mar. 31, 1968, projects valued at nearly \$1,676,000,000 were approved, which, when all completed, will provide a total of 496,298 new places for students, most of whom will be enrolled in two- or three-year courses. These included the construction of 581 new high schools with facilities for vocational training plus major additions to 117 such schools; construction of 88 new trade schools and enlargement of 113 existing trade schools; and construction of 19 new technical institutes plus major additions to 20 existing institutes. In addition, 187 minor projects and three special equipment projects were undertaken involving extension to existing schools. The additional facilities are summarized by province as follows:—

Province or Territory	New Schools	Major Projects Involving Additions to Existing Schools	Minor Projects Involving Additions to Existing Schools	New Student Places
	No.	No.	No.	No.
Newfoundland.....	13	1	4	3,870
Prince Edward Island.....	3	1	6	1,561

An intriguing exhibit resembling a cluster of metal umbrellas is actually a musical instrument that produces sounds like those of steel drums.

Ontario's Centennial Centre for Science and Technology, to be completed in 1969, is designed to increase public understanding of achievements and aims of science and technology and to interest young Canadians in careers in these fields. Its complex of buildings in Metro Toronto combine many functions of exhibition, trade fair, museum, school and university, devoted to the present and the future and with an appeal to all age groups.

Adult Education

A variety of opportunities is provided to adults for further academic, vocational and cultural experiences beyond the regular full-time school system for young people. Each province has developed its own programs, operated mainly by local school boards and provincial universities and supplemented by independent universities and private organizations. The Federal Government sponsors some adult education programs and provides grants-in-aid to the province for others.

A limited survey of adult education was conducted in 1965-66 (see p. 360), the sponsors covered reporting a total enrolment of 1,157,074. Of this enrolment, academic courses leading to a high school or university degree accounted for 25 p.c.; professional training, including university-sponsored refresher courses and technical, trade and business courses, provided under various auspices, accounted for 28 p.c.; health and social education courses including courses in marriage preparation, citizenship training, first aid, water safety, child care, nutrition, and courses designed to assist in the treatment or prevention of specific diseases accounted for 39 p.c.; and fine arts and other cultural subjects made up the remainder.

Many public and private institutions and organizations also sponsor informal public lectures, film showings, guided tours, musical and dramatic performances and similar activities of an educational nature for adults. Workshops, conferences and residential adult education, as well as regular courses, help to prepare those who staff these activities.

How Education Costs are Met

In 1966 about 10 p.c. of Canada's total national income was spent on formal education. Over 20 p.c. of all municipal, provincial and federal revenue went for education and of the amount so spent, the municipalities provided 28 p.c. and the provinces 48 p.c.

As stated on p. 334, the actual operation of public elementary and secondary schools is in the hands of the local elected or appointed school boards which determine the budgets and therefore the amount of taxes required for school purposes. In most cases, these taxes are levied and collected for the boards by the municipalities; however, in those areas where there is no municipal organization the school boards have the power to levy and collect taxes for school purposes. At present, local governments provide 50 p.c. of the cost of operating the public schools, provincial grants provide 48 p.c. and the remainder is obtained from various other sources. Except in Newfoundland, fees are almost non-existent. Four provinces—British Columbia, Alberta, Manitoba and Nova Scotia—pay operating grants on an equalization formula and thus ensure at least a minimum level of education throughout the province; the standard is determined either in terms of so much per pupil, or from an established salary scale for teachers with a prescribed teacher-pupil ratio, or by some combination of these.

In Newfoundland where municipal organization scarcely exists outside certain larger centres, there are three school-tax areas (centres). Consequently only about 2.2 p.c. of school revenue is provided by local taxation; the province provides about 91 p.c. and most of the remainder is paid by parents in the form of fees. In Prince Edward Island where there is no municipal organization outside of the cities of Charlottetown and Summerside, the school boards levy and collect property and poll taxes but the province provides about two thirds of the operating costs. Ontario and Saskatchewan make use of various equalization and incentive grants and New Brunswick uses a combination of a basic grant per pupil and special grants. Most provinces provide grants for school buildings and equipment, establish loan funds, and guarantee debentures for school purposes and assist in selling them.

In 1966-67, universities and colleges received 66 p.c. of their current operating funds from provincial governments and the Federal Government, 22 p.c. from fees, 2 p.c. from endowments and gifts and 10 p.c. from a variety of other sources. Private schools and colleges are normally supported by student fees, endowment income, gifts and income from sponsoring bodies.

Federal Contributions to Education

Some 60 Federal Government departments and agencies contribute to education in one way or another. As stated on p. 333, the Federal Government has no responsibility for the organization and administration of education. It has, however, a vital interest in the general level of education and skills of the population and the extent of the scientific research carried on in Canada, realizing the profound effect these factors exercise upon the development of the national economy.

Beginning with the 1967-68 fiscal year, the federal support to education underwent a significant change. The total federal contribution to education was increased substantially but the form of this support and the method of its distribution was altered in certain key areas. There were three important changes. (1) Operating grants to universities and colleges computed in the past at so many dollars per capita of provincial population (the 1966-67 rate was approximately \$5 per capita) were discontinued and the program replaced by a broader program of financial support to post-secondary education more advantageous to the provinces and explained more fully below. (2) With the expiry on Mar. 31, 1967, of the federal-provincial agreements concluded under the terms of the Technical and Vocational Training Act of 1961, these agreements, after six years of operation, were not renewed, except that the agreement for the training of the unemployed was extended to July 1, 1968, and the agreement on financing capital projects was maintained until each province will have received the increased maximum federal contribution stipulated by law. In place of the vocational training programs conducted under the expired agreements with the provinces, the Federal Government now pays the full cost of vocational training of adults, including living allowances, under the Adult Occupational Training Act (SC 1967,

c. 94). (3) The Federal Government announced, in general terms, its willingness to increase grants for specific research projects undertaken by individual professors and other researchers at universities.

In 1967-68, the Federal Government spent \$310,000,000 on vocational training. Of this total, \$85,900,000 was spent under the old agreements, mostly for the training of the unemployed, but also some small amounts for other programs being discontinued, and \$119,000,000 for capital projects. The remaining \$105,100,000 was spent on the new scheme of vocational training. During the same period, grants for specific research projects amounted to \$69,700,000, or 43.6 p.c. more than in the previous year. Thus, federal expenditures on these two programs amounted to almost \$380,000,000, about \$46,000,000 more than was spent in 1966-67 on the three major programs then in operation. This included operating grants to universities, now discontinued, which cost the federal treasury \$71,000,000 in 1966-67.

As a result of the federal-provincial conference of October 1966, the Federal Government undertook to provide increased support to education. Recognizing that education is a provincial responsibility, it decided to discontinue payment directly to universities of operating grants, and to expand its support beyond university education and include in its program all, or almost all, post-secondary education, i.e., the educational institutions and courses requiring for admission at least junior matriculation, or its equivalent, in each province. The provinces have been offered the choice of either a federal grant amounting to \$15 per head of population, or 50 p.c. of operating costs of post-secondary education, whichever is the greater. Implementing this proposal, Parliament passed, in March 1967, the Federal-Provincial Fiscal Arrangements Act, 1967, dealing with this program, and placed the responsibility for its administration upon the Department of the Secretary of State. Under the terms of this Act certain percentages of federal revenues plus required cash were to be transferred by the federal treasury to the provinces commencing with the 1967-68 fiscal year, and to continue for five years. It is estimated that when final provincial claims for 1967-68 are settled, the financial resources transferred to the provinces will amount to \$400,600,000, and estimates for 1968-69 are in excess of \$500,000,000.

The student loan program is operated under the Canada Student Loans Act (SC 1964, c. 24), assented to July 28, 1964, when \$40,000,000 was set aside to enable full-time students to borrow up to \$1,000 annually, interest-free for five years—the \$5,000 or less to be repaid with interest commencing six months after the student has graduated. Provision is made for the allocated amount to be increased year by year in proportion to the number of persons 18-24 years of age in the population. The purpose of the loan plan is to assist those students who, for financial reasons, would otherwise be prevented from getting a post-secondary education or would not be able to devote full time to their studies. These loans may be made only on the basis of certificates of eligibility issued by the participating province through the university or institute of technology concerned. There is no upper or lower age limit for eligibility. The loan scheme is operated by the chartered banks, the Federal Government guaranteeing the loans and paying the interest while the student is attending college. All provinces except Quebec participate; Quebec offers its own student assistance program for the benefit of Quebec residents.

The Act provides for basic allocations for each province, establishing the limit to which each may authorize loans under the Act. It also provides for supplementary allocations that may be used to compensate for differences in relative demand as between provinces, based on provincial population in the 18-24 year age group. The basic allocations for the year 1967-68 for participating provinces totalled \$45,700,000, in addition to which there was authority for discretionary allocations up to \$13,300,000, making a total maximum of \$59,000,000 authorized under the Act. Loans actually authorized amounted to \$57,100,000. In addition, federal payments to banks and other lending institutions in respect of interest on outstanding loans and certain claims arising out of the operation of this program amounted to \$6,462,000.

Under the Adult Occupational Training Act (SC 1967, c. 94), assented to on May 8, 1967, the Minister of Manpower and Immigration may enter into agreements with provinces to provide for the payment by Canada to the provinces of contributions in respect of the capital expenditures incurred by the provinces on occupational training facilities. These agreements, which are in effect the continuation of the previous agreements entered into under the discontinued Technical and Vocational Assistance Act of 1961, provide for extended and increased federal assistance in acquiring facilities for vocational training, including vocational high schools, technical institutes, trade and occupational centres.

The Act provides for federal contributions of 75 p.c. of the cost of approved projects up to the maximum amount of \$480 per head of the "youth population of the province in 1961", i.e., in the age group 15-19 years, as ascertained by the census. Beyond that limit, federal contributions of 50 p.c. are authorized for up to an additional amount of \$320 per capita of the "youth population" of 1961. The aggregate of all federal contributions made to the provinces since Apr. 1, 1961, under the terms of the "former agreement" are to be included in determining the level and limit of the federal contributions in respect of capital projects. There is no time limit stipulated for this program.

As the 1961 population aged 15-19 years numbered 1,432,559, the maximum federal contribution for vocational training facilities could amount to a little more than \$1,146,000,000 if all the provinces took advantage of this program to the limit established by the Act. The estimated value of all provincial projects approved by the federal authorities during the period Apr. 1, 1961 to Mar. 31, 1968, amounted to over \$1,677,000,000, the federal contribution being almost \$918,000,000 when all projects are completed. In the same period the actual cash payments made by the federal treasury to the provinces amounted to almost \$711,500,000.

In 1966, the Federal Government inaugurated another program of massive financial support to the provinces for the purpose of providing badly needed facilities for training professional personnel in health services, to be administered by the Department of National Health and Welfare. The Health Resources Fund Act (SC 1962, c. 42) received assent on July 11, 1966. In accordance with a recommendation of the Royal Commission on Health Services in 1964, the Act provides for the establishment of a Health Resources Fund to assist financially in the planning, acquisition, construction, renovation and equipping of health training facilities, defined to mean any school, hospital or other institution for the training of persons in the health professions or any occupations associated with the health professions, or for the conducting of research in the health field, but excluding any residential accommodation.

The Health Resources Fund was established by the Act in the amount of \$500,000,000 to be applied to costs incurred between Jan. 1, 1966 and Dec. 31, 1980, a period of 15 years. The \$500,000,000 Fund was divided under the Act into three parts: \$300,000,000 was allocated to the provinces on a per capita basis; \$25,000,000 was allocated to the four Atlantic Provinces for joint projects; and \$175,000,000 remained to be allocated by the Governor in Council. Contributions are payable to the provinces in amounts of up to 50 p.c. of the costs of the projects approved by the Minister's Advisory Committee as part of a five-year plan for the development of health training facilities in a province.

During 1966-67, the first year of operation of the Fund, \$4,705,000 was paid to the provinces in respect of various approved projects. In 1967-68, further payments amounting to \$32,645,000 were made by the federal treasury for a total up to Mar. 31, 1968, of \$37,350,000. Most of the projects financed so far involve training facilities in universities or institutions connected with or operated by schools of medicine. However, in 1967-68, \$2,264,000 was spent on projects in institutions not directly related to universities and was therefore classified as being spent on post-secondary vocational training facilities.

The Federal Government through the Canada Council in 1957 provided an amount of \$100,000,000, half of which was to be distributed among the universities for specified building and equipment purposes, similar to the distribution of grants. Interest from the remaining \$50,000,000 was to be used to assist in the development of the arts, humanities and social sciences mainly through scholarships (see pp. 374-375).

Other contributions are more indirect and include scholarships, research grants and reports or services of value to the schools. Research grants are made by the National Research Council, the Defence Research Board, the Department of National Health and Welfare, the Department of Manpower and Immigration and other agencies. Some Departments such as Agriculture, Health and Welfare, etc., provide materials and publications of value in the school programs, and the National Museums, the National Gallery, the National Film Board and the Canadian Broadcasting Corporation contribute directly or indirectly to various school programs (see pp. 364-374).

More directly, the Federal Government is responsible for the education of the Eskimos, Indians and white persons in the Territories (see p. 337), the Indians on the reserves, prisoners in penitentiaries, members of the Armed Services and their dependants and in-service training for permanent personnel. It also assists in citizenship training and other out-of-school informal education activities.

The Canadian International Development Agency (formerly the External Aid Office) is responsible for the operation and administration of external assistance programs, including educational assistance to Commonwealth and other countries. In the academic year 1967-68, such assistance consisted of 579 teachers including teacher college personnel, 103 university staff members sent out individually or in teams, and 350 (calendar year 1967) technical advisers in vocational education, health and welfare, government administration and other areas. More than 7,000 persons have been trained in Canada since 1950; the number enrolled in 1967-68 was 3,469, compared with 2,964 in the previous year. The objective of this training is the development of an indigenous training capability in the emerging countries and persons trained in Canada are expected to return to their homelands to convey their skills to others.

From 1950 to 1968 Canada's expenditures abroad on capital projects and technical assistance in aid of education amounted to about \$111,950,000. Capital assistance includes the building and equipping of educational institutions; major projects include Canada Hall, a residence for the University of the West Indies in Trinidad; technical institutes in Ghana and Nigeria; technical equipment to schools in Malaysia and Tanzania; and audio-visual equipment, handicraft supplies and other teaching aids to various developing countries.

In 1967-68, under the Commonwealth Scholarship and Fellowship Plan which began in 1960, some 334 Commonwealth students were studying in Canada (see also p. 150). Canada has a number of voluntary agencies interested in aiding students from other countries, several of which receive some assistance from the Federal Government.

External Educational Assistance

Some 10,000-15,000 full-time university students, a large proportion of them in the graduate schools, come to Canada each year from many countries; the largest number are from the United States although the number from Commonwealth and other countries is increasing very rapidly. The external enrolment in 1968 represented about 5.9 p.c. of the total enrolment. The number of such students is about equal to the number of Canadians studying abroad. (See Table 9, p. 356.)

Section 3.—Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be classified as either publicly controlled or private. The publicly controlled schools include: the public and separate schools under local school boards—by far the most numerous group; provincial schools which at this level are limited mainly to trade schools, correspondence courses, and special schools for the blind and deaf; and federal schools for Indians, for children in the Northwest Territories, and for the children of members of the Armed Forces overseas. Private schools may be academic, business (commercial), trade, technical, correspondence or even a combination of these.

Institutions of higher education may be provincial, church, independent universities and colleges, or federal military colleges. In addition there are community colleges, teachers' colleges, theological institutions and schools for such specialized fields as nursing, agriculture, paper-making, fisheries, graphic and fine arts, languages, etc. Some of these are provincial and some private.

Most organized classes for adults operate under the auspices of universities, colleges, local school boards, churches or community organizations.

Table 1 shows full-time enrolment at all levels each year for the period 1958-59 to 1967-68 and Table 2 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the school year 1966-67. In all types of schools the number of pupils has increased each year over that period. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counter-balanced by the closing of many one-room rural schools.

1.—Full-Time Enrolment in Elementary and Secondary Schools, and in Universities and Colleges, School Years 1958-59 to 1967-68

¹ Day, residential and hospital schools administered by the Federal Government. ² Includes affiliated colleges and schools of post-matriculation. ³ Also included with "Higher Education". ⁴ Includes indentured apprentices taking full-time, part-time and correspondence courses. ⁵ Included with Nova Scotia. ⁶ Includes enrolment in courses sponsored by public libraries, business colleges and trade schools, teacher-training institutions, museums and art galleries. ⁷ Limited survey only; does not include agricultural and vocational courses. ⁸ Includes 4,737 enrolments in private trade schools, not distributed by province.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1965 is presented in Table 3, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1963-65 are given at pp. 354-355 and financial statistics for universities and colleges at pp. 358-359.

¹ Includes the Yukon and Northwest Territories.

² Limited to reported expenditures of public funds.

³ Includes capital costs from current funds.

Subsection 1.—Elementary and Secondary Schools

Control.—As stated on pp. 334-335, direct control and operation of public schools is by school boards, which operate under school laws and regulations. School boards may be boards of larger units, local boards within larger units or independent boards for rural schools, towns or cities, the members of which may be all elected, partly elected and partly appointed or all appointed; some schools are operated by trustees appointed by the province in lieu of a board. As their designations imply, private schools are administered by private organizations and federal schools by federal authorities.

Table 4 gives the number of active independent public school boards and school trustees in each province as at December 1967.

4.—Active School Boards and School Trustees, by Province, as at December 1967

¹ As at September 1967.

Enrolment.—Table 5 shows enrolment of all elementary and secondary pupils in Canada and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures. Enrolment in private schools accounted for 3.6 p.c. of the total 1966-67 enrolment at the elementary and secondary levels. Schools operated by Federal Government departments, that is, schools for Indian children, schools in the Territories and overseas schools for children of Service personnel, accounted for about 0.9 p.c. of the total.

School enrolment has been increasing in recent years much more rapidly than the general population. Total school enrolment in 1966-67 represented a 3.1-p.c. increase over the previous year. In comparison, the annual rates of increase in total school enrol-

ment for the three previous years ranged from 3.2 p.c. to 4.1 p.c.; the country's population during the same period increased annually by amounts varying from 1.7 p.c. to 1.8 p.c.

**5.—Enrolment in Publicly Controlled, Private and Federal Schools, by Grade,

¹ Includes an estimate for public schools.

² Includes Ungava District of Quebec.

³ Total for

Yukon Territory was 3,444 pupils.

Teaching Staffs.—Between the school years 1946-47 and 1966-67, the number of teachers in the publicly controlled schools of the ten provinces increased from 78,789 to 218,044 or 177 p.c., the number of men teachers increased by 289 p.c., and the number of women teachers by 141 p.c.

After moderate increases from 1947 to 1960, median experience of teachers declined over the following six years, a trend attributable to the large number of new teachers entering the profession. Because most of these new teachers have been employed in the cities, median experience there has declined rapidly from a high in 1946 of 16.4 years in eight provinces (excluding Quebec) to a low in 1966 of 6.3 years in nine provinces (excluding Quebec). The median experience of all teachers did not show such a pronounced decline, ranging between 6.9 and 8.3 years up to 1960 and then declining to a new low of 6.6 years for nine provinces (excluding Quebec).

The median salary in 1966-67 for all teachers in nine provinces (excluding Quebec) was \$5,567, representing an increase of 285 p.c. over the median salary in 1946-47 of \$1,446, based on data from nine provinces (excluding Quebec throughout and Newfoundland prior to 1948-49). The rate of increase from one year to the next has fluctuated considerably, ranging from 16.8 p.c. between the school years ended in 1947 and 1948 to 2.4 p.c. between 1962 and 1963. The increase between 1965 and 1966 was 5.3 p.c. and that between 1966 and 1967 was 6.7 p.c.

¹ Comprises teachers and principals instructing or supervising elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary if they teach in elementary public or separate schools.

² Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary only if they teach in secondary schools.

Financial Support.—Table 7 shows details of the income of public school boards for the years 1963-65. In most provinces, local taxation is the most important source of revenue, followed by provincial government grants. In 1965, all other sources of income accounted for 2 p.c. of total current revenue. (See also p. 344.)

Not all provinces collect and publish figures for debenture indebtedness, although it is the usual practice in all provinces, except Newfoundland, for boards to finance new construction, at least in part, by issuing debentures. Provincial aid toward capital expenditures may take the form of a percentage of total cost, a fixed amount per classroom or assistance with debenture debt charges. Many provinces guarantee debentures issued by school boards and others assist in marketing them.

7.—Income of School Boards for Publicly Controlled Elementary and Secondary Schools, by Province, 1963-65

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation.

Subsection 2.—Universities and Colleges

Institutions.—An institution of higher education in Canada is generally defined as one that offers one or more years of work beyond the most advanced high school grade in the province in which it is located, with all or part of the work offered being acceptable for credit toward a university degree or equivalent diploma. The definition thus excludes institutions offering technical and vocational post-high school courses for which credit is not given.

In 1967-68 there were nearly 400 institutions of higher education in Canada, of which about 60 have degree-granting powers (not including about 20 that confer degrees in theology only).

Enrolment.—Full-time university-grade enrolment continues to increase year by year and indications are that enrolments may well reach the 400,000-mark in another three

years. Table 8 shows full-time enrolment by province for the academic years ended 1965-68. In addition to full-time students, there were about 99,000 part-time university-grade students (including over 10,600 graduate students) in attendance during the regular 1967-68 winter session, and an estimated 6,000 students take university-grade credit correspondence courses each year. University-grade summer school enrolment was over 85,000 in 1968.

Foreign enrolment has risen considerably during the past decade, with a larger proportion of students from countries other than the United States and Britain coming to Canadian institutions, as shown in Table 9. The United States, Hong Kong, France, Trinidad and Tobago, India and Britain each accounted for over 500 students, and Pakistan, Malaysia, Viet-Nam, Nigeria, Jamaica, the Republic of China, Japan, Germany, Guyana, Formosa, Ghana, Lebanon, Bermuda, Australia and Haiti contributed from 100 to 400 each. About 150 other countries or territories were represented in the figures.

Finances.—Table 13 gives a 10-year series of the finances of Canadian universities. Since 1954 they have received more than one half of their revenue from government grants and a very small amount from municipal councils. Beginning with the academic year 1951-52 and ending in 1966-67, the Federal Government provided university grants to help meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions received their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to \$1.00 per capita in 1956-57, to \$1.50 in 1958-59 and to \$2.00 in 1962-63. In 1966-67 the grants, under a somewhat modified formula, were increased to about \$5.00 per capita. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Foundation (now the Association of Universities and Colleges of Canada), which administers the fund. In 1960-61 the Quebec Government and the Federal Government negotiated

a new tax-sharing agreement under which Quebec provided its own grants and was reimbursed by an abatement of corporation tax. Commencing with 1967-68 the Federal Government discontinued paying grants directly to universities. Instead, the government agreed to transfer to the provinces financial resources (certain portions of federal revenues and required cash payments) equal to either \$15.00 per capita or 50 p.c. of the operating costs of the post-secondary education, whichever is the greater. The financial resources so transferred are disbursed by provincial governments at their discretion. (See also p. 345.)

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was \$50,000,000 (interest and profits to Mar. 31, 1968 increased it to over \$68,133,000), to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. Up to the end of March 1968, a total of over \$68,000,000 had been authorized. Grants are paid in four equal instalments spread over the period of construction so that there is a time lag between approval and payment. On Mar. 31, 1968, there remained a balance of unpaid grants totalling \$5,970,000 for construction projects still in progress. Any interest earned on that amount during 1968-69 would be distributed on Mar. 31, 1969. The Canada Council was also endowed with an additional \$50,000,000 (increased by \$10,000,000 Apr. 3, 1965), the interest on which is available for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences (see pp. 374-375).

13.—Current Income and Expenditure of Universities and Colleges, Academic Years Ended 1958-67

Academic Year Ended—	Current Income					Total Current Expenditure

Subsection 3.—Vocational Education

Table 14 summarizes the data on full-time vocational training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to three-year vocational high school courses or post-secondary courses offered in provincial institutes of technology. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or an institute of technology.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

¹ Excludes 3,210 full-time students in one-year preparatory courses at institutes of technology. ² Enrolments of full-time students under the various programs of the federal-provincial agreements for the year ended Mar. 31, 1967. ³ Includes students from other Atlantic Provinces. ⁴ Includes one school in Newfoundland. ⁵ Includes one school in Newfoundland and one in Prince Edward Island. ⁶ An additional 7,658 registered apprentices took classroom training on a part-time basis and 55 took training by correspondence courses. ⁷ Nine provinces only; Quebec figures not available. In addition, there were 6,709 students in trade schools and 11,014 in business colleges taking part-time courses, 9,858 taking correspondence courses and 78 taking special courses.

Subsection 4.—Adult Education

Adult education benefits from a wide variety of sponsors, both public and private, but most important in this respect are government departments and agencies at all three levels. Although the Federal Government makes substantial contributions, provincial departments of education, of course, play the major role since education is a provincial responsibility. Total adult education enrolment reported in 1965-66 was 1,157,074. This may appear to be a large decrease from the 2,854,065 reported in 1964-65 but it is not an actual one. The survey taken in 1965-66 was limited and did not include either agricultural or vocational education, although these two together had reported an enrolment of almost 1,700,000 the year before. Nor did as many institutions report in the categories that were covered. Taking these two factors into consideration, plus the general increase that is known to have taken place from other evidence, it can be safely estimated that more than 3,000,000 adults were enrolled in some type of educational activity in 1965-66.

Almost 4,300,000 persons were reported as attending public lectures, film showings (exclusive of commercial theatres), and similar public events of an informative nature.

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

Section 1.—The Arts and Education*

Fine Art Schools, Galleries and Organizations

Fine art (architecture, painting and drawing, commercial and decorative arts, graphics, ceramics and sculpture) appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. Six universities offer a Bachelor of Fine Arts degree:—

Mount Allison University, Sackville, N.B.
 Sir George Williams University, Montreal, Que.
 University of Windsor, Windsor, Ont.
 University of Manitoba, Winnipeg, Man.
 University of Alberta, Edmonton, Alta.
 University of Victoria, Victoria, B.C.

Eleven universities offer a Bachelor of Arts degree with a major in fine art:—

Université de Moncton, Moncton, N.B.
 McGill University, Montreal, Que.
 Sir George Williams University, Montreal, Que.
 University of Guelph, Guelph, Ont.
 McMaster University, Hamilton, Ont.
 University of Toronto, Toronto, Ont.
 University of Western Ontario, London, Ont.
 University of Windsor, Windsor, Ont.
 University of Saskatchewan, Saskatoon and Regina, Sask.
 University of Calgary, Calgary, Alta.
 University of British Columbia, Vancouver, B.C.

There are many schools of art with varying academic requirements for admission. These offer diploma or certificate courses and are concerned largely with the technical development of the artist. Among those widely known are:—

Nova Scotia College of Art, Halifax, N.S.
 École des Beaux-Arts, Quebec, Que.
 École des Beaux-Arts, Montreal, Que.
 Institut des Arts Appliqués, Montreal, Que.
 School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
 Lakehead College of Arts, Science and Technology, Port Arthur, Ont.
 Ontario College of Art, Toronto, Ont.
 University of Manitoba School of Fine Arts, Winnipeg, Man.
 School of Art, Regina Campus, University of Saskatchewan, Regina, Sask.
 Alberta College of Art, Calgary, Alta.
 Banff School of Fine Arts, Banff, Alta.
 Vancouver School of Art, Vancouver, B.C.
 Kootenay School of Art, Nelson, B.C.
 University of Victoria, Victoria, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. In some of these schools fine crafts as well as fine arts are taught. Summer schools of art are sponsored by some of the foregoing institutions, by universities and by various independent groups. One of the more important summer schools is the Banff School of Fine Arts, affiliated with the University of Calgary.

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and concerts are features of the programs of the various galleries.

* Revised, except where otherwise noted, by the Extension Services of the National Gallery of Canada, Ottawa.

Many of these institutions supply their surrounding areas with travelling exhibitions and some range even farther afield. Several organizations such as the Maritime Art Association, the Atlantic Provinces Art Circuit, the Western Canada Art Circuit, the Art Institute of Ontario, the Art Gallery of Ontario and the new *Fédération des centres culturels du Québec* have been founded to carry out this sort of travelling program on a regional basis. On a smaller scale, art circuits are organized to serve certain areas such as those around St. John's, Nfld., Charlottetown, P.E.I., Trois-Rivières and Hull, Que., and Winnipeg, Man. The National Gallery of Canada conducts a nation-wide program of this nature and is the third largest circulating agency in North America. Several galleries maintain an art-rental service.

Among the principal public art galleries are:—

Fathers of Confederation Art Gallery and Museum, Charlottetown, P.E.I.
 Beaverbrook Art Gallery, Fredericton, N.B.
 The New Brunswick Museum, Saint John, N.B.
 Montreal Museum of Fine Arts, Montreal, Que.
 Musée d'Art Contemporain, Montreal, Que.
 Musée du Québec, Quebec, Que.
 Art Gallery of Hamilton, Hamilton, Ont.
 Art Gallery of Ontario, Toronto, Ont.
 Kitchener-Waterloo Art Gallery, Kitchener, Ont.
 National Gallery of Canada, Ottawa, Ont.
 Public Library and Art Museum, London, Ont.
 Sarnia Public Library and Art Gallery, Sarnia, Ont.
 Willistead Art Gallery, Windsor, Ont.
 Winnipeg Art Gallery, Winnipeg, Man.
 Mendel Art Gallery, Saskatoon, Sask.
 Moose Jaw Art Gallery and Museum, Moose Jaw, Sask.
 Edmonton Art Gallery, Edmonton, Alta.
 Art Gallery of Greater Victoria, Victoria, B.C.
 Vancouver Art Gallery, Vancouver, B.C.
 Art Gallery of Victoria, Victoria, B.C.

Other important collections of art are housed in arts councils and university galleries.

Among university galleries are:—

St. John's Memorial University Art Gallery, St. John's, Nfld.
 Dalhousie University Art Gallery, Halifax, N.S.
 Creative Art Centre of the University of New Brunswick, Fredericton, N.B.
 Owens Museum of Fine Arts, Mount Allison University, Sackville, N.B.
 Université de Moncton, Moncton, N.B.
 McGill University, Montreal, Que.
 Université Laval, Quebec, Que.
 Séminaire des Clercs de St-Viateur, Joliette, Que.
 Sir George Williams University Art Gallery, Montreal, Que.
 Agnes Etherington Art Centre, Queen's University, Kingston, Ont.
 Carleton University, Ottawa, Ont.
 Hart House, and Sigmund Samuel Canadiana Gallery of the University of Toronto, Toronto, Ont.
 McIntosh Memorial Art Gallery, University of Western Ontario, London, Ont.
 York University, Toronto, Ont.
 University of Manitoba, Winnipeg, Man.
 Norman Mackenzie Art Gallery of the University of Saskatchewan, Regina, Sask.
 University of Saskatchewan, Saskatoon, Sask.
 University of Alberta, Edmonton, Alta.
 University of Calgary, Calgary, Alta.
 Fine Arts Gallery of the University of British Columbia, Vancouver, B.C.

Five of the more important galleries connected with arts councils are the St. Catharines and District Arts Council, St. Catharines, Ont., the Glenhyrst Arts Council, Brantford,

Ont., the Department of Fine Arts, McMaster University, Hamilton, Ont., the Brandon Allied Arts Centre, Brandon, Man., and the Art Gallery of the Calgary Allied Arts Centre, Calgary, Alta.

Among the leading fine art organizations of national scope, exclusive of museums and art galleries, are:—

- Association of Canadian Industrial Designers
- National Design Council
- Canadian Conference of the Arts
- Canadian Craftsmen's Association
- Canadian Society for Education through Art
- Canadian Group of Painters
- Canadian Guild of Potters
- Canadian Handicrafts Guild
- Canadian Museums Association
- Canadian Society of Graphic Art
- Canadian Society of Painter-Etchers and Engravers
- Canadian Society of Painters in Water Colour
- Canadian Society of Landscape Architects
- Federation of Canadian Woodcarvers
- Royal Canadian Academy of Arts
- Royal Architectural Institute of Canada
- Sculptors' Society of Canada
- Town Planning Institute of Canada
- Canadian Centre for Films on Art
- Community Planning Association of Canada.

The National Gallery of Canada.—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquess of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the Government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under this management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, a Board of Trustees, reporting to the Secretary of State, administers all the National Museums of Canada, including the National Gallery. In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance were transferred to new modern quarters—the Lorne Building in downtown Ottawa—which provides adequate well-lighted space for hanging the permanent collection and for displaying travelling exhibitions.

The Gallery's collections have been built up along international lines and give the people of Canada an indication of the origins from which their own tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections include many Old Masters, among which are twelve acquired from the famous Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a growing collection of contemporary art; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection consists of more than 5,000 items. The services of the

Gallery include the operation of a reference library open to the public which contains more than 10,000 volumes and periodicals on the history of art and other related subjects.

The National Conservation Research Laboratory, established in 1964, provides technical information on works of art from public and private collections across Canada and is responsible for the conservation of the national art collections. In addition, research is carried out on the effects of environment on works of art and on the durability of artists' materials.

An active program of exhibitions, lectures, films and guided tours is maintained for visitors to the Gallery in Ottawa. The interests of the country as a whole are served by circulating exhibitions, lecture tours, publications, reproductions and filmstrips prepared by the National Gallery staff. Promotion of and information on art films are handled by the Canadian Centre for Films on Art and their distribution by the Canadian Film Institute. The Gallery promotes interest in Canadian art abroad by participating in international exhibitions such as the Biennials of Venice, São Paulo and Paris, and by preparing major exhibitions of Canadian art for showing in other countries. At the same time, it brings important exhibitions from abroad for circulation in Canada.

Performing Arts Schools.—Music, the most widespread of the performing arts (which also include opera, drama, ballet and dance), is a degree course in a number of universities. The following offer degree courses:—

- Acadia University, Wolfville, N.S.—B.A. with music major, and Mus. B.
- University of Alberta, Edmonton, Alta.—B.A. major and Mus. B.
- Brandon College, Brandon, Man.—B. Mus. (Education)
- University of British Columbia, Vancouver, B.C.—B.A. major and B. Mus.
- University of Calgary, Calgary, Alta.—B. Mus.
- Université Laval, Quebec, Que.—B. Mus.
- University of Manitoba, Winnipeg, Man.—B.A. major and B. Mus.
- Université de Montréal, Montreal, Que.—B. Mus. and D. Mus.
- McGill University, Montreal, Que.—B. Mus.
- Université de Moncton (affiliated Collège Notre Dame d'Acadie), Moncton, N.B.—B. Mus.
- Mount Allison University, Sackville, N.B.—B.A. major
- Queen's University, Kingston, Ont.—B.A. major
- University of Toronto, Toronto, Ont.—B. Mus., M. Mus. and D. Mus.
- University of Western Ontario, London, Ont.—B.A. major
- St. Francis Xavier University (affiliated Collège Mount St. Bernard), Antigonish, N.S.—B.A. major
- Université Saint-Louis, Edmundston, N.B.—B. Mus.
- University of Saskatchewan, Saskatoon, Sask.—B.A. major and B.Ed. music
- Université de Sherbrooke (affiliated Collège du Sacré-Coeur), Sherbrooke, Que.—B.A. major
- University of Victoria, Victoria, B.C.—B. Mus.

Advanced instruction in music is also given at the Conservatoire de Musique et d'Art Dramatique in both Montreal and Quebec. Opera may be studied at the Royal Conservatory Opera School of the University of Toronto where advanced students work in close collaboration with the Canadian Opera Company and also at the Conservatoire de Musique et d'Art Dramatique and the Banff School of Fine Arts (summer) at Banff, Alta.

A Bachelor degree with specialization in drama may be obtained at Queen's University and the Universities of Alberta, Saskatchewan and British Columbia. Advanced instruction is also given during the summer at the Banff School of Fine Arts. The University of Toronto recently announced its first chair of drama, although it does not expect to offer degrees immediately. The University of British Columbia hopes to offer a post-graduate degree in theatre leading to the M.A. Some graduate courses are offered at the University of Saskatchewan and a degree course in drama is available at the University of Alberta. The National Theatre School of Canada offers complete practical training for talented students. It is bilingual, winter courses being held at Montreal, Que., and

summer courses at Stratford, Ont. Three years are required for the acting course and two for technical and production studies. The Manitoba Theatre School at Winnipeg is also of importance.

The National Ballet School at Toronto is the only residential ballet school in Canada. It offers academic studies together with practical instruction. Professional instruction is also offered by two other major Canadian ballet companies, Les Grands Ballets Canadiens, Montreal, and the Royal Winnipeg Ballet, Winnipeg. The Canadian School of Ballet is located in Kelowna, B.C., and advanced ballet training is given during the summer at the Banff School of Fine Arts.

Museums

The museums of Canada, as elsewhere, range from small, locally gathered, historical artifacts and objects to large government-operated institutions which collect, classify and display such objects as may be necessary to study and disseminate knowledge of natural history, human history, science and technology, with special but not exclusive reference to Canada. Many of these larger museums, especially the National Museum of Canada and the Royal Ontario Museum, have a long, distinguished heritage in research and publication of scholarly works and serve an important role as educational and cultural centres. In this area they have an advantage over other agencies of education in that they are able to provide, for study and exhibition, actual, original objects as well as descriptions and pictures of such objects. They offer many educational services to the public through exhibits, guided tours, lectures and scientific and popular publications. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:—

Nova Scotia Museum, Halifax, N.S.
 McGill University Museums, Montreal, Que.
 National Museum of Canada, Ottawa, Ont.
 Royal Ontario Museum, Toronto, Ont.
 Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.
 Museum of the Province of Quebec, Quebec, Que.
 The Manitoba Museum, Winnipeg, Man.
 Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children not directly associated with school work including Saturday lectures and film showings, activity groups, nature clubs and field excursions. At the higher educational level, museum field parties provide research training to university students in many disciplines and museum staffs act as professional consultants, answer a host of enquiries on scientific and technical subjects, and serve as consultants or advisers to foreign scholars and institutions.

For adult laymen, museums offer lectures, film showings and guided tours, the latter usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have conducted regular

radio or television programs and others have made occasional contributions. Some historical museums stage annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

The National Museums of Canada.—The National Museums originated in the Geological Survey of Canada and their early history is inseparable from that institution. The first united Parliament of Upper and Lower Canada met in Montreal in 1841. In July of that year, the Natural History Society of Montreal and the Literary and Historical Society of Quebec petitioned the government to carry out a geological survey. As a result, a resolution was passed in the Estimates of Sept. 10 to defray the expenses of a geological survey of the Province of Canada.

William E. Logan was appointed the first director of the Geological Survey in 1842. He and his assistant, Alexander Murray, undertook their first field work in 1843, and their collections formed the humble beginnings of the National Museums. Logan was much more than a geologist and his interests extended to other branches of natural science. His diaries contain accurate drawings of named plants. He wrote in his annual report for the year 1852-53: "It may be a consideration whether a growing country like Canada could not afford to anticipate what future importance may require in the nature of a national museum and at some future time not far distant, erect an appropriate edifice especially planned for the purpose".

In the meantime, the officers of the Geological Survey continued to collect for the geological museum. In 1856 Elkanah Billings, a palaeontologist and the first of a number of specialists, was added to the staff. Legislation passed that same year to continue the work of the Geological Survey specified the establishment of a geological museum open to the public to exhibit specimens, books and instruments.

In 1874 the practice of recording the number of visitors to the museum was started; from May 1874 to April 1875 the number of visitors was 1,017 and by April 1896 it had reached 31,595 annually. In 1874 the distribution of specimens of minerals, rocks and other natural history objects to schools was started with a donation to the Board of School Teachers of Elora, Ont. The first organized museum lecture program was undertaken in 1912 with a series of lectures for young people after school. By 1915, Saturday morning lectures for children and evening lectures for adults—both features of the museum program today—were in operation. Prior to 1880 the museum occupied several buildings in Montreal, but that year the Geological Survey moved to Ottawa and moved into the former Clarendon Hotel on Sussex Street. Construction of the Victoria Memorial Museum building was started in 1904 and six years later the Geological Survey moved in.

The scope of the museum was enlarged in the Act of Apr. 28, 1877 "to make better provision respecting the Geological and Natural History Survey of Canada and for maintenance of the museum in connection therewith". In that Act the survey was instructed "to study and report upon the flora and fauna of the Dominion" and "to continue to collect the necessary material for a Canadian museum of natural history, mineralogy and geology". As early as the Act of 1856 the Geological Survey of Canada had been authorized to "from time to time" distribute publications relative to the survey. From this authority developed the museum's series of scientific bulletins presenting the researches of its staff.

The Act of 1877 established the Geological Survey and the museum on a continuing basis and permitted the appointment of specialists in natural history. John Macoun was appointed to establish the division of biology in 1882. He was an eminent botanist who had accompanied the expedition of Sanford Fleming to explore Western Canada in 1871. Macoun's report of 1874 laid the groundwork for the establishment of western Canadian agriculture. He also published a catalogue of Canadian birds. In 1895 under the third director of the Geological Survey, George M. Dawson, the museum entered the field of Canadian anthropology.

In 1910 the museum began an expanded program of research and exhibition under the direction of R. W. Brock, then director of the Geological Survey of Canada. Un-

fortunately this program was curtailed during the first World War because the burning of the Parliament Buildings in 1916 forced Parliament to occupy the museum building until 1919. Later, expansion of the exhibition halls was handicapped by the museum sharing its building with the National Gallery of Canada and the Geological Survey of Canada. In 1927 the Governor General in Council gave authority "to designate the museum branch of the Department of Mines as the National Museum of Canada". In 1956 the museum was divided into two branches, the Museum of Natural History and the Museum of Human History. Ten years later, a third branch was formed, the Museum of Science and Technology. On Apr. 1, 1968, the National Museums Act was proclaimed by Parliament which brought the three branches of the National Museum of Canada and the National Gallery of Canada under the National Museums Corporation.

The Act specified a 14-member board of trustees with over-all responsibility for policy and operations of the National Museums of Canada. The Board includes a chairman and vice-chairman, each appointed for a five-year period. The other members are appointed for terms ranging from two to four years each. The new Act also created the position of secretary-general with responsibility for the financial and administrative arrangements of the museums. The names for the three museums were changed—the Natural History Branch became the National Museum of Natural Sciences; the Human History Branch, the National Museum of Man; and the Science and Technology Branch, the National Museum of Science and Technology. The name of the National Gallery of Canada remained unchanged.

Within the next few years it is envisioned that a new National Museums of Canada complex will take shape in Ottawa. In 1968, a director of the building planning was appointed to begin this work. The responsibilities of a great museum include collecting, preserving and storing objects related to the various disciplines within its area of activities. Of equal importance is the research carried out by specialists in these fields and the publication of their findings. Museums exhibit artifacts from their collections in attractively designed displays to illustrate the scientific origins of the various subjects. This however, is only part of a museum's extensive education program, which extends to lectures, publications, enquiries, consultations, workshops, guided tours for children and adults alike, travelling exhibits, loans, library services and radio and television programs. The National Museums of Canada present all these facets for the enjoyment and education of the people of Canada.

The National Museum of Natural Sciences contains the divisions of botany, zoology, geology and palaeontology; the National Museum of Man contains the divisions of archaeology, ethnology, folklore and history, together with the Canadian War Museum; the National Museum of Science and Technology includes the physical sciences and all branches of technology and incorporates the previously existing National Aviation Museum; the responsibilities of the National Gallery are outlined on pp. 364-365. Services common to the four institutions are concerned with exhibition and educational, technical, administrative and financial functions. The 1967-68 staff totalled 312, including five executive, 77 scientific and professional, 23 administrative, 73 administrative support, 83 general technical and 51 operational employees.

During 1967 (latest available figures) the National Museum of Natural Sciences and the National Museum of Man together recorded 332,379 visitors; the National Museum of Science and Technology, 168,217; the National Gallery, 476,026; the Canadian War Museum, 404,953; and the National Aeronautical Collection, 205,748. In all, some 1,500,000 persons visited the four museums.

The National Museum of Natural Sciences.—The 1968 field research program in natural history included a number of expeditions to various parts of Canada and adjacent areas. The work involved investigations of birds in Saskatchewan; ethological (animal behaviour) and zoological (animal) studies of Bathurst Island in the Canadian Arctic in conjunction with the Polar Continental Shelf Projects; a short survey of sand-burrowing

crustaceans (hard-shelled animals) of eastern Florida, studies were continued on the freshwater molluscs of Hudson Bay drainage basin, the region of Chibougamau, Que., and in Austria, Yugoslavia and Northern Italy. In addition, 28 projects on the taxonomy, distribution and ecology of various invertebrate (spineless) animal groups were conducted by Canadian university biologists and students, as well as other biologists, under contract with the Museum. There were investigations of the North American eel; a survey to determine the effects of the tree line on northern fish; a study of biology of crustaceans of lakes in Manitoba; and collection of plants in alpine parts of the Yukon.

Museum staff participated in oceanographic cruises conducted by the Fisheries Research Board of Canada and the Bedford Institute of Oceanography in the eastern Pacific and western Atlantic regions and in co-operative marine biological studies of New England, Chesapeake Bay, eastern Florida and the Caribbean Sea. The new Canadian Oceanographic Identification Centre has sorted and identified zooplankton (marine animals) for other biology laboratories from collections taken along the Atlantic Coast of Canada and from several regions along the Pacific.

Botanical field work included a variety of projects from the Cape Breton highlands to the mountains of Queen Charlotte Islands and the Western Canadian Arctic. There were collections made in three national parks in Nova Scotia and New Brunswick, in British Columbia and in Washington State. Marine algae were also taken along the St. Lawrence River from Kingston to Rivière du Loup and in Prince Edward Island; on Cornwallis Island, N.W.T., and a series of islands in the western Canadian Arctic (Prince Patrick, Banks, Eglinton, Melville and Brock).

Mineralogical operations involved a three-day field trip to northern New York State where augen gneiss (a metamorphic rock) specimens were collected. There was also a week-long project at Bancroft, Ont., for the collection of augite (a rock-forming mineral) and nepheline (a source of silica used for glass making). A new fluorescent mineral display, the largest on the North American Continent, was added to the mineral hall installed in the east wing of the Victoria Memorial building on the main floor.

The education program continued with lectures for adults, Saturday morning programs for children, the junior nature club, the school loan program, children's classes, guided tours, and the national collection of nature photographs.

The National Museum of Man.—Increased activity in field work, research and exhibition was apparent in the Museum of Man's 1967-68 program. This increased activity included not only staff scientists, but contract work involving university personnel and other scholars and scientists in the various fields under the scope of the Museum's jurisdiction. Research, laboratory and office studies were conducted in archaeology, ethnohistory, ethnology, folklore, history, linguistics and physical anthropology.

In 1967 a total of 72 contracts with a value of more than \$300,000 involving many types of research was issued by the Museum. This included research into folk music of several origins, planning of exhibits for the public, the study of native peoples and their language, archaeological investigations from coast to coast and into the Far North, as well as in Alaska. The 1967-68 exhibition program included the opening of two Indian halls—the West Coast Indians and the Indians of the Eastern Subarctic Region. Artifacts from the Museum were lent to other museums and institutions in many parts of the world, including the Hemisfair (Dallas, Texas) and the world Olympics site in Mexico City. Scientists of the Museum also installed exhibits at Man and His World in Montreal, and undertook the planning of exhibits in the Canadian Pavilion at Osaka '70 in Japan.

Staff scientists combined field work with attendance at conferences in various countries. In Canada they were guest lecturers in many centres and served as consultants and advisers to foreign institutions and scientists. They produced both popular and professional articles on their work with the Museum in addition to research papers for professional meetings and seminars.

The Canadian War Museum, which is part of the National Museum of Man, had its beginning in a military museum which was established in Ottawa in 1880, although that museum was closed in 1896 and remained inactive until after the First World War when a committee was formed to find a proper place for Canada's military artifacts. The War Museum Board was established in 1938 and four years later the Canadian War Museum was opened to the public near the centre of the city. In 1967 the Museum greatly expanded its space when it took over a large stone building formerly occupied by the Public Archives. With three floors of exhibition area, it is now able for the first time to show articles of war that have been gathered and kept in storage for decades.

The Museum collects and displays artifacts of Canada's military past on the land, the sea and in the air. Most of the material is Canadian but some is from other countries whose military history has been linked at some time with Canada. Many of the artifacts are gifts from individuals. The oldest article in the Museum is a Viking sword which may date from the last half of the 10th century; the most recent acquisitions relate to the Canadians with the United Nations peace-keeping forces in the Mediterranean area.

Section 2.—The Educational Functions of the Canadian Broadcasting Corporation and the National Film Board

Educational Functions of the Canadian Broadcasting Corporation.—The educational activities of the CBC take several different forms: radio and television broadcasts intended for use within primary and secondary schools; formal instruction courses for adult listeners and viewers; informal educational programming for children and adults; and the production from program material of a variety of publications, recordings and audiotapes.

School Broadcasts.—The CBC has been engaged in school programming on radio since the 1940s and on television since the 1950s. Programs are produced for national, provincial and local broadcast and, in some cases in the western provinces, for regional broadcast. Programs at the national level—Canadian School Broadcasts and Canadian School Telecasts, as they are titled—are designed to enrich rather than directly instruct and are based on elements common to all provincial curricula. They are planned in co-operation with the Canadian Commission on School Broadcasting, which represents the provincial departments of education and the teaching profession, and is composed of ten directors and two working councils, one for French-language and one for English-language programs. The CBC pays the entire cost of national school programs. At the provincial level, programs follow provincial school curricula closely and are planned in collaboration with the various provincial departments of education. They are financed on a cost-sharing basis.

In 1967-68, CBC television carried some 2,500 school programs—national, regional, provincial and local. School radio programs—national, regional and provincial—totalled more than 1,500. National programs on the English networks included series on Canadian writing, history, geography and transportation; current affairs; the physical sciences; careers; the everyday use of French; human communications; and the background and values of English literature. Subjects dealt with on the French networks included geography, forestry, biology, the history of civilizations, the plastic arts, drafting, physical education and art appreciation.

Adult Instruction Programs.—In conjunction with university authorities, the CBC French networks presented series on a range of subjects including Greek and Roman civilization, English literature, economics, economic geography, mathematics, religious sciences, scientific psychology and French literature. At the postgraduate level, a refresher course was presented for medical practitioners. The CBC Research Department conducted a special study of the response of Quebec physicians to this series.

In the field of language instruction, in which a variety of programs have been offered over the years, the CBC's French radio stations in Vancouver and Toronto carried a series of French lessons. CBC Research reviewed and updated their study of an earlier television course of English lessons for non-English-speaking immigrants.

Youth Programming.—CBC radio and television continued to offer special programs of entertainment and information for age groups from pre-school to teens. French programming for young children included stories and fantasy, musical training, kindergarten projects, comedy, adventure series and film cartoons. For teenagers there were science and natural history programs, popular music, youth clubs and activities, and magazine programs reflecting the role of youth in contemporary society. English network programming for children included French for pre-schoolers, songs, stories and puppets, Canadian-produced adventure films and cartoons, and public school quiz competitions. Programs for teens included popular music and variety, student quiz programs, debates and discussions, drama classics, magazine programs reflecting the youthful viewpoint on issues of the day, and special documentaries on the problems and achievements of young Canadians. During the year, special audience research studies were conducted on certain aspects of both French and English youth programming.

Informal Adult Education.—Much of the CBC's general programming is educational in a broad sense—Canadian and international news coverage, live broadcasts of special events and public occasions, and programs of comment, interview, discussion and documentary on public affairs. In addition, certain programs offer informational and educational material in specific fields.

English-language radio programs in 1967-68 included such examples as the 1967 Massey Lectures, *Conscience for Change*, given by Martin Luther King; *Ideas*, offering talks and discussion series on subjects in the arts, the social sciences and philosophy; the *Arts and Science Journal*; the literary series *Anthology*; farm and fisheries broadcasts; *Agenda*, reporting on the activities of professional and other associations; *Indian Magazine*, reflecting the interests and concerns of Canadian Indians; *CBC Metronome*, on music events across the country; *Concern*, in the field of religion and social change; and special broadcasts from public conferences, university forums and teach-ins including the annual *Couchiching Conference*, co-sponsored by the Canadian Institute on Public Affairs and the CBC. *Cross-Country Check-Up*, a national open-line telephone program, directly involved its listeners in discussion of public issues.

On English-language television, special interest programs included the regular *Country Calendar* and *This Land of Ours*, dealing with rural life and natural resources. On a regional basis, special series were again produced on farm technology and management under the title *This Business of Farming*. *Man Alive* reflected changing concepts of religion in modern life. *Extension* presented a 13-week series on modern Canadian poetry. Among the specialized productions of the CBC's arts and sciences section were the Centennial series on *Canadian Wildlife*, and the series *Man at the Center* and *Science and Conscience*, examining a number of scientific subjects in their social and cultural contexts. Teach-ins and forums were televised on a variety of public issues. In the political field, 1967-68 was notable for the very large audiences and interested response to live television coverage of two constitutional conferences, two Canadian party leadership conventions, the first national TV debate among party leaders (a CBC-CTV co-production), and the federal election.

French-language radio offered special interest programs in such fields as literature, science, language, women's interests, music appreciation, labour, and rural life and farming; *Des livres et des hommes*, *Gala de la poésie*, *la Cybernétique et nous*, *la Parole est d'or*, *Fémina*, *Faisons de la musique*, *Capital et travail*, *le Réveil rural*. The open-line telephone format was used very successfully in *Place publique*, dealing with political affairs, and in *le Père Legault*, in the field of religion.

On French-language television, special interest programs included *Langue vivante*, on French usage; *Femme d'aujourd'hui*, reflecting the varied concerns of modern women; regular farm programs such as *les Travaux et les jours* and *les Quatre saisons*, and the special series *Agriculteurs de demain* on technological advances in farming. In the field of arts and letters, there were such programs as *Conférence* and *Visa pour l'avenir*. Music appreciation series included *Initiation musicale*. *Dossiers* presented documentaries on such subjects as news gathering and water pollution. The public forum or talk-in format was used effectively to explore public issues in some editions of *le Sel de la semaine*.

The CBC Northern Service continued and extended its experiment in broadcasting discussions among Indians and Eskimos in their own languages, in co-operation with the Indian-Eskimo Association.

Publications and Audio-Visual Material.—The texts of selected English-language programs—such as radio lecture series and social or scientific television documentaries—are published and sold by the CBC Publications Branch. Some CBC recordings are also produced for public sale, from broadcast material such as the special Centennial programs on Canadian history.

In 1967, CBC Publications extended its operations to include the CBC Learning Systems project—a library of tape recordings from CBC broadcasts, available at nominal charge to educational institutions. The first selection of tapes included various Massey Lectures and material from the *Ideas* series. Depending on response to the project, the range of material may be broadened in the future.

Various Canadian music recordings of the CBC International Service have been made available to the public by arrangement with commercial recording companies. Notable among them is the 17-disc album *Music and Musicians of Canada*.

Contractual and other considerations have limited the availability of CBC educational films for non-broadcast use. During 1968, the possibility of wider distribution was under active study.

Information Retrieval Television is under experiment in several schools, giving teachers on-demand access to audio-visual aids from a remote library. This system is designed to overcome the inflexibility of scheduled broadcasting which places control of programming in the hands of the broadcaster rather than the teacher.

Also in 1968, plans were announced for a joint project of the Ottawa school system, the Ontario Institute for Studies in Education, and Bell Canada, to test an information retrieval system for educational television. Programs would be transmitted to individual classroom screens on request, by coaxial cable from a central audio-visual library. The two-year experiment was expected to start in 1969, and CBC was to be among the contributors to the stock of visual material.

Future Structure of ETV in Canada.—Following government proposals for special legislation on educational broadcasting, the CBC was among those who submitted briefs on the subject to the Parliamentary Committee on Broadcasting in 1968.

Educational Functions of the National Film Board.—The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board produces and distributes filmstrips and still photographs on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages and, whenever possible, foreign-language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16mm. community film program is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. There are more than 700 national, provincial and community film distribution outlets from which thousands of 16mm. prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

A large part of the 16mm. community film audience is reached through classroom showings, indicating progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend is the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

Original films are shown regularly over English-language and French-language television networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16mm. print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England, Paris in France, New York, Detroit, Chicago and San Francisco in the United States, New Delhi in India, Tokyo in Japan and Buenos Aires in Argentina, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with those of Canada, aiding international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

Section 3.—The Canada Council

The Canada Council was created in 1957 by the Government of Canada, to "foster and promote the study and enjoyment of, and the production of works in, the arts, humanities and social sciences". It carries out its task mainly through a broad program of fellowships and grants of various types. It also shares the responsibility for Canada's cultural relations with other countries, and administers, as a separate agency, the Canadian National Commission for UNESCO.

The Council itself is an independent agency which reports annually to Parliament, through a member of the Cabinet, but sets its own policies and makes its own decisions within the terms of the Canada Council Act. It is made up of 21 members appointed by the Governor in Council. The Chairman and Vice-Chairman serve for terms not exceeding five years, and other members for terms of three years. The Council usually meets at least five times a year. The day-to-day administrative work is carried out by a permanent staff in Ottawa, headed by a director and an associate director who are appointed by the Governor in Council.

Income.—The Council's income is derived from three sources. The most important source of income is the annual grant of the Government, which amounted to \$20,580,000 for the year ended Mar. 31, 1969. This is the second year an annual grant has been made, but the policy was foreshadowed by an unconditional government grant of \$10,000,000 made in April 1965. Another source of operating income is the Endowment Fund, of which only the interest may be used and which is expected to yield about \$4,200,000 in 1968-69. The original value of the Endowment Fund, established by Parliament when it created the Canada Council, was \$50,000,000. The Canada Council also receives special funds from private donors, the most noteworthy of which to date was from the estate of the late Dorothy J. Killam, and is expected to amount to \$16,000,000. The funds from private donations are used in accordance with the wishes of the donors.

Assistance to the Arts, Social Sciences and Humanities.—Professional artists, doctoral candidates and members of staff of Canadian universities account for a large share of the Council's assistance. Much of this aid is channeled through the annual competitions, for awards and bursaries in the arts and, in the social sciences and humanities, for doctoral, post-doctoral and leave fellowships. The Council offers other forms of assistance to individual artists and gives extensive aid to arts organizations. Free research in the social sciences and humanities is backed by a rapidly growing program of research grants, and the Council also supports learned publications, meetings and exchanges and research library collections.

In the year 1967-68, the Council devoted approximately \$11,324,000 to the humanities and social sciences, of which \$7,513,000 financed 1,700 fellowships at the doctoral and post-doctoral levels, and \$3,811,000 was applied to grants in aid of research, university libraries, meetings of scholars and artists, visiting lecturers, publication of scholarly works and other forms of assistance. In the arts, the Council spent \$7,125,000, of which \$917,000 was used to finance 235 bursaries and awards, and \$6,208,000 was applied to grants, including about \$1,519,000 for music, \$435,000 for festivals, \$1,707,000 for the theatre, \$1,237,000 for dance and opera, \$1,022,000 for the visual arts and \$288,000 for publications.

Special Programs.—Apart from its own program, the Canada Council administers on behalf of the Canadian Government two programs of cultural exchanges with European countries. Under one of these programs, fellowships and grants totalling \$568,000 were awarded in 1967-68 to scholars and artists from France, Belgium and Switzerland; in

1968-69 the program will be extended to include the Federal Republic of Germany, Italy and the Netherlands. Under the other program of cultural exchanges, the Council administers the funds of the Canadian Cultural Institute in Rome, created in 1967 by an agreement between Canada and Italy. The Institute offers awards totalling \$25,000 a year to Canadian artists and scholars who desire to work or study in Italy.

The Killam Awards of the Canada Council, another of its special programs, were inaugurated in 1967 with funds from the Killam Estate. These awards go to support a few scholars of exceptional ability engaged in research projects of far-reaching significance. Research projects under this program can be in the social sciences and humanities, or interdisciplinary, linking these with any of the physical or biological sciences.

Prizes and Special Awards.—Under its power to “make awards to persons in Canada for outstanding accomplishments in the arts, humanities or social sciences”, the Council awards annually its own Canada Council Medal and the Molson Prize which is financed by funds from the Molson Foundation. It also finances the annual Governor General’s Literary Prizes.

UNESCO.—The Canada Council Act provides for certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. It has accordingly established a National Commission for UNESCO and provides its secretariat and budget. As an agent of the Council, the National Commission co-ordinates UNESCO program activities abroad, and administers a small program in furtherance of UNESCO objectives. In the year ended Mar. 31, 1968, the Council spent approximately \$198,000 through the National Commission for these purposes.

Section 4.—Library and Archive Services

Library Services

The National Library.—The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Act established a National Library Advisory Council consisting of the National Librarian who serves as Chairman, the Parliamentary Librarian and 12 appointed members, at least one of whom must be from each of the ten provinces.

The Library was housed for a long period in inadequate temporary quarters that limited its collections and activities. Construction of a permanent building, designed to accommodate both the National Library and the Public Archives, began in 1963 and was completed in the spring of 1967. The new structure, which has a floor area of 13 acres and was equipped initially with 81 miles of steel shelving, was opened formally by the Prime Minister on June 20. The book collection now consists of 400,000 volumes, supplemented by microcopies of more than 100,000 additional titles. Newspaper files formerly in several locations have been brought together and now form the largest collection in Canada.

The Library compiles and publishes *Canadiana*, a monthly catalogue of new books and pamphlets relating to Canada; 12,000 to 13,000 titles are listed each year.* *Canadiana* includes details of trade publications, official publications of the Government of Canada and the ten provinces, and of films and filmstrips produced in Canada.

The *National Union Catalogue* lists over 9,000,000 volumes in about 295 government, university, public and special libraries in all provinces. New accessions (which numbered over 893,000 in 1967-68) are reported regularly, and the Union Catalogue thus forms a continuously up-to-date key to the main book resources of the country. During the

* A list of 400 selected titles of “Books About Canada”, prepared by the National Library, appears in Chapter XXVII of this volume.

year ended Mar. 31, 1968, the Reference Division was asked to locate more than 60,000 titles, and it is noteworthy that copies of 80 p.c. of them were found in Canadian libraries.

The Library has published a union list of serials in the fields of the humanities and social sciences currently received by Canadian libraries. This list is a first step toward a complete union list of such serials in the humanities and social sciences that will complement the *Union List of Scientific Serials in Canadian Libraries* published by the National Science Library. The Library is also preparing for early publication a retrospective *Bibliography of Canadiana, 1867-1900*, which will list more than 25,000 titles.

The National Science Library.—The National Science Library has two closely related roles—it serves the staff of the National Research Council engaged in pure and applied research, and it serves the entire scientific and industrial community of Canada by supplementing local and regional resources and services.

Plans for developing a central scientific library were proposed as early as 1924 by the Honorary Advisory Council for Scientific and Industrial Research, established in 1916 and now known as the National Research Council (see pp. 388-397). The Library grew slowly until 1928 when the Council's first research laboratories were set up. Since then it has been developed to parallel the growth and expansion of the laboratories and the national interests and activities of the Council with the result that in 1953, under an agreement with the more recently established National Library, the National Research Council Library formally assumed responsibility for national library services in the fields of science and technology. This responsibility was confirmed by Act of Parliament in 1966 (SC 1966-67, c. 26). In 1967, the President of the Association of Canadian Medical Colleges recommended to the Government that responsibility for national services in the medical and health sciences be assigned to the National Science Library. This recommendation endorsed the proposals of a study group made up of the deans of medical schools, medical librarians and representatives from the Medical Research Council and other appropriate government agencies.

The Library's collection, which is doubling in size every ten years, comprised approximately 725,400 volumes by the end of the year 1967-68. The bulk of this material, including journals and other serials, books, pamphlets, and technical and research reports (many in microform), is housed in the main Library with smaller and more specialized collections in eight branch libraries.

The resources of the Library are made available by means of an extensive inter-library loan and photocopying service. For purposes of current awareness, the Library issues twice a month its *Recent Additions to the Library*, and a list of *Serial Publications in the Library* is also issued at frequent intervals through the use of data processing equipment. Reference and research services include answering requests for scientific information, literature searches and the compilation of abstracts and bibliographies, and the identification and location of obscure publications.

The Canadian Index of Scientific Translations, a card index to the location of completed English translations in Canada and other countries, is maintained by the Library. Translations of scientific articles prepared by the Library's Translations Section are listed and made available in Canada and abroad. A complete English translation of the Russian journal *Problemy Severa* (*Problems of the North*) is also prepared by this Section.

The National Science Library is responsible for the publication of the *Union List of Scientific Serials in Canadian Libraries* and the *Directory of Canadian Scientific and Technical Periodicals*.

Public Libraries.—Provincial governments have jurisdiction over public libraries but these are generally administered and regulated by municipal authorities; exceptions are Newfoundland and Prince Edward Island where the provincial governments maintain the public library service throughout the province. Municipal libraries serve the urban population and provincial and regional libraries serve the more widely scattered population. Summary results of the annual public library survey for 1966 are given in Table 1,

with comparable totals for 1965. Circulation of books was 4.0 per capita in both years and current operating payments were \$1.74 in 1966 and \$1.54 in 1965. The full-time staff numbered 3,538 in 1966, of whom 793 or 22.4 p.c. were professional librarians.

University, College and School Libraries.—Libraries in 76 universities and colleges having enrolments of 100 or more students reported more than 12,000,000 volumes in 1965-66. The number of volumes per student increased from 57.6 in 1964-65 to 59.3 in 1965-66 and expenditures per student increased from \$98.89 to \$126.85. The total staff in 1965-66 numbered 3,164, of whom 840 or 26.5 p.c. were professionals.

2.—Libraries in Universities and Colleges, by Province, Academic Year 1965-66 with Totals for 1964-65

¹ Full-time and equivalent.

In 1965-66 only 39.8 p.c. of the reporting 5,414 elementary and secondary schools had centralized libraries. Their total bookstock was 9,998,900 or 5.2 books per pupil served, approximately the same as in the previous year. Payments for books and other library materials ranged from \$1.06 per pupil served in Newfoundland to \$5.88 in Saskatchewan, the average for Canada being \$3.46.

3.—Centralized School Libraries, by Province, School Year 1965-66 with Totals for 1964-65

Libraries in 65 technical institutes and trade schools serving a full-time enrolment of 57,312 students reported a total bookstock of 254,728 volumes in 1965-66; library expenditure was calculated at \$8.39 per full-time student. Also, 11 teachers' colleges (one in Nova Scotia and 10 in Ontario) reported full-time enrolment of 5,727 and total bookstock of 138,696 volumes.

The Public Archives

Provision for the creation of the Public Archives was first made by an Order in Council of June 20, 1872, which appointed an officer of the Department of Agriculture to take charge of historical archives. In 1903, the responsibility for old government records was transferred from the Secretary of State to the Department of Agriculture, and the head of the Archives was given the title of Dominion Archivist and Keeper of the Records. In 1913, the Archives became the Department of Public Archives (SC, 1911-12, c. 4, now RSC, 1952, c. 222). The purpose of the Public Archives is to assemble and make available to the public a comprehensive collection of source material relating to the history of Canada.

The Historical Branch is comprised of four Divisions. The *Manuscript Division* contains manuscript collections and public records, each arranged in groups. Manuscript groups include private papers of statesmen and other distinguished citizens, records of cultural and commercial societies, copies of records in France, England and other countries relating to Canada. Record groups consist of selected records of all departments and agencies of the Government of Canada. The *Picture Division* has charge of documentary paintings, water colours, engravings and photographs relating to people, historical events, places and objects. It also has a heraldry unit and a sound recordings unit. The *Map Division* has custody of thousands of maps and plans pertaining to the discovery, exploration and settlement of this country, as well as topographical maps of Canada. It maintains a large collection of current topographical maps of foreign countries. The *Library* contains more than 80,000 volumes on Canadian history, including numerous pamphlets, periodicals and government publications.

Although documents in the Archives may not be taken out on loan, they may be consulted in the building, and a 24-hour-a-day service is provided for accredited research workers. Reproductions of available material may be obtained for a nominal fee on request and many of the documents in the Manuscript Division are on microfilm which may be obtained on inter-library loan.

The Records Management Branch assists departments and agencies in records management. Its service includes recommendations and advice on scheduling and disposal of records and the provision of the necessary storage, reference service and planned disposal of dormant records on an economical basis. Regional Centres are being established in major cities across Canada.

The Administration and Technical Services Branch attends to the administrative needs of the Archives and provides a technical and advisory service on microfilming to government departments and agencies. Microfilm work is done for departments at cost.

Branch offices of the Public Archives are located in London, England, and Paris, France.

Canada's National Library and Public Archives, recently located in their new building, are repositories of some of the nation's most valued treasures. Here records of the past may be leisurely perused in reading rooms or long periods of study may be carried out in solitude in small private rooms.

Section 1.—Organization of and Expenditures on Scientific and Industrial Research in Canada

The organization and distribution of the research and development effort in Canada are partially the result of certain characteristic problems of this country, especially its large area, its relatively small population and peculiar population distribution, and its unusual industrial structure. However, there are indications that certain major shifts in the previous pattern of effort may be close at hand, caused by the emergence of organizations concerned with science policy questions and the recent general recognition of the growing importance of science and technology to modern society.

Early research in Canada was related mainly to the primary industries. Geological mapping and agricultural research were almost the only areas of scientific activity until the beginning of the present century. In 1898 research and development in the field of fisheries was assigned to an independent honorary board (the Biological Board) which has continued to the present as the Fisheries Research Board. In 1916 the Federal Government set up the National Research Council, the early duties of which were to encourage and stimulate research in the universities and industry. It later undertook research activities with the establishment of its own laboratory system in the late 1920s and early 1930s. A great expansion in scientific research and development took place during the Second World War. The National Research Council assumed responsibility for research and development activity for the three Armed Services and for the development of atomic energy. After the War, in 1947, the Defence Research Board was set up in the Department of National Defence to take over the responsibility for military research

* Sections 1 and 4, Subsection 1 of Section 5, and Section 6 were prepared by the Science Council of Canada.

and development (see Chapter XXVI) and, in 1952, the Crown corporation Atomic Energy of Canada Limited was established to proceed with the development of atomic energy in Canada, and the National Research Council returned to its previous activities. Also, certain other Crown corporations, such as Eldorado Mining and Refining Limited (now Eldorado Nuclear Limited), Polymer Corporation Limited, and Canada's largest national utility, the Canadian National Railways, developed important research programs. In 1960 the Medical Research Council was established in association with the National Research Council.

Until the 1950s, industrial research was slow to develop in Canada, although certain large industries, particularly the chemical industry and the pulp and paper industry, had long histories of successful research and development effort. Through the efforts of the industrial companies themselves and by means of various government-sponsored incentive programs, the industrial research and development effort in Canada has since grown and diversified considerably. In addition, provincial research councils were set up both before and after the War in several provinces, usually for the general purpose of improving the provinces' utilization of their resources and the production efficiency of their industries. Of these, the Ontario Research Foundation and the British Columbia Research Council, although established under provincial legislation, are self-governing institutions engaged in research and development on contract for manufacturers, departments of government and on their own account, and derive their current revenue mainly from sponsored research. Furthermore, the Pulp and Paper Research Institute of Canada (see Chapter XII, pp. 553-554) is the one major research association that operates on a co-operative basis; its operating funds are provided by industry and its facilities by the Federal Government and McGill University, all three vitally interested in ensuring that this industry maintains its competitive position in world markets. Previously, the primary resource base of industry generally was not conducive to the establishment of industrial research laboratories. As well, the degree of foreign ownership of manufacturing companies in Canada undoubtedly had some influence on the development of industrial research, since Canadian subsidiaries of foreign companies had ready access to the research and development results of their parent companies. As a result of the consequent lack of incentives, all but a few of these subsidiaries refrained from establishing their own laboratories and from developing products specifically for the Canadian market. However, to meet the challenge of competition from other countries in the production of sophisticated modern items of manufacture, much of Canadian industry is now significantly increasing its own scientific and technical investigations. The Sheridan Park Research Community, just outside Metropolitan Toronto, is an example of the latest concept for improving the efficiency of and expanding industrial research in Canada. A somewhat similar but more diffuse development took place earlier at Pointe Claire, near Metropolitan Montreal. Industrial research centres of this type facilitate applied research and development activities for the scientists and engineers involved by permitting ready interchange of non-proprietary scientific and technical information and access to a wide variety of instrumentation, equipment and skills. They also provide an attractive environment for skilled personnel, and thus increase Canada's potential for keeping its trained scientists and engineers. At Sheridan Park the research laboratories of nine individual companies are in full operation and there is room for further corporate participants. A Conference Centre has been built and the community members have formed an association to promote and expedite many other mutually desirable arrangements.

A significant element in the training of scientists and engineers beyond the undergraduate level involves the research and development activities undertaken in the universities as part of their program of graduate studies. These research and development activities are related directly to the educational process and are of great importance in the training of the skilled personnel needed for the development of Canada's economy; they have a further importance in that they create centres of basic research in Canada and therefore act as listening posts tuned to the progress of science and technology in other parts of the world.

Thus, there are three main sectors of research and development in Canada—research and development in government, in industry and in the universities. These three elements are covered in some detail in the remainder of this Chapter.

Mechanism for the Federal Science Policy.—In the federal sphere, the ultimate authority for policy on science resides in the Cabinet. To exercise this authority there was established by the Research Council Act (RSC 1952, c. 239, as amended) a Cabinet committee known as the Committee of the Privy Council on Scientific and Industrial Research. This Committee comprises those Cabinet Ministers having departments with major scientific responsibilities and certain other Ministers who have an indirect concern with scientific affairs. These federal departments and agencies advise the Privy Council Committee on the scientific aspects of their own departmental responsibilities and on the organization and support of research required for their own purposes. For many years, the National Research Council, on the other hand, advised the Committee on general science policy, particularly on research in the universities, in industry and in fields not specifically the responsibility of departments or agencies. Then, in 1949, the Privy Council Committee broadened the structure of its advisory mechanism by the addition of an Advisory Panel for Scientific Policy to which the Privy Council Committee could turn for joint advice on the formulation and conduct of government scientific policies. At the present time, the Advisory Panel consists of senior officials from the science-based departments and agencies, with the Clerk of the Privy Council as Chairman and the Director of the Science Secretariat as Vice-Chairman.

In 1964, as a result of the recommendations of the Royal Commission on Government Organization, a Science Secretariat was created in the Privy Council Office with the task of assembling and analysing information on the Government's scientific and technological activities, as well as those of industry, the universities and the provinces, particularly in relation to the activities and concerns of the Federal Government. The Science Secretariat has since also taken responsibility for advising the Department of External Affairs on the selection of Counsellors (Scientific) for placement in certain Canadian Embassies abroad, and on the distribution of reports received from these Counsellors.

In 1966, the Federal Government established the Science Council of Canada. This is an independent body which has the duty of assessing Canada's scientific and technological resources, requirements and potentialities, and making recommendations thereon by the publication of reports. The Science Council is concerned both with research and development and with the use of science and technology in the solution of Canada's social and economic problems. It reports to the Prime Minister and draws its membership from industry, the universities and government. The Science Council has had, since 1968, its own executive arm. For the first two years of its existence, it received professional and administrative support from the Science Secretariat.

In its first two years, the Science Council initiated intensive studies of science and technology in Canada in order to provide a basis for advice on the formulation of policies and plans for the future. Several reports have been published, both background reports and Science Council reports. The background reports include detailed surveys of the upper atmosphere and space programs in Canada, physics research, psychology, the proposal for an intensive neutron generator, and water resources research in Canada. The Science Council reports include those on space, the intense neutron generator, and water resources research. In addition, the Science Council has published a science policy report which includes the recommendation that Canada focus its scientific and technological effort through the creation of Major Programs designed to solve social and economic problems. Such programs include, among others, a space program for Canada, water resources management and development, transportation, urban development, computer applications and scientific and technological aid to developing areas of the world. The Science Council is continuing its study of these and various other possible Major Programs from the viewpoints of cost-benefit, organization, direction and funding.

In 1967, a Senate Committee on Science Policy was formed to consider and report on the scientific policy of the Federal Government with the object of appraising its priorities, its organization, its budget and its efficiency. A number of hearings have been held and the Committee intends to issue a report containing its findings at the end of its investigation.

In addition, as part of its studies of the national science policies of the individual member countries, the Organization for Economic Co-operation and Development (see p. 147) is issuing a review of Canadian science policy which will undoubtedly be of help to those designing Canada's future in this area.

Research and Development Expenditures in Canada.—In the present decade, Canada's gross expenditures on research and development (GERD) have more than doubled (Chart II) and government has remained the major contributor to research and development funds (Chart III). In 1965-66, Canada's "current" expenditures on research and development amounted to some \$524,400,000, divided as shown in Table 1.

GROWTH OF CANADIAN INDUSTRIAL RESEARCH AND DEVELOPMENT

YEARS ENDED MAR. 31, 1957-66

A microwave dryer capable of rapidly extracting unwanted water from everything from glue to plastic sheeting for films is one of NRC's inventions that is being backed for commercial production by Canadian Patents and Development Limited. It is the responsibility of that Crown corporation to license for commercial exploitation the inventions of government scientists.

Section 2.—Research by Federal Government Organizations and Research in Specific Disciplines

Research activities in the various Federal Government departments and agencies have expanded rapidly, at first because of the need for speeding up the production of raw materials, which were long the basis of Canada's export trade, and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements. In addition to the activities of the National Research Council, Atomic Energy of Canada Limited and the Department of Energy, Mines and Resources dealt with in Subsections 2 to 5, there are a number of other federal agencies involved in research, as shown in Table 3, p. 387.

The scientific work of the Department of Agriculture is described in Chapter XI of this volume, the investigations conducted by the Board of Grain Commissioners in Chapter XXI, the specialized work in scientific forest research in Chapter XII, scientific services concerned with Canada's mineral resources conducted by the Department of Energy, Mines and Resources in Chapters I and XIV, investigational work of the Department of Fisheries and the Fisheries Research Board in Chapter XIII, research of the Canadian Wildlife Service of the Department of Indian Affairs and Northern Development in Chapter I, medical and other research conducted by the Department of National Health and Welfare and other agencies in Chapter VI, and the work of the Defence Research Board in Chapter XXVI.

The Department of Indian Affairs and Northern Development operates a permanent scientific research laboratory north of the Arctic Circle. This laboratory, at Inuvik,

N.W.T., has year-round facilities specially designed for arctic research and serves as a base for extensive field studies in the Western Arctic. It can accommodate up to 16 scientists in all fields of scientific endeavour. The operation of the laboratory is in charge of a manager working under the direction of the Chief of the Northern Science Research Group of the Department.

Subsection 1.—Expenditures by the Federal Government on Scientific Activities

Information on the expenditures of the Federal Government for scientific activities is provided by annual surveys carried out by the DBS. Each survey covers the actual costs of the preceding fiscal year and the estimated expenditures of the current year on the scientific programs of the reporting departments and agencies. At present, only activities in engineering and technology and in the physical and life sciences are included, although eventually the surveys will be expanded to include the social sciences. For survey purposes, "scientific activities" consist of research and development, scientific data collection, scientific information, testing and standardization, and scientific scholarship and fellowship programs. Data are also collected on capital expenditures on plant for scientific activities and on personnel employed in research and development.

The total amount spent by the Federal Government in support of scientific activities increased substantially during the period shown in Table 2; annual increases were approximately 19 p.c., 12 p.c., and 23 p.c. The activity of greatest importance is the conduct of research and development, which accounts for over 66 p.c. of the total current expenditures on scientific activities over the four years shown. Research and development, as defined in DBS surveys and reports, includes the performance, administration and planning of research and development by way of intramural activities, grants in aid of research and contracts to other organizations. Grants intended to support the recipient in a research project are considered to be funds for research and development. These grants in aid of research, which formerly consisted largely of grants for research in universities, now include sizable grants, through special assistance programs, for industrial research. Furthermore, some of the expenditures, although current for the Federal Government, are actually used for the capital programs of the recipients.

2.—Summary Statistics of Federal Government Expenditures on Scientific Activities, Years Ended Mar. 31, 1965-68

² Including \$2,300,000 budgeted for the Industrial Research and Development Incentive Act (IRDIA) grants; there is not a real increase in government expenditures of this amount since the IRDIA program replaces the additional allowance of Section 72A of the Income Tax Act.

Table 3 shows the expenditures of various departments and agencies of the Government on scientific activities. In 1966-67, the departments supporting defence and industry accounted for about 23 p.c., the five natural resource departments for 31 p.c., the National Research Council for 19 p.c., the two agencies concerned with atomic energy for 13 p.c., and medical research and training for 5 p.c.

² Including \$2,300,000 budgeted for IRDIA grants. research facilities from the Health Resources Fund.

³ Including grants for medical

The Federal Government is the sole source of funds considered here but it is not the sole performer. Although most of the Government-funded research and development continues to be performed within its own establishments, the Government's support of outside research has increased noticeably during the past four years. The relative expenditures on the Government's intramural program decreased from about 67 p.c. in 1964-65 to about 61 p.c. in 1967-68, while Canadian educational and non-profit institutions received a greater share, which increased by about 38 p.c. over 1964-65. The proportion of Government funds used to support industrial research and development programs varied from 20 p.c. in 1964-65 to a high of 23 p.c. in 1965-66, followed by a decrease to 18 p.c. in 1966-67 and an expected 17 p.c. in 1967-68. Atomic Energy of Canada Limited, the National Research Council, and the departments of Industry and National Defence are the major supporters of industrial research and development contracts and grants, the latter two departments contributing 80 p.c. of the amount spent in 1966-67. The National Research Council, the Medical Research Council and the Department of National Health and Welfare distributed nearly 85 p.c. of all funds for support of research in Canadian educational and non-profit institutions in 1966-67.

³ Including \$2,300,000 budgeted for

It is estimated that a full-time equivalent of about 17,775 persons was engaged in Government intramural research and development in 1966-67. Of these, nearly 5,000 were scientists or engineers. Approximately 39 p.c. of total professional personnel engaged in research and development in 1966-67 were trained in the field of the life sciences, while those trained in the physical sciences and engineering accounted for 37 p.c. and 23 p.c., respectively, of the total number of scientists and engineers. Atomic Energy of Canada Limited, the National Research Council, and the departments of Agriculture, National Defence, and Energy, Mines and Resources employed about 80 p.c. of the scientists and engineers and nearly 85 p.c. of the supporting personnel engaged in research and development.

Subsection 2.—The National Research Council of Canada*

Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the National Research Council. From an initial budget of \$91,600 (only \$50,375 was actually expended) to one of \$101,000,000, the Council has expanded until now it has some 45 Associate Committees studying a wide range of problems, supports the research efforts of 3,483 university scientists and awards 2,455 scholarships, bursaries and postdoctorate fellowships. In recognition of its activities in support of research in the universities during the past 50 years, the Council has established a group of scholarships called the 1967 Science Scholarships, awarded for the first time in that year. These awards are intended to encourage young men and women of outstanding intellectual promise to pursue postgraduate studies and research leading to doctorate degrees in science and engineering in Canadian universities other than the ones from which they obtained their first degrees. It is hoped that these awards will stimulate exchanges between different cultural and geographical regions of Canada, in keeping with the aims of the commemoration of the 1967 Centennial of Confederation.

The planning and integration of research work, organization of co-operative studies, postgraduate training of research workers, and prosecution of research through grants to university professors formed the basis of the Council's work from 1916 to 1924. As early as 1918, the creation of a central research institute to carry on research in pure science in relation to standards of measurement, quality and composition of material, and research in science applied to the industries of Canada, had been urged and a special committee of Parliament endorsed the proposal. Temporary quarters were secured in 1925 and research on magnesian refractories for steel furnaces was carried out so successfully that an industry established during World War I was re-established on a large scale. As a result of this achievement, the Government in 1929-30 provided funds for new research facilities. The National Research Building on Sussex Drive in Ottawa was opened in 1932 and in 1939

* Revised in the Public Relations Office, National Research Council of Canada, Ottawa.

construction was begun on an aerodynamics building located on the Montreal Road, just east of the city. This site now comprises some 400 acres and houses most of the Council's laboratories. A prairie Regional Laboratory built on the campus of the University of Saskatchewan in Saskatoon has been in operation since June 1948 and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax has been in operation since June 1952.

Under the terms of the Research Council Act, the Council has charge of all matters affecting scientific and industrial research in Canada that may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. In discharging these responsibilities, the Council may undertake, assist or promote research. Its duties include the utilization of Canada's natural resources; the improvement of industrial processes and methods; the discovery of processes and methods likely to expand existing industries or to develop new ones; the utilization of industrial wastes; investigation and determination of physical standards, methods of measurement, and fundamental properties of matter; the standardization and certification of scientific and technical apparatus used by government and industry; the determination of standards of quality for materials used in public works and government supplies; investigation and standardization, at the request of industry, of industrial materials or products; and research intended to improve conditions in agriculture. As a service to Canadian science, the Council maintains scientific liaison offices in Ottawa, London, Washington and Paris. The liaison officers abroad also serve as scientific attachés in the Canadian diplomatic missions. The National Research Council Library, with holdings of more than 683,000 volumes in science and technology (including over 15,000 journals and other serials), acts as the National Science Library of Canada (see also p. 376).

The Council's laboratories are organized in ten divisions and two regional laboratories, each with its own director. Six divisions are engaged in applied and fundamental studies in the natural sciences—biosciences, applied and pure chemistry, applied and pure physics and radiation biology. Four others are devoted chiefly to engineering work—building research, mechanical engineering, radio and electrical engineering, and the National Aeronautical Establishment. The two regional laboratories carry out research related to the resources of the Prairie and Atlantic regions. A Medical Research Council, responsible for the support of medical research but functioning under the general administration of the National Research Council, was established in November 1960; it now reports to Parliament through the Minister of National Health and Welfare (see pp. 277-278).

The National Research Council Act at present provides for a President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour, and research in science and engineering. Many of the members are drawn from Canadian universities. The Council reports to the Committee of the Privy Council on Scientific and Industrial Research through a Minister designated by the Governor in Council for the purposes of the National Research Council Act.

The Council's 1967-68 budget, excluding the provision for the activities of the Medical Research Council, was about \$101,000,000, approximately \$45,500,000 of which was required for foundation work—scholarships and research grants in science and engineering. The remainder was used to operate the laboratories and to provide for the Council's industrial research assistance program. Of the Council's 3,039 employees, 890 are scientists and engineers.

Links with Industry.—The application of science to Canadian industry has always been one of the major concerns of the National Research Council. Since 1917, representatives of industry, government and the universities have co-operated, through NRC Associate Committees, in solving pressing industrial and economic problems. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 70 p.c. of the Council's own effort involves applied research intended

for industrial use. Contract research on specific projects and a wide variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited.

A most important activity of the Council is its Technical Information Service which consists of field engineers who visit manufacturing establishments and a staff of trained researchers in Ottawa who use the technical literature available through the Council's library. Although all inquiries are handled, the Service is particularly interested in helping small firms with no research or information facilities. Free advice is given on all aspects of materials and processing, equipment, plant design and packaging and on such topics as wage incentives and inventory control.

Direct financial assistance for research performed by Canadian industry was begun by the Council during 1962. Under this arrangement the Council makes grants supporting long-term applied research and development work proposed and carried out by industry. Aid is given on a shared-cost basis, with industry supplying at least half of the funds for any one project. Companies of all sizes, representing a wide range of industrial activity, are eligible for assistance and the companies retain all rights arising from the work. In 1967-68, at a cost of \$5,700,000, the Council supported 32 new research projects and 123 continuing projects in 90 Canadian firms.

Biosciences.—The program of the Division of Biosciences covers practical problems related to the national economy and fundamental studies that may contribute useful information in such areas as agriculture, medicine and certain industries. Apparatus and techniques for preparing, preserving and storing food make up a large part of the applied work and particular attention has been given recently to food freezing, cold storage in jacketed rooms and refrigerated transport. Study and testing have continued on a process now widely used in industry for the immersion-freezing of poultry, quality loss in poultry meat during freezing and refrigerated storage, and an improved cooling system for frozen food trucks. The physical and chemical reactions influencing coagulation in evaporated milk during sterilization are being investigated. Microorganisms related to food are studied, particularly those that grow in cheese, in high salt concentrations and at low temperatures. Model systems for the study of freshwater microbial ecology are under investigation. A national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

Considerable effort is devoted to questions of animal and plant physiology. Studies of the mechanisms by which mammals, birds and man adapt to cold have provided important basic information on cell, muscle and metabolic activity, and help to explain practical problems such as the high death rate of newly born caribou. Fundamental plant processes such as translocation are investigated, and a study is being carried out on strains of blue-green algae believed responsible for cattle deaths. Plant fibres such as cellulose—the skeletal material of plants—and the structure and function of plant cell components are also examined.

Other studies involve fermentation mechanisms and enzymology, and the structures of proteins, polysaccharides and lipids. One group, among its other projects, is engaged in long-term statistical studies of protein variability in wheat, a factor that influences overseas wheat sales. The work has been expanded recently to include the effects of weather factors on protein content.

Radiation Biology.—The general objective of the Division of Radiation Biology is to undertake fundamental research into the effects of radiation on living things and their components. This is best done by combining the efforts of scientists in several biological disciplines.

To date, biochemical studies have included theoretical studies of radiation doses resulting from internal contamination of workers, the action of X-rays on purified en-

zymes, the action of ultraviolet light on nucleic acid components, and the metabolism of radioactive tellurium in animals. The most prominent causes of death of animals or men from exposure to ionizing radiations are destruction of the blood-forming tissues (spleen and bone marrow) and severe damage to the intestinal wall; in addition, sublethal doses of radiation cause immediate destruction of lymphatic tissues such as the thymus gland. Therefore the Division has devoted considerable effort to investigating the effects of gamma-rays on these three types of tissues.

Applied Chemistry.—The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Although formerly much of the work involved the solving of immediate specific problems, a larger part of the effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results. For instance, a long-term investigation on the contacting of fluids and solids—an operation vital to many chemical engineering procedures—has resulted in a successful commercial operation for drying grain. The same method has been extended to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method was devised for easily separating almost any suspended solid from the liquid surrounding it. The same technique can be used to prepare dense spherical agglomerates of selected composition. Work on separation processes has been expanded to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high pressures—carried on over the past several years—has resulted in the successful preparation of a stable polymer that could not be produced by conventional means. The development of a procedure for anodically depositing metal oxide films resulted from long-term studies on metallic corrosion. These films may have considerable potential as decorative or protective coatings, or to impart desirable electrical properties to the deposited layer.

The 11 sections of the Division are: analytical chemistry, chemical engineering, colloid chemistry, high polymer chemistry, high pressure, kinetics and catalysis, metallic corrosion and oxidation, metallurgical chemistry, physical organic chemistry, hydrocarbon chemistry and textile chemistry. Much of the work falls under the general headings of petroleum or metal chemistry, in that several sections work on topics related to one of these fields.

Pure Chemistry.—The Division of Pure Chemistry has a small permanent staff that works in collaboration with about 50 young postdoctorate fellows from all over the world. The work consists of long-term fundamental investigations in organic, physical and theoretical chemistry designed to provide new basic knowledge.

The work in organic chemistry includes investigations of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of nucleic acids, porphyrins and of compounds labelled with isotopes. Other groups deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, organic crystal semi-conductors, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others investigate the thermal properties of simple solids, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the adsorption of fluids by active carbons. Theoretical studies cover quantum-mechanical and many-body problems.

Applied Physics.—The work in applied physics is divided between research in fields of physics deemed most likely to contribute in a practical way to the Canadian economy

and research to improve the accuracy and precision of fundamental physical standards on which all measurements are based. All the fundamental physical standards for Canada are the responsibility of the Division of Applied Physics, which has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature, photometry and radiation. The sections of the Division are: acoustics, diffraction optics, electricity, heat and solid state physics, high temperature physics, instrumental optics, optical physics, mechanics, photogrammetric research, radiation optics, and X-rays and nuclear radiations.

Examples of specific projects under way include a study of physiological noise and its relationship with the threshold of hearing, resulting in the development of a new probe microphone which should find wide application in sound measurement; new precision and accuracy are envisaged for audiometers of great importance in connection with hearing loss in industry and elsewhere; researches directed toward improving the resolving power of optical systems, the design of a hydrogen maser offering potential as a frequency standard for defining time, measurements on various metals and ceramics aimed at elucidating the mechanism of heat transfer at high temperatures, the establishment of an international standard neutron source, and investigation and application of the very intense and very monochromatic radiation emitted by gas lasers. Several of the Division's developments are being produced commercially; among these are noise-excluding ear defenders, a revolutionary analytical plotter for making maps from aerial photographs (available in two models—one for military and the other for civilian use), six- and five-figure potentiometers, a precision direct-reading thermometer bridge, an instrument for measurement of resistance to a precision of one part per million, and a new instrument for measuring more accurately and quickly electrical voltages of up to 3,000 volts.

To permit standardization of X-rays and nuclear radiations at higher energies and for general research in the energy range, the Division has installed a 4-MeV Van der Graaff generator and a 40-MeV linac facility which went into full operation in 1968.

Pure Physics.—Investigations are under way on cosmic rays and high-energy particle physics, solid state physics, laser and plasma physics, spectroscopy, and X-ray diffraction. The work is on fundamental problems which do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Important advances in the study of cosmic rays and energetic particles are being made by means of a specially designed instrument package operating aboard the Canadian earth satellite *Alouette II*. The package is sending back vital new information about the Van Allen radiation belts and about the artificial belts created by atomic explosions.

The solid state group studies the electrical, thermal and mechanical properties of metals and semi-conductors especially at very low temperatures. The laser and plasma physics group, established in 1962, has already made an important contribution by observing the scattering of a ruby-maser beam by a plasma. This study leads to a determination of electron temperature and electron concentration. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultra-violet spectra, and considerable work has been done on optical masers.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. Two of the major projects concern narcotics and vanadium minerals. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material.

Building Research.—The provision of a comprehensive research service for the construction industry of Canada is the primary concern of the Division of Building Research. Its program therefore covers various aspects of construction, building design, building materials and components, fire research, and studies in soil, snow and ice mechanics; it also serves as the technical research wing of the Central Mortgage and Housing Corpora-

tion. To assist in the research and information functions of the Division, Regional Stations are located at Halifax, N.S., Saskatoon, Sask., and Vancouver, B.C. An Information Office is located at Toronto and field stations at Thompson, Man., and Inuvik, N.W.T.

Division projects are concerned with: the behaviour of cement, concrete, mortars, plasters, plastics and sealing and caulking compounds; atmospheric corrosion of metals and paint research; acoustics research; the over-all performance of foundations, walls, windows and roofs; humidity in buildings; air-conditioning design; snow and wind loads on structures; the properties of various soil types including permafrost and muskeg; and the effects on buildings of ground vibrations caused by earthquakes. A fire research laboratory contains facilities for studying the initiation, development and extinguishment of building fires as well as for fire tests on materials and structures.

Because concentration is placed on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. Double-glazed windows and lightweight metal and glass curtain walls, used increasingly in modern buildings, have been examined, improvement of winter building techniques has been studied, and the work of one section is devoted to problems of building in the Far North. Educational work is conducted in a number of directions to alert the designers, manufacturers and others to new principles and new information as well as to design features that should be avoided. Similar liaison exists with federal and provincial public works departments and many useful field studies have been made on public and privately owned buildings.

Many results of the Division's research are used in the improvement of the National Building Code, an advisory document offered as a model building by-law, and now used by municipalities accounting for about three quarters of the urban population of Canada. The Division also provides the secretariat and considerable technical assistance to the Associate Committee that produces the Building Code on behalf of the National Research Council.

Mechanical Engineering.—Although this Division of the National Research Council is concerned broadly with problems in mechanical engineering, the form of current developments in Canada naturally requires a reasonably sharp specialization within the broad field. Despite pressure in the engineering world for immediate results, it is essential that this type of work be supported by a substantial foundation of general research.

In the present vigorous stage of engineering development in Canada, the general work of the Division is being related to the thermodynamic aspects of engineering production by conventional machinery and by application of fluid mechanical principles to the generation of extreme temperatures in high-pressure gases. In support of the human contribution to higher productivity, the other general body of work relates to the behaviour of the human operator—his dexterity and capability and the effects on his performance of fatigue, lack of sleep, and alcohol. The more specific activities of the Division are related to processes of production and to transportation.

In view of the enormous importance in Canada of the lumbering industry, and the corresponding economic advantages of saving waste wherever possible, some work is in hand to assess the sawing of lumber by means of high-pressure water jets.

In the manufacturing aspects of mechanical engineering, the Division has long been active in the solution of problems—both thermodynamic and mechanical—of the different kinds of heat engines and is concentrating on matters particularly pertaining to diesel engines and gas turbines. In its experimental shops it is introducing improvements and refinements in a number of manufacturing processes, such as the precision grinding of gearing, electrodischarge machining and electrochemical machining, which experimental work may prove of interest and use to various manufacturers. As a subsidiary part of the work on manufacturing techniques, the Division has in hand a substantial body of development work related to the improvement of surgical instruments and apparatus, the first of which is now going into commercial production.

Because of the importance of all forms of transportation of primary consequence to the economic and social well-being of Canada, substantial research in this direction has been conducted for a number of years. The land transport work has arisen from problems with urban bus systems and with railway operations and includes programs relating to the operation of diesel locomotives on a wider range of fuels, to the improvement of air brake operation in winter, to the braking and running smoothness of long trains, and to the improvement of remote switching necessary for central traffic control. In the area of sea transport, the Division is concerned with ship design and canal and harbour facilities arrangements. A steady procession of new ship designs passes through the ship laboratory for investigation of hull lines, propeller design, steering and rough water characteristics, supplemented by a program of work at sea on the stresses on ships running in rough water. Work is under way on a model of the St. Lawrence River extending from Montreal to Father Point, the object of which is to lend the maximum possible scientific impetus to the development of the Port of Montreal. The activities of the Division in the field of air transport are currently concentrated on acquiring a reasonably wide-based and intimate knowledge of the possible machinery arrangements for civil vertical take-off aircraft, which are believed to represent one of the great aeronautical opportunities of the future.

Since many of the Division's facilities are not duplicated elsewhere in Canada, the Division assists manufacturers with the testing of a great variety of products.

National Aeronautical Establishment.—The National Aeronautical Establishment conducts aeronautical research to meet the needs of military and civil aviation, working in co-operation with the Canadian aircraft industry; it also carries out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics. It has the only development wind tunnel facilities in Canada and is thus equipped to handle most of the industrial or military aircraft developments of the foreseeable future. Aerodynamics research from low speeds up to about 17 times the speed of sound is carried out in the wind tunnels; considerable attention is being given at present to low-speed problems of vertical and short-take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the theory of structures, fatigue and fracture, flight loads statistics and aircraft hydraulics. The flight mechanics program covers research on flight safety and flying stability and control, the development of a crash position indicator for locating crashed aircraft, atmospheric physics and anti-submarine magnetometry.

A growing and highly diversified program of assistance to smaller industries is developing, the work relating mainly to product development, product improvement or testing. Concerning aircraft utilization, efforts have been directed toward those areas of national activity where aerial methods might offer economies in cost or improvements in effectiveness, such as agricultural applications, forest fire fighting, aerial logging, high sensitivity magnetic surveys, precipitation physics, and studies of atmospheric turbulence.

Radio and Electrical Engineering.—This Division conducts engineering projects of interest to Canadian industry and fundamental research in electrical science. The engineering program in the high-voltage field includes studies of corona loss and radio interference from direct-current transmission lines, and the development of current comparators for very accurate measurement of current and voltage ratios. The Division gives assistance to Canadian industry in the design, production and evaluation of new equipment, and in the solution of such engineering problems as the design of antennas, microwave film and paper dryers, and electronic aids to navigation, including a radar for operation in narrow waterways.

A recently developed radar altimeter, to be used in taking inventory of forests by photogrammetry, has now been adapted, at the request of the Food and Agriculture Organization of the United Nations, for use in tropical rain forests. In the field of bio-

The National Research Council's new wind tunnel at Uplands Airport, Ottawa, as it neared completion in early 1969. It will be used by the Canadian aircraft industry and NRC for research and development of all types of aircraft as well as for other structural and mechanical testing.

medical engineering, new techniques in electrocardiography that have been successfully tested in clinical practice will allow reliable monitoring of a fetal heartbeat. The Division has co-operated with members of the medical profession in the establishment of safety standards in the use of electronic treatment and diagnostic equipment in hospitals.

With the increasing use of computers in all branches of science the work of the Division has become increasingly concerned with the development of computer techniques and their many applications. In one such project the problem of communication between man and machine is studied, and in another the application of computers to education is being investigated. A computer-aided teaching system has been developed, the usefulness of which is being tested by a course unit set up for beginning geography students.

Model of C1-215, designed primarily for water bombing of forest fires, undergoing wind-tunnel tests. The structure has a working section for testing model aircraft with wing spans of up to 20 feet.

The Algonquin Radio Observatory operated by the Division has facilities that include a multi-element interferometer used for solar observations, and a 150-foot parabolic radio telescope. Since its completion in 1966, astronomical measurements have been made with this telescope with a degree of accuracy not previously attainable, and many observation programs have been initiated at the observatory, not only by National Research Council scientists but by astronomers from Canadian and foreign universities.

Fundamental studies are also carried out in the fields of upper atmosphere research, wave propagation, solid state physics and the behaviour of particles at ultra-high vacuum.

Space Research Facilities.—The function of the Space Research Facilities Branch of the National Research Council is to develop and provide facilities to meet the needs of the upper atmosphere and space research programs of Canadian scientists in universities and government agencies (see pp. 404-407). At present its work is restricted primarily to the use of sounding rockets. The Churchill Research Range which is operated for the benefit of Canadian and American scientists and has a joint Canadian-American funding is the major launching facility. It has capabilities for launching many kinds of sounding rockets and balloons carrying scientific experiments to investigate the earth's upper atmosphere and also associated ground-based instruments to study the aurora borealis by photographic and spectro-photometric methods. The Branch maintains, for occasional use, a small launching facility at Resolute Bay in the Northwest Territories and temporary launching facilities will be set up at other locations in Canada to be used for specific studies associated with the eclipses of the sun in 1970 and 1972. The Branch operates a satellite tracking and data reception station near St. John's in Newfoundland and the Great Whale Geophysical Station at Poste de la Baleine in Quebec.

The implementing of the sounding rocket program, for which the Branch is generally responsible, includes the provision of the vehicles and the incorporating of the scientific experiments into suitable payloads, with associated telemetry and other devices, most of which work is carried out by industrial contracts. Branch work also includes the reduction of flight data to provide vehicle trajectory and attitude information to experimenters and the provision, from the telemetered information recorded on magnetic tape, of data required by individual scientists in any form desired.

Atlantic Regional Laboratory.—The Atlantic Regional Laboratory is engaged in practical and fundamental studies in chemistry and biology, which are related to the resources and industries of the Atlantic Provinces. Such studies include investigations of: the biochemistry and physiology of marine algae, fungi, bacteria, lichens, mosses and higher plants; the chemistry of naturally occurring organic compounds; and the physical chemistry of inorganic compounds at high temperatures. A major objective is to develop varieties of seaweeds with enhanced commercial value and to investigate the growth and cultivation of seaweeds and other marine algae. Surveys are being made to reveal new sources of seaweeds. An applied project on toxic microfungi in pastures is being carried out in collaboration with the Canada Department of Agriculture at Nappan, N.S. Fundamental studies on inorganic reactions at high temperatures are expected to give information of value to the steel and glass industries. Research in organic reactions includes work on methods of synthesis which may eventually have industrial value. Some of the work in biochemistry and physiology is related to medicinally important compounds such as antibiotics and drugs that affect mental processes.

Prairie Regional Laboratory.—One of the aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies by determining potential uses of crops now in production and by encouraging the production of new crops to meet specific needs. The Laboratory program is carried out by five sections: physiology and biochemistry of fungi, physiology and biochemistry of bacteria, plant biochemistry, chemistry of natural products, and engineering and process development. Research is therefore carried out on the properties and reactions of plant components, and on the biological,

chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents, such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up for the systematic study of extractives from local plants and shrubs.

Developments from the Laboratory attracting commercial interest are: the production of feed supplements by direct use of microorganisms, and specific essential amino acids such as lysine; poly-hydroxy alcohols such as glycerol and arabitol; hydroxy fatty acids; and the possibilities of producing specific glyceride types using the enzyme systems of microorganisms. The Laboratory works in co-operation with the Canada Department of Agriculture to help maintain Canada's position as the world's leading exporter of rapeseed, used to produce cooking oils, dressings and oil for use in margarine and shortening. A group working in the field of mycology is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

Subsection 3.—Research in the Atomic Energy Field*

Recent Developments and Prospects.—Over the past few years a major change of outlook has come about in the atomic energy field that confirms and strengthens the Canadian research and development program. Previously, the major objective was to develop nuclear electric generating stations that would compete with stations burning coal or oil, an objective met when The Hydro-Electric Power Commission of Ontario (Ontario Hydro) undertook to construct the large nuclear station at Pickering near Toronto. This came in parallel with the decisions of many utilities in the United States to build nuclear stations that promise similarly to be economically competitive. The new outlook is the recognition that nuclear power costs can be made much lower if on a large scale, and that it will become economic to use such low-cost power to desalt water, to produce fertilizer and to change other industrial chemical and metallurgical processes. Canada's line of heavy water reactors modified to use both thorium and uranium fuel together continue to hold outstanding promise for the new objective in comparison with all others.

Ontario Hydro has announced its decision to construct another nuclear station for 3,000 megawatts (one megawatt = 1,000 kilowatts) comprising four units of 750 megawatts each, in addition to completing the station at Pickering with its four units of 500 megawatts each, scheduled to go into service in the period 1971-73. Power from the Pickering station is estimated to cost less than 4 mills (0.4 cents) per kilowatt hour.

The Quebec Hydro-Electric Commission (Hydro-Québec) has also entered the nuclear field with a 250-megawatt prototype nuclear generating station of advanced design which will make it the first of its kind in the world. The station (named Gentilly) is being built near Bécancour, Que., and is to be commissioned in 1971. Like the earlier CANDU (Canadian Deuterium Uranium) reactors, the design employs natural uranium as the fuel and heavy water as the moderator, but the heat will be carried from the fuel by boiling ordinary water instead of by heavy water at a pressure sufficient to prevent boiling. The design is distinguished by the title CANDU-BLW-250 (Canadian Deuterium Uranium-Boiling Light Water-250 megawatts).

The first nuclear power demonstration (NPD) reactor, CANDU-PHW-20 (Pressurized Heavy Water-20 megawatts) at Rolphton, Ont., has continued to show that capacity factors well in excess of 80 p.c. throughout a full year can be achieved with this

* Prepared (September 1968) by Dr. W. B. Lewis, Senior Vice-President, Science, Atomic Energy of Canada Limited, Chalk River, Ont.

type of system. Indeed, the station, the capacity of which has been raised to 23 megawatts following modifications to the turbine, achieved a capacity factor of 99.96 p.c. during the winter of 1967-68. Fuel-changing occurs routinely with the reactor at power.

With the successful commissioning of the next reactor in the series, the 200-megawatt station at Douglas Point, Ont., the role of NPD changed and the Douglas Point station has assumed the power-demonstration function. NPD will henceforward find increasing use as an experimental facility. Work continues on the long-term behaviour of reactor materials and the reactor is being converted to the boiling mode of operation of the heavy water coolant. The station will, however, continue to supply electric power to the grid and to act as a training base for those who will staff the larger reactors now being built in Canada and abroad.

Canadian heavy water power reactors are also under construction in India and Pakistan. To meet the large demand for heavy water that these reactors will necessarily create, a plant to produce 400 tons a year is under construction at Glace Bay, N.S., and another plant of equal capacity is under construction at Port Hawkesbury, N.S. When both plants are producing to their rated capacity, Canada will be the world's leading producer of heavy water, but further capacity will be needed.

Nuclear power is expected to restore the world market for uranium, with the major build-up occurring in the 1970s. The high energy yield from the fission of uranium is the key to economic nuclear power. The yield is so high that the cost of the raw uranium is a very minor component of the cost of electric power. It is about 5 p.c. of the total and may be contrasted with 50 p.c. or more paid for coal in some large conventional generating stations. The largest component in the over-all economy of nuclear power systems is reactor plant construction and a minor (7 p.c. to 12 p.c.) component is fuel fabrication.

In the past, the major atomic energy activity in Canada was uranium mining and refining for export in support of military uses. Circumstances have changed so greatly that the Federal Government is following a policy of no further exports for nuclear weapons but is encouraging export for peaceful purposes such as nuclear power subject to negotiated safeguards. It is also significant that, since lower unit power costs result from larger stations, there is a new incentive for large utilities to export power from their systems and to interconnect centres of load by high-voltage transmission even over long distances.

The first commercial food irradiator using Cobalt-60 radiation is in operation near Montreal, Que. Canada supplied and installed Europe's largest medical products sterilization plant in West Germany and designs are in hand for the world's first in-hospital unit to be installed in a new hospital in London, Ont.

A major advance in instrumentation, precision gamma-ray spectrometry, based on specially prepared germanium crystals pioneered at Chalk River, is revolutionizing many techniques, particularly isotope and element analyses by radioactivation by neutrons.

Organizational Arrangements.—Three Federal Government organizations have the basic responsibilities for atomic energy in Canada: (1) the Atomic Energy Control Board (AECB), responsible for all regulatory matters concerning work in the nuclear field; (2) Eldorado Nuclear Limited (ENL) (previously the Eldorado Mining and Refining Limited) with a double function as a producer of uranium and as the Government's agent for the purchase of uranium from private mining companies; and (3) Atomic Energy of Canada Limited (AECL), concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as Cobalt-60 beam therapy units for the treatment of cancer, and large installations for the sterilization of medical supplies and other uses. In addition to these agencies, the Radiation Protection Division of the Department of National Health and Welfare (see p. 277) plays an increasing role in ensuring the safe use of radioisotopes and X-rays as well as monitoring radioactivity in public water supplies and the environment from all sources.

A small vial of cobalt, when "cooked" in an intense field of neutrons, becomes Cobalt-60 which, when placed in the head of the Theratron-60 therapy unit in the background, destroys cancerous tissue by radiation.

Radio therapy units ready for shipment at the South March plant of Atomic Energy of Canada Limited. More than 600 units have been sold in 48 countries—well over half the cancer radiation equipment used around the world.

AECL does not itself conduct research but it gives substantial grants to universities to further independent studies and to provide the equipment without which the universities would find it difficult to train the nuclear research workers of tomorrow; in 1966-67 they totalled \$2,500,000. The National Research Council also has made grants in the atomic energy field.

ENL operates research and development laboratories in Ottawa and uses them to support its uranium mining and processing at Beaverlodge in northern Saskatchewan and its refining plant at Port Hope, Ont. ENL co-operates with the Department of Energy, Mines and Resources, which carries out background research on the production and use of uranium.

AECL has an 11-man Board of Directors, including individuals from power companies, private industry and the universities. The company's major establishment, the Chalk River Nuclear Laboratories, is near Chalk River in Ontario, and a second laboratory, the Whiteshell Nuclear Research Establishment, is near Pinawa in Manitoba. The company's Head Office and AECL Commercial Products are in Ottawa. AECL Power

Projects, located at Sheridan Park near Toronto (see p. 381), direct the engineering of power reactors and nuclear generating stations and operate as consulting nuclear engineers. Acting on a proposal by Canadian General Electric Company Limited, AECL agreed to the merger of CGE's nuclear power system design and engineering group with that of AECL Power Projects. Effective in July 1968, the agreement extends over a period of five years with appropriate arrangements for cancellation.

The design and construction of NPD, the demonstration plant, was carried out by collaboration between AECL, the Canadian General Electric Company Limited and Ontario Hydro. AECL Power Projects, with the assistance of Ontario Hydro, designed and constructed the Douglas Point station, which plant, by agreement, will be purchased by Ontario Hydro when it is in satisfactory operation. A similar arrangement between AECL and Hydro-Quebec is being used for the construction of the CANDU-BLW-250 station. The large units of the Pickering station are being built by Ontario Hydro using AECL Power Projects as consulting nuclear engineers.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations, many technical groups in other countries. For example, the Canadian General Electric Company designed and constructed WR-1, an organic-cooled experimental reactor, for the Whiteshell Nuclear Research Establishment on a fixed-price negotiated contract. The CGE and Canadian Westinghouse companies are established in the field of fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Orenda Limited, Dilworth, Secord, Meagher and Associates, Bristol Aero Space Limited, Montreal Engineering Company Limited, Shawinigan Engineering, Surveyor, Nenniger and Chenevert and others. The last three organizations named have formed a consortium, under the title Canatom, for the purpose of providing consulting engineering services in association with AECL in bids for foreign nuclear power reactor business.

In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the opportunity arises, leaving AECL free for fundamental studies and developing new reactor concepts. For some years AECL expects to continue a consulting engineering role in the design of nuclear generating stations. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems.

To support their activities in this field, both industry and universities need ready access to information. This was one reason why industry set up the Canadian Nuclear Association, a body that has held a highly successful series of annual conferences at which both progress and the prospects for the future are reviewed. Detailed technical information is available principally from the library of the Chalk River Nuclear Laboratories, which lends about 725 items a month from its comprehensive collection of the world's nuclear literature. Information is also distributed from extensive depository collections at the libraries of the University of British Columbia, McMaster University, the National Research Council and from seven smaller collections located across Canada.

In the international field, close ties are kept with the United States Atomic Energy Commission (USAEC) and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. There is an agreement with the United States for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the United States to undertake research and development related to reactors of Canadian design. Collaboration has also been established with the International Atomic Energy Agency, the Organization for

Economic Co-operation and Development, and Euratom, as well as with Australia, West Germany, India, Italy, Japan, Pakistan, Spain, Sweden, Switzerland, the Soviet Union and, less formally, with Denmark, France and Norway.

In India a major experimental reactor—the Canada-India Reactor—similar to NRX at Chalk River was constructed and was formally inaugurated in January 1961. Two 200-megawatt units similar to that at Douglas Point are being constructed in India on a co-operative basis, known as the Rajasthan Atomic Power Project (RAPP). India has announced plans to install two more units on another site near Madras. A 125-megawatt station for the Karachi area is under construction by the Canadian General Electric Company on contract from the Government of Pakistan.

Research and Research Facilities.—At the Chalk River Nuclear Laboratories, basic and applied research is carried on by about 300 professional scientists and engineers supported by 350 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, reactor fuels, radiation chemistry, materials science, environmental radioactivity, physics of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, a new tandem Van der Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, electron microscopes, multi-channel pulse analysers, automatic recorders, and analogue and digital electronic computers.

Basic research is carried on in many fields, especially that of the structure of atomic nuclei and of the interactions of neutrons, not only with individual nuclei but also with liquids and crystalline solids, particularly those involving energy transfer. For nuclear structure studies, an earlier tandem Van der Graaff made pioneer work possible by providing multiply charged ions of precisely known energy and direction. It has proved possible to produce nuclei in specific energy states by different routes and to identify and analyse the states, thereby deducing the spin and other characteristics and discovering, for example, three correlated series of rotational states in the nucleus neon-20. Not only is this important to a basic understanding of nuclear structure but it also finds application in unravelling the complex of nuclear reactions responsible for the genesis of nuclei in the interior of stars. With the new tandem Van der Graaff rated at 10,000,000 volts on the terminal replacing the former machine that attained 7,000,000 volts, it is possible to study reactions between heavier and more complex nuclei.

Studies of neutron interactions with matter are made possible by the intense beams of neutrons available from the NRU reactor. By monitoring the neutrons in cosmic radiation, it has been possible to find correlations with the occurrence of solar flares and contribute to the recent advances of knowledge of phenomena in interplanetary space. Isotope techniques have brought about revisions in the basic theory of chemical reactions induced by radiation. This basic research is finding a useful application in the technology of various coolants in nuclear power reactors.

The research facilities of the NRX and NRU reactors have continued to attract individual scientists as well as teams from universities and from other countries. More facilities for studying radiation damage and its effects under closely controlled conditions have come into use. These include devices for measuring creep of metals under stress and fast neutron bombardment at controlled temperatures.

The growing use of lithium-drifted germanium detectors for precise measurements of gamma-ray energies has led also to more extensive electronic digital data-processing. For this and other reasons, the main computing facility will be augmented with new equipment.

The first major installation at the Whiteshell Nuclear Research Establishment (WNRE) is the organic liquid-cooled heavy-water-moderated experimental reactor WR-1. With the high coolant temperature of 345 °C, this reactor has achieved a remarkable record of operation and zirconium alloys are proving quite adequate to contain the coolant. The facilities of WR-1 are quite extensive and can be applied to development work also with other coolants such as boiling water and superheated steam. Laboratory facilities at

WNRE are specially suited to studies of the effects of radiation on materials and a wide program from molecular biology to radiation chemistry and reactor engineering is developing.

Atomic energy or nuclear science is spreading out into so many fields of technology and daily life that the boundaries are becoming diffuse. For the purposes of this review, the field is restricted to all those activities that are conducted only under an order from the Atomic Energy Control Board. This field includes all uses of radioisotopes, including natural uranium and thorium, at significant levels of activity and the operation of all machines capable of producing such isotopes and highly penetrating radiations.

Radioisotopes are widely used in medical research and diagnostics including forensic studies and in biological research in universities, hospitals, research institutes and field stations. They are also used in well-logging and in analyses of geological and mineral samples.

The radiations from isotopes, especially Cobalt-60, are used for sterilization of packaged and sealed medical supplies, for cancer therapy and for food sterilization. Since the Cobalt-60 radiations are not capable of producing neutrons or secondary radioactivity, the products from these operations require no subsequent radiation control and therefore lie outside the atomic energy field. The irradiators themselves are controlled by the AECB.

Multi-million volt particle accelerators are capable of and sometimes used for producing radioisotopes at high activity levels, so both the machines and the products come under AECB regulation. Several new accelerators have been introduced recently in university research laboratories. There are electron linear accelerators at the Universities of Saskatchewan and Toronto. The Université de Montréal has taken over the Tandem accelerator from Chalk River and a similar machine has been installed at McMaster University. Of the older accelerators, the cyclotron at McGill University in recent years has been used extensively for nuclear physics and nuclear chemistry and among the results obtained was the discovery of several nuclei that emit protons in their radioactive decay. The nuclear reactor at McMaster is used extensively in a wide range of research and for graduate training in nuclear physics.

Nuclear Power Development.—Much of the success of the CANDU series of reactors is attributable to the engineered design of the fuel tested in many experimental irradiations under conditions that are more exacting than normal service. The fuel is uranium dioxide, specially prepared from natural uranium entirely in Canada. Strings of pellets of sintered oxide are charged into thin-walled zirconium alloy tubes. The tubes deform slightly in service in a determined manner that has proved satisfactory. The migration of the fission product atoms, especially the gases, has been studied extensively and satisfactory operating conditions have been established for the full energy yield of 9,000 megawatt-days per ton of uranium and more.

This energy yield is so great that there is no need to make provision for processing the spent fuel and the prospective fuelling cost is 0.7 mill (0.07 cent) per kilowatt hour of electricity. This cost may be compared with about three mills from coal at \$8 per ton. The low fuelling cost is most important because Canada has access to such an abundance of coal, oil and natural gas that the competitive cost-level for thermal power is lower than in many other countries.

An evaluation was presented at the third United Nations Conference on the Peaceful Uses of Atomic Energy held at Geneva in September 1964 of cost estimates of several preliminary designs of large power reactors using heavy water as moderator. These designs represented types for which development work was well advanced. The differences lie in the choice of heat transfer fluid or 'coolant' and the steam cycle. Basically, there are three coolants—heavy water, ordinary or light water, and an organic liquid.

The heavy water could be under pressure to prevent boiling or to allow some boiling. Light water would have to boil or be in the form of 'fog' or 'wet steam'. The organic liquid

¹ NRX is essentially duplicated in the Canada-India Reactor, near Bombay, India, which started up in 1960.

² The CANDU-PHW-200 design is also employed in the Rajasthan Atomic Power Plant in India, where the first reactor is scheduled to start up in 1968.

³ CANDU-PHW stands for "Canadian Deuterium Atomic Power Plant in India, where the first reactor is

may simmer but not boil. All types have excellent economic promise and it was decided to develop the boiling light-water type chiefly for two reasons. By taking the steam direct to the turbine, a boiler or heat-exchanger is eliminated and the efficiency is raised. The second advantage is a relaxation of the strictness of control of leaks needed with hot heavy water, both because of its cost and because of the toxicity of the tritium it contains.

The low fuelling cost derives as much from the details of the designs proposed as from the choice of heavy water as the moderator. Extensive development has been applied to reduce the fabrication cost of the fuel; a recent \$9,000,000 order at a price including the uranium and zirconium of \$44 per kilogram of uranium fulfils the predicted estimates while leaving still further promise of lowering the cost as the scale of production increases.

Particular attention is paid in reactor design to minimize the wastage of neutrons by reducing the amount of absorbing structural material. For example, in the NPD reactor the tubes forming the fuel channels have 3.25 inches inside diameter and walls 0.163 inch thick, whereas the four-inch diameter tubes in the Gentilly reactor will be of an improved zirconium alloy and only 0.095 inch thick. The capital cost per kilowatt is also being reduced by building reactors and turbines of larger capacity, by simplification and repetition of designs as well as by increased fuel ratings. The cost of heavy water is also falling as modern plants of large capacity come into production.

Most of the development work centres on establishing the properties of materials for the arduous environment of high temperatures, and radiation effects affecting the solids and the fluids. In ordinary engineering, the three parameters of stress, temperature and time lead to complex analyses, especially when corrosion and atomic diffusion are active. In reactors, irradiation is a fourth and major parameter. Thus, materials development still calls for a major scientific and engineering program of studies.

Subsection 4.—Space Research in Canada*

The interests of Canadian scientists engaged in space research continue to be mainly in the field of aeronomy with particular, though not exclusive, emphasis on the high-latitude atmospheric and magnetospheric phenomena which are now generally believed to be related to the various disturbances on the sun. Canada, with its large land mass extending on both sides of the auroral zone, is ideally located for studies of medium- and high-latitude atmospheric phenomena and Canadian scientists have long been active in this exciting field. Although many of the programs of ground-based observations are still of great importance and are continuing, measurements from rockets and satellites are now making a significant contribution to knowledge of the upper atmosphere and solar-terrestrial relations.

The satellite program of the Defence Research Board carried on in collaboration with the United States National Aeronautics and Space Administration (NASA), continues to form a major part of the Canadian space activities. The Canadian satellite *Alouette I*, which was launched on Sept. 29, 1962, is still in orbit. Its instruments are functioning satisfactorily and there is every indication that it will continue to operate and send back scientific data for some time to come. This satellite carries a number of experiments but its main objective is the sounding of the ionosphere from above. The ionosphere is the diffuse layer of highly conducting gas lying between heights of about 60 to 300 miles. It reflects radio waves over a wide band of frequencies and is of great practical importance for communications. The underside of the ionosphere has been studied for many years by the technique of sending a short pulse of radio waves up from the ground and examining this pulse after it had been reflected back from the ionized regions. *Alouette*, however, was the first spacecraft to provide scientists with a continuous sounding of the ionosphere from above. This spacecraft is now the oldest operating satellite that continues to transmit data.

Other instruments carried by the satellite enable studies to be made of radio waves from outer space and very low frequency electromagnetic waves whose propagation is

* Prepared (September 1968) in the Space Research Facilities Branch, National Research Council, Ottawa.

influenced by the earth's magnetic field. There are also a number of detectors to study cosmic rays, energetic particles in the Van Allen radiation belts and the artificial radiation introduced by high-altitude nuclear explosions. Data are transmitted from the satellite to the ground stations in several countries around the world and the magnetic tape records are sent to Ottawa for analysis. Scientific results to date have been most gratifying and the satellite measurements have added greatly to knowledge of the earth's upper atmosphere.

The over-all design and construction of the spacecraft were carried out by the Defence Research Telecommunications Establishment. Some components were made by Canadian industry and the cosmic ray instruments were the responsibility of the National Research Council. The cost of the launching vehicle, the actual launching and much of the data recovery were undertaken by NASA as part of its international co-operative program. This joint Canadian-United States program is continuing. On Nov. 29, 1965, the second Canadian satellite *Alouette II* was successfully launched by NASA from the Western Test Range in California, carrying instruments similar to but more sophisticated than those of *Alouette I*. Its elliptical near-polar orbit has an apogee of 3,000 km., allowing measure-

Telemetry receiving antennae in use at the Churchill Research Range. Because these sensitive devices are highly directional, the operators must track the course of the rocket's payload in flight, working from "look" angles received prior to launch.

A sounding rocket is prepared for launching at the Churchill Research Range under the watchful scrutiny of Base technicians and NRC scientists.

ments to be made over a much greater height range than previously. *Alouette II* is the first of four satellites to be built in Canada for the International Satellites for Ionospheric Studies (ISIS) series. ISIS "A" is scheduled for launching in January 1969 and "B" and "C" will follow at about two-year intervals.

The National Research Council has been responsible for the management of the Churchill Research Range in northern Manitoba since Jan. 1, 1966, under an arrangement formalized by a Canadian-United States governmental agreement providing for joint funding and use of the range and designating NRC and NASA as the responsible Canadian and American agencies. Operations at the range are carried out by a civilian contractor. At present about 70 large sounding rockets are launched each year together with about 200 small meteorological rockets.

Rockets have a special role in the space programs because there is an important region of the upper atmosphere that is too low for satellite orbits and too high to be reached by balloons or aircraft. In this region between heights of about 25 to 200 miles are found the absorbing layers in the lower ionosphere that cause radio blackouts and the complex atmospheric processes that produce the visible aurora. Because the axis of the earth's magnetic field is tilted, the auroral zone sweeps down across Canada, and Churchill lies almost in the middle of this zone. This region of the atmosphere is therefore of great interest and importance to Canadian scientists. For many years investigations were limited to ground-based radio and optical measurements but now rockets are being used to carry instruments right into the aurora. The measurement *in situ* of electron density, temperature and charged particles will ultimately lead to a proper understanding of the aurora and high-latitude disturbances.

Another zone of particular scientific interest is that in the vicinity of the magnetic dip pole. Because its geographic location at the present time is well outside the cover of the Van Allen radiation belts, which terminate in the auroral zones, the magnetic polar region is particularly suitable for the study of radiation from outer space. In 1966, two *Black Brant III* rockets carrying instrumentation for the measurements of galactic X-rays were launched from a quickly prepared site at Resolute Bay, N.W.T. The operation was very successful and the results were of considerable scientific interest. In 1967 the installation was improved and expanded to cater for meteorological rockets, and two more *Black Brant III* vehicles, carrying similar experiments as in 1966, were launched. On this occasion, United States scientists participated in the Resolute launchings by firing two boosted ARCAS rockets. Launches are planned for late 1968 for the NRC, the University of Calgary, NASA and the Meteorological Branch of the Department of Transport.

Many of the rockets fired at Churchill are of Canadian design and development; the *Black Brant* rockets were pioneered by the Defence Research Board and are now produced commercially in Winnipeg. *Black Brant IIA* is a 17-inch diameter vehicle capable of carrying 150 lb. of payload to over 100 miles. *Black Brant III*, 10 inches in diameter, will lift 40 lb. to about 100 miles. *Black Brant IV* is a two-stage rocket, combining the *IIA* and *III*, and will go to a height of about 600 miles. *Black Brant VA* and *VB* are both 17-inch vehicles, the former with the same motor as the *IIA* but with a rather higher performance, and the latter with a motor giving slightly less thrust for double the time, which results in an ability to carry 250 lb. of payload to over 240 miles. Contractors employed under contract by the Space Research Facilities Branch of the National Research Council in the instrumentation of rockets and the integration of the payloads include Bristol Aerospace Limited, the Space Engineering Division of the University of Saskatchewan and the Institute of Aeronautical Studies of the University of Toronto.

Along with the increased activity in Canadian space programs there has been a general broadening of interests. The Meteorological Branch of the Department of Transport (DOT) Meteorological Satellite Data Laboratory is applying satellite observations to the problems of meteorology and ice reconnaissance. Two experimental ground stations for the development and use of meteorological satellite systems have been completed at Halifax

and Toronto. In the field of communications satellites, DOT has a joint program with NASA in which Canada participates in the testing of satellites in the Applications Technology Satellite (ATS) Program using the experimental communications satellite ground stations at Mill Village, N.S.

Canadian universities continue to be very active in the field of space research. Nine university groups have programs involving the instrumenting of rockets, balloons or satellites for upper atmospheric studies.

Much of the foregoing work is shared with Canadian industry. Civilian contractors are producing instruments and space vehicles for both Canadian and foreign experimenters. In some programs, such as the *Alouette* satellite and the development of *Black Brant* rockets, industry is playing a major role. Other work of great importance for the space programs, such as fundamental research on materials and in plasma physics, is also being carried on in industrial laboratories.

In 1966 a special study was commissioned by the Science Secretariat of the Federal Government to review the existing Canadian programs in space science, to determine the reasons for a space program in Canada, to forecast future programs and to outline the elements of a suitable organization. This study, known as the Chapman Report, was published in March 1967 and led to the formation in July 1967 of a Task Force on Satellites which has now made recommendations to the Government on the scope and nature of Canada's future activities in the use of satellites, including satellite communications, and avenues for co-operation with United States, European and other interests in this field.

Subsection 5.—Research in Geophysics and Astronomy

Research in the field of geophysics is covered in the 1967 Year Book under the heading of Geology and Economic Minerals of Canada, pp. 30-32. The following item on this subject gives brief additional data on current (1967-68) projects and facilities. A special article on Astronomy in Canada, appearing in the 1965 Year Book at pp. 47-55, indicates in some detail the advances made in astronomical research and educational facilities; the write-up on pp. 408-409 mentions the highlights only.

Geophysics.*—Geophysics—the study of the earth, including the oceans and atmosphere, by the methods of physics—embraces a number of fields, each a major science in itself, such as geodesy, seismology, terrestrial magnetism, meteorology, oceanography and hydrology. Work in geophysics in Canada is carried on by a number of Federal Government departments, some provincial governments, nearly all universities and by companies engaged in geophysical prospecting for oil or minerals.

Currently, in the field of seismology, the 25 first-order seismograph stations and four subsidiary stations operated by the Dominion Observatory, with the co-operation of universities in several cases, provide good coverage of the country for the recording of earthquakes. The regular stations are supplemented by a special array of detectors at Yellowknife, N.W.T., operated by the Dominion Observatory as part of a world network of highly sensitive detection stations for nuclear explosions. Also, a temporary network has been established in British Columbia in the vicinity of the Bennett Dam on the Peace River to investigate the possible effect of man-made lakes on the crust. At the Dominion Astrophysical Observatory in Victoria, B.C., a study of earthquake probabilities in Canada has been made to assist in devising building codes. Considerable work has also been done by both government and university groups on the study of the earth's crust, using waves from explosions.

Measurements of both the gravitational and magnetic fields of the earth were extended during 1967-68 over land areas by the Dominion Observatory and the Geological Survey, and over the oceans by the Bedford Institute of Oceanography. These measurements

* Prepared by Dr. G. D. Garland, Geophysics Laboratory, University of Toronto, Toronto.

provide information that is extremely useful in the study of concealed geological structures. A very large area of Canada has now been covered by airborne magnetometer maps (partly through co-operative federal-provincial surveys); in many regions, these maps have come to be an essential item of equipment for the prospector. The Geological Survey has published a magnetic map of Canada and the Dominion Observatory has issued a gravity map. These compilations indicate that certain large-scale features may be traced geophysically for very long distances. Because the north magnetic pole is located in Canada, studies of magnetic disturbances and their relation to conditions in the upper atmosphere are of importance in Canadian geophysical research. Observations by means of rockets were made at the Churchill Research Range in northern Manitoba and also with rockets fired from Resolute Bay, N.W.T. Some university groups have conducted research with instruments carried by high-altitude balloons. Satellite *Alouette I* launched in 1962 and *Alouette II* launched in 1965 continue to provide information on the ionosphere and instrumentation is being prepared for a new series of satellites for ionospheric studies (see pp. 404-407).

The Canadian program for the International Hydrological Decade, a ten-year study of the world's freshwater resources, has been developed in detail. Experimental basins across the country have been selected for the observation of the effects of changes in surface features on the amount and quality of groundwater. Canadian groups will participate in an intensive study of the waters of the Great Lakes, to be known as the International Field Year on the Great Lakes (beginning April 1970). A feature of the Canadian program in hydrology is the importance of glacier studies. During the year, expeditions to over 20 glaciers in the Arctic or Cordillera were carried out by Canadian or other groups. Glaciological research included studies of the causes of sudden glacial surges, and also test of radar methods of measuring ice thickness.

Meteorology includes not only the routine forecasting carried out principally by the Meteorological Branch of the Department of Transport (see p. 48) but also research in special problems by the Branch and by at least 12 university groups. These problems include controlled experiments in weather modification, the mechanics of hail formation, the use of computers to study and predict large-scale motions of the atmosphere, and micro-meteorology, which is the detailed investigation of meteorological conditions in regions of small extent.

Oceanographic research forms an important part of the Canadian geophysical program. Groups from the Department of Energy, Mines and Resources and from universities contribute to the knowledge of the ocean floor and to air-sea interactions at the ocean surface. The study of the magnetic character of the ocean floor is proving to be vital to an understanding of the history of the oceans and therefore to world geology. Ships of the Bedford Institute of Oceanography have contributed to this study, particularly in the north Atlantic Ocean.

Astronomy.*—Modern astronomical research is based on observations secured with complex optical and radio telescopes. The major centres of this research in Canada have developed within the Federal Government and at a few universities. Research in optical astronomy began early in this century at the Dominion Observatory, Ottawa, and this was followed by the construction of larger telescopes at the Dominion Astrophysical Observatory, Victoria, and the David Dunlap Observatory of the University of Toronto. Other Canadian universities teaching astronomy include the University of Western Ontario, Queen's University, the University of Waterloo, Laurentian University, the University of Manitoba, the University of Saskatchewan, the University of British Columbia and Victoria University. Some of these universities have their own small observatories. Work on the planned new observatory for Mount Kobau in southern British Columbia which was to be equipped with a 156-inch reflecting telescope, was discontinued in August 1968.

* Prepared by Dr. Ian Halliday of the Dominion Observatory, Ottawa.

Canada first entered the field of radio astronomy, the study of radio emissions from beyond the earth, in 1946 when the National Research Council began its study of solar radio waves. Radio astronomy has expanded rapidly and there are now radio telescopes operated by the University of Toronto, by Queen's University, by the Dominion Observatory near Penticton, B.C., and by the National Research Council at a large observatory in Algonquin Park, Ont., where a steerable radio telescope 150 feet in diameter began observations in 1966. An 84-foot parabolic telescope and two large arrays of antennas are in operation at the Penticton site. In 1967 the large telescopes at the Algonquin Radio Observatory and Penticton were used simultaneously as a long-baseline interferometer in the first successful attempt to measure the apparent angular size of quasi-stellar radio sources, or "quasars".

Canadian astronomers are engaged in various specialized fields of research. In the study of the solar system the sun has been studied for many years by both optical and radio techniques with emphasis on solar flares and other phenomena which affect the environment of the earth. Solar eclipses in which the path of totality crosses Canada have been observed whenever possible. Only minor attention has been devoted to study of the planets but major efforts have gone into meteor research. Both photographic and radar equipment are employed in this work and the study of meteor spectra and radar echoes

Scientist at the control console of the radio telescope at NRC's Algonquin Radio Observatory at Lake Traverse in Algonquin Park, Ont. The telescope is one of the most powerful and versatile in the world.

from meteor trails have been particular specialties. There is an increasing interest in the related field of meteorites and Canada has figured prominently in the study and interpretation of old craters caused by the impact of huge meteorites.

Stellar astronomy has been the largest single field of Canadian astronomy. One aspect of this is the accurate determination of the positions and motions of stars in the sky. The Dominion Observatory is continuing an active program of positional astronomy aided by new and highly specialized instruments. The large telescopes at Victoria and Toronto have been used primarily for spectroscopy, one of the major tools of astrophysics. Several programs have been completed in which large groups of stars have been studied individually to determine their true luminosities and motions in the line of sight. The results have then been used for research on the structure of the earth's Milky Way galaxy. From spectroscopic studies of certain types of close double stars, information on such properties as the size, mass, density and temperature of individual stars is secured. Stars whose light varies in intensity have been studied by photography for many clusters of stars and are also studied by photoelectric devices mounted on the telescopes at Victoria, Toronto and the University of Western Ontario.

Although the optical telescopes in Canada have not been used for extragalactic research, many of the stronger sources in the field of radio astronomy are now known to be exceedingly distant objects far beyond the stars of the earth's galaxy. Canadian radio telescopes are and will continue to be engaged in the observation of such sources. At the same time they are also involved in the study of clouds of gas between the stars of the Milky Way system, and this work complements the knowledge gained from spectroscopic research with optical telescopes.

Section 3.—Research Supported by Provincial Governments

Subsection 1.—Provincial Organizations

Five of Canada's provincial governments (Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta) have established research councils or foundations and two others (Ontario and British Columbia) have assisted financially in the setting up of such organizations. Quebec has also announced its intention of establishing a provincial research council and industrial research centre in the near future. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

Research and development expenditures by the seven provincial councils or foundations, the sources of funds for such purposes and personnel engaged in research activities are shown in Subsection 2, Tables 5 to 7, p. 414.

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. A new \$1,500,000 laboratory building, financed by an Atlantic Development Board grant and occupying a commanding 10-acre site in Dartmouth, N.S., will be completed in early 1969. It will house a staff of about 100, including 70 scientists and technicians.

The Foundation assists universities, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library service and cartographic, photogrammetric and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on pressures in underground strata and on crop damage by predators. Its Geophysical Division is equipped to undertake various types of magnetic, gravimetric, resistivity, seismic and electromagnetic explorations, and so assess the possibilities of the existence of oil, gas, potash and other economic mineral deposits in Nova Scotia and in the surrounding sea. The Chemistry Division is equipped with the most modern analytical equipment. The Technical Services Division provides industries in the province with a free field service on technical information and industrial engineering. Technical assistance is also provided on corrosion problems, equipment and process trouble-shooting and on new product development. The Operational Research Division prepares studies on provincial resource utilization and undertakes industrial studies at the request of individual firms.

A *Research Foundation Bulletin* is issued from time to time to keep industry advised of Foundation activities and also of important discoveries in science and technology. The *Research Record* provides a descriptive account of past research projects.

New Brunswick Research and Productivity Council.—This Council, with financial support from the New Brunswick Government and in specific areas from federal sources, provides an international management consulting service to governments, banking institutions and private industry and undertakes consultation and contract work on a repayment basis from industry. It has 65,000 sq. feet of laboratory space and employs a staff of more than 50 persons. The Council specializes in management consulting, engineering and technical information services, conducts training courses in management techniques and carries on applied research in the fields of mechanical and control engineering, food technology, microbiology and mineral technology. Policies are established by 13 Council members representative of provincial industry, labour, government and education, with the help of specialist advisory committees. The Executive Director has supervision over and direction of the work of the staff and has charge of all matters relating to the administration of the affairs of the Council. The Chairman of the Council reports annually to the Premier of the province.

Manitoba Research Council.—The Manitoba Research Council consists of seven members representing natural-resource-based industry, manufacturing, the University of Manitoba and labour. Its work is financed by provincial government appropriations, although fees and service charges may be levied for its services. The objectives of the Council are to promote or carry on, or cause to be promoted or carried on, research and scientific inquiries respecting agriculture, other natural resources, industry or other segments of the economy of the province and to help secure for Manitoba the benefits of research and scientific inquiries carried on elsewhere. The preponderance of small industrial establishments in Manitoba and their need for assistance in developing a more scientifically based production capability to improve their competitive position in domestic and world markets was the major reason for the establishment of the Council. At present it maintains an office in the Provincial Government Administration Building (Norquay Building) in Winnipeg.

Saskatchewan Research Council.—This Council was set up in 1947 under an Act of the Government of Saskatchewan. The Council carries out research in the physical sciences, both pure and applied, with the aim of improving the provincial economy. It is

therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. At first the Council had no scientific personnel and laboratory facilities of its own. Its research program was carried on at the University of Saskatchewan and was promoted by means of grants to members of the staff and scholarships to graduate students. The 1947 Act was amended in 1954 to empower the Council to acquire property, employ staff and conduct its own financial affairs. Laboratory buildings were erected on the university campus in 1957 and were extended in 1963. In the present program of research the emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. A large part of the program is carried out by the permanent staff, numbering about 60, but some of the Council's research is still promoted by grants to university staff. The members of the controlling body, the Council proper, are appointed by the Lieutenant-Governor in Council and consist of representatives of the government, the university and industry.

Research Council of Alberta.—The Province of Alberta set up a scientific and industrial Research Council in co-operation with the University of Alberta in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is principally financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province and toward the establishment of new industrial operations within the province. Investigations in the Council laboratories and pilot plant are organized into two branches—the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, mineral beneficiation and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, chemical process and product development, and gasoline and oil testing. There are, in addition, groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of 10 individuals representative of the government, the universities and industry. The various research projects are reviewed by advisory committees composed of specialists in each field, drawn from industry, the universities and the provincial government.

The main Council laboratories are located on the University of Alberta campus in Edmonton. A pilot plant facility is located in the Clover Bar area east of the city.

Ontario Research Foundation.*—The Ontario Research Foundation, established in 1928, is an independent corporation. It derives its powers from a special Act of the Ontario Legislature and is responsible to a Board of Governors consisting of leading members of the industrial, commercial and scientific communities who are appointed by the Lieutenant-Governor in Council. The organization was financed initially by an endowment fund, provided by industrial and commercial corporations and private individuals and an equal block grant from the provincial government. Most of its current income is derived from contract research undertaken mainly for industry. In recent years the Ontario Government has provided a direct annual grant to ORF, the amount of which is directly proportional to ORF's income from industry.

The Foundation is concerned primarily with the development of Canadian industry through the application of science and technology. Also, through the various departments

* See also p. 410.

of the Ontario Government, it undertakes work relative to the natural resources of the province. Foundation activities are not restricted to the province; work is undertaken for any organization in Canada on the same basis.

The Foundation contributes to the industrial economy and to the general welfare by: (1) undertaking industrial research and development for companies as requested; (2) undertaking research and development for governmental agencies as requested, particularly with respect to natural resources and to defence; (3) providing and maintaining an effective and efficient applied research and development facility for the use of industry and government agencies, using funds provided by the Ontario Government to support the back-up research necessary for this purpose; and (4) bringing to the attention of industry and governmental agencies research opportunities that promise economic or social benefits.

Situated in the Sheridan Park Research Community, 17 miles west of Toronto, and serving as the nucleus of that scientific centre, ORF provides the most modern facilities and equipment for scientific and technological investigations. Its staff of approximately 250 scientists, engineers, technicians, and service personnel has diversified academic training and industrial experience and is so organized that these specialized talents can be applied to individual research and development projects. In effect, the staff of ORF constitutes a reservoir of scientific and technical abilities from which industrial or governmental sponsors can draw at will.

Since its establishment, ORF has provided numerous companies—from the very small to the very large—with research and development services. These have ranged from short-term investigations and feasibility studies, through product and process development, to long-range fundamental scientific investigations. All research and development projects are conducted on a confidential basis—this includes all business, technical or proprietary information revealed to ORF by clients or prospective clients. Patents resulting from research and development studies are assigned to the client.

British Columbia Research Council.*—This Council is a non-profit, industrial research institute with offices and laboratories at 3650 Wesbrook Crescent, Vancouver 8, B.C. Its function is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific knowledge. The Council carries out contract research for clients on a confidential basis, initiates "in-house" research programs designed to promote and utilize the resources of the province, and provides a free technical information service in collaboration with the National Research Council. The Council is active in the areas of applied biology, chemistry, engineering, physics, operations research, industrial market studies and economic feasibility studies.

Subsection 2.—Expenditures by Provincial Organizations on Scientific Activities

As stated in Subsection 1, seven provinces have established research councils or foundations, each having the primary role of assisting firms with technical problems and of aiding with the development of provincial natural resources. Table 5 shows the approximate expenditures of these establishments as reported in the latest DBS biennial survey of expenditures on industrial research and development in Canada. There seem to be two main differences between the pattern shown for these provincial establishments and that shown for industrial research and development expenditures as a whole—the first is that wages and salaries seem to account for a larger portion of current intramural costs and the second is the relative unimportance of extramural payments.

* See also p. 410.

5.—Expenditures on Research and Development by Provincial Research Councils and Foundations, 1964-68

Type	1964	1965	1966	1967	1968 ¹
	\$'000,000	\$'000,000	\$'000,000	\$'000,000	\$'000,000
Intramural Expenditures	6.8	9.9	13.0	14.4	15.9
Current—					
Wages and salaries.....	3.6	4.2	4.7	5.3	5.8
Other.....	2.5	2.8	3.3	3.6	4.2
Capital—					
Land and buildings.....	0.3	2.3	4.2	4.3	4.2
Equipment.....	0.4	0.6	0.8	1.2	1.7
Extramural Expenditures	0.2	0.1	0.1	0.1	0.1
Grand Totals, Expenditures	7.0	10.0	13.1	14.5	16.0

¹ Forecast by respondents.

As shown in Table 6, the provincial governments are by far the most important source of funds, although some councils or foundations rely on them more than others. Payments for research and development contracts from Canadian industry are the second largest source of revenue, the Federal Government providing most of the remaining funds. The contribution of the Federal Government in 1967 was especially important as a source of the capital funds required by the councils and foundations. Table 7 shows that total personnel employed by these establishments increased 12 p.c. from 1965 to 1967.

6.—Percentage Distribution of Funds for Research and Development Performed by Provincial Research Councils and Foundations, 1965 and 1967

Administrators.....	18	20			

Section 4.—University Research

The two primary roles of universities are generally considered to be teaching and research. Canadian universities occupy a unique position as part of Canada's resources for research. They have special responsibilities not shared significantly by other institutions. Traditionally their role has been that of generating new knowledge *per se* and research of a basic nature has been favoured. Currently, however, there is a growing interest in applied research in the universities, expressed particularly by the professional schools. Nevertheless, basic research remains a primary responsibility of the universities

and a great deal of the basic research conducted in Canada is conducted in them. Research also provides a highly valuable contribution to the quality of university teaching. A further function of research in the university setting is the development of manpower to serve the research needs of society, since training for research can be conducted only in an environment where research is being undertaken. Some interest is being shown by Canadian universities in making greater commitments to research essential to Canadian goals, such as research in relation to water pollution, urban problems and medicine, which is occupying increasing numbers of faculty.

The total amount available to Canadian universities and colleges for sponsored, assisted and contracted research in 1966-67 was \$80,729,000, more than double the \$36,796,000 provided in 1963-64. The Federal Government's contribution in 1966-67 was \$52,120,000 or about 65 p.c. of the total; direct contributions from provincial governments amounted to \$11,756,000; foundations, associations, etc., provided \$7,021,000; and business and industry provided \$2,695,000. Five universities received about 50 p.c. of the total funds from all sources and 10 universities received 82 p.c. The largest single direct contributor to university research is the National Research Council which in 1967-68 provided research grants amounting to \$31,400,000 (in addition to \$6,100,000 allocated to major research facilities) covering the fields of natural sciences and engineering. The Medical Research Council in 1967-68 contributed \$9,600,000 by way of research grants to universities (in addition to \$1,370,000 for major facilities). Other contributors included the Defence Research Board (\$3,700,000), the Department of National Health and Welfare (\$3,000,000), the Canada Department of Agriculture (\$613,000), and a number of departments and agencies contributing smaller amounts. In the social sciences and humanities the major contributor to university research is the Canada Council which in 1967-68 provided \$4,100,000, exclusive of about \$1,000,000 for library acquisitions. A score of federal departments or agencies supported some work in the social sciences and humanities but their contributions were small. The total from federal sources, including the Canada Council, amounted to \$5,800,000. Scholarship support from the Canada Council, the National Research Council and the Medical Research Council in 1967-68 amounted to \$16,000,000.

University of Toronto's new Medical Building is one of the finest and best-equipped medical schools and research institutes on the North American Continent, a building that has been designed to keep pace with the rapidly changing character of scientific and medical research.

The number of full-time university teachers has been increasing steadily and rapidly, reaching 16,529 in 68 universities and colleges in 1967-68. Of these, 5,393 were in the fields of natural sciences and engineering; health sciences accounted for 1,619; humanities, 4,028; social sciences, 5,152; and 336 were classified as faculty administration. Preliminary findings in a cost study being conducted under the auspices of the Association of Universities and Colleges of Canada and other groups indicate that faculty devote on the average about 29 p.c. of their time to research and graduate student supervision.

Graduate students are the source of future research workers. In 1967-68, according to a DBS survey of higher education, 35,243 graduate students were enrolled in Canadian universities, of whom 24,187 were full-time students registered in 52 universities and colleges. The Office of Economic Studies of the National Research Council has noted a relative decline in the percentage of graduate students enrolled in natural sciences and engineering. In 1963-64 one out of every two graduate students was enrolled in science or engineering; in 1966-67 there were 9,200 full-time science and engineering graduate students and 11,900 in other disciplines. It was estimated that 1,245 Ph.D's would be awarded by Canadian universities in 1967-68, of which 872 would be in the science and engineering fields.

Section 5.—Industrial Research

Subsection 1.—Industrial Research and Development Activities

Canadian firms are becoming increasingly involved in research and development activities, particularly those associated with fabrication and end-product manufacture. The need to develop new or improved products to serve expanding domestic and foreign markets, to meet competition from other Canadian and foreign firms and to exploit efficiently the country's natural resources has required industry to form and expand competent research and development units. In the present decade, capital and operating expenditures for industrial research and development (R & D), encouraged by the growth in markets, production facilities, financial resources and supplies of technically skilled manpower, have increased rapidly, as shown in the chart on p. 384, accompanied by a growth in the professional and supporting personnel of about 10 p.c. per annum; capital expenditures more than tripled from 1961 to 1965.

The Federal Government recognizes the need for a strong research and development effort in Canada and has inaugurated several programs of direct assistance. The Department of Industry administers the Defence Development Sharing Programme and the Programme for the Advancement of Industrial Technology. The National Research Council and the Defence Research Board both make grants in support of industrial research projects. In addition, the Industrial Research and Development Incentives Act (IRDIA) authorizes the Department of Industry to make substantial grants to firms expanding their research and development programs.

The Programme for the Advancement of Industrial Technology is of particular interest because of its innovative slant and selective nature. It was established in 1965 and is the civil counterpart to the Defence Development Sharing Programme. Its basic aim is to help Canadian secondary industry up-grade its technology and expand its innovative activity by underwriting the technical and market risks of specific product or process development projects which involve a significant advance in technology and which, if successful, offer good prospects for commercial exploitation in domestic and foreign markets. Priority goes to projects which increase productivity or otherwise contribute directly to attain a unique capability or technical leadership, taking advantage, where possible, of Canada's natural resources and skills. Three of many successful innovations assisted by the Programme can be mentioned by way of example: Canadair Limited developed the CL-215 fire bomber/spray/utility aircraft in response to the country's forest and resource development requirements; McPhar Geophysics Limited developed a new electromagnetic

system for airborne geophysical prospecting; RCA Victor Company Limited developed and has successfully exported special electronic communication satellite earth station systems and equipment.

Employment Related to R & D Activities.—The level of employment of scientists and engineers in the various sectors of industrial research and development gives a measure of the corresponding activity. The first 10 industries rank as follows (1965):—

Rank	Industry	Scientists and Engineers in R & D	Per Cent of Total
		No.	
1	Electrical products.....	1,737	27.3
2	Chemical products (other than drugs and medicines).....	946	14.8
3	Aircraft and parts.....	665	10.4
4	Paper.....	454	7.1
5	Drugs and medicines.....	299	4.7
6	Petroleum products.....	273	4.3
7	Scientific and professional instruments.....	257	4.0
8	Mines.....	237	3.7
9	Food and beverages.....	231	3.6
10	Primary metals (ferrous).....	218	3.4
ALL INDUSTRIES.....		6,367	100.0

The above 10 industries absorb some 83 p.c. of the scientists and engineers employed in R & D and represent more than half the sales volume of Canadian industry; the first three industries employ more than 50 p.c. Some 64 p.c. of the professionals involved in industrial R & D are engineers, which reflects the emphasis on applied research and development. About 24 p.c. of the scientists and engineers have advanced degrees (approximately 2 p.c. Ph.D's and 12 p.c. M.Sc's).

It is possible to distinguish a group of research intensive industries by considering the number of scientists and engineers employed in R & D per million dollars of sales as follows (1965):—

Rank	Industry	Scientists and Engineers per \$1,000,000 Sales
		No.
1	Scientific and professional instruments.....	2.22
2	Aircraft and parts.....	2.04
3	Drugs and medicines.....	1.62
4	Electrical products.....	1.37
5	Chemical products (other than drugs and medicines).....	0.69
6	Mines.....	0.27
7	Textiles.....	0.27
8	Rubber.....	0.21
9	Primary metals (non-ferrous).....	0.19
10	Machinery.....	0.18

In all industries reporting, there were on the average 0.27 scientists and engineers in R & D per \$1,000,000 of sales; R & D expenditures were 1.1 p.c. of sales. The first five industries shown, which employed about 60 p.c. of the total professional staff in R & D, are clearly differentiated from the remainder by ratios of from two to 12. These five industries produce relatively sophisticated products and undertake more R & D in Canada than some of the others; for example, 62 p.c. of rubber, 35 p.c. of non-ferrous primary metals and 25 p.c. of machinery R & D expenditures are foreign. Also, research and development undertaken for military purposes, which accounts for 25 p.c. of the total R & D expenditures, was very important to some of the five top industries; military R & D accounted for about 57 p.c. of the intramural R & D expenditure for the aircraft industry, 63 p.c. of that for the scientific and professional instruments industry, and 36 p.c. for the electrical products industry.

Subsection 2.—Industrial Research and Development Expenditures

The latest biennial DBS survey of expenditures on industrial research and development in Canada was carried out in 1968 and will, when completed, give estimates for 1965 to 1968. At the time of printing, however, the results of this survey were not yet available and those for the previous survey taken in 1966 are summarized in the following tables; details of the 1968 survey will be contained in the DBS publication *Industrial Research and Development Expenditures in Canada, 1967*.

The type of industrial research and development covered by these surveys ranges from pure research designed to obtain new knowledge in the physical and life sciences to conceiving and developing new products and processes, or major changes in products and processes, and bringing them to the stage of production. Such activities as market research and process and quality control are excluded. Companies surveyed were asked to report the cost of research and development done within the company in Canada and payments for research done outside the company in and outside Canada.

Spending on industrial research and development has increased every year during the period 1963-66. The annual increases in current expenditures from 1963 to 1964 and from 1964 to 1965 were about 20 p.c., but this rate seems to have declined to about 5 p.c. in 1965 to 1966. However, the 1966 estimates are largely forecasts. A possible explanation of this apparent decline may be that several major projects with heavy costs for prototype materials or 'expendable' research equipment are reaching completion. Both the aircraft and primary metals industries forecast declines in expenditures in 1966.

Two other observations may be made from the data in Table 8. The first is that expenditures for research and development plant and equipment seem to continue at a rate of about 20 p.c. of current intramural costs. The second is that the size and relative importance of payments for research and development performed abroad seem to be declining. Indeed, in 1965 companies reported receiving almost as much for such purposes from other countries as they spent abroad.

8.—Total Industrial Research and Development Expenditures, 1963-66

Item	1963	1964	1965	1966 ¹

Table 9 shows the current intramural research and development expenditures by performing industries. In 1965, three industries—electrical products, aircraft and chemical products—accounted for about 57 p.c. of the total expenditures. Since 1955, the year of the first survey, these industries have spent more for current intramural research and development than all others combined.

¹ Forecast by respondents.

Because of difficulties of interpretation and estimation, the figures shown in Table 10 cannot be more than approximations. However, they do indicate that the research and development performed within an industrial group may be for the benefit of some other related industry or for a new 'industry'. Furthermore, company groups may have been assigned to one industry, whereas the activities of the group, including research and development, may actually cover several industries. The relevant table in *Industrial Research and Development Expenditures in Canada, 1965*, which gives the distribution by industry, shows this more clearly. For example, about three quarters of the research and development for rubber products and almost one half of that for textiles were performed by the chemical industry; also, research and development for the aircraft industry was largely for other products—about \$27,000,000 was spent on aircraft, \$10,000,000 on guided missiles and space vehicles, and \$22,000,000 on other transportation equipment.

For all Canadian industry, the performing company is by far the most important source of funds. However, Table 11 gives sources of funds for total current and capital research and development expenditures. Since capital expenditures are not usually financed by governments or other companies supporting a firm's research and development program, the performing company would be a less dominant source of funds for current intramural expenditures—perhaps accounting for about 65 p.c. rather than 71 p.c. Other significant sources are the Federal Government, foreign governments and foreign related companies. Industries and firms do not rely on the same sources to the same extent. For example, about 67 p.c. of the research and development funds for the aircraft industry seems to come from outside the performing company. The direct support of the Federal Government goes mainly to two industries—aircraft (52 p.c.) and electrical products (31 p.c.). Funds from foreign sources account for about one fifth of all intramural expenditures for the drug, petroleum and aircraft industries.

Section 6.—International Comparisons in Research and Development Expenditures

In the early 1960s, Canada ranked eighth among a selected group of industrialized countries in terms of percentage of gross national product (GNP) spent on research and development (as shown in Table 12) and third in GNP per capita.

12.—Comparison of Research and Development Effort in Some Developed Countries or Areas

SOURCE: *Reviews of National Science Policy: U.S.A., OECD, Paris 1968.*

Country or Area	GNP (1964)	GNP per capita (1964)	Popu- lation (1964)	R & D Expenditure		
				Amount	As P.C. of GNP	Year
	\$'000,000,000	\$	'000,000	\$'000,000		
Canada.....	43.54	2,109	19.2	425	1.0	1963
European Economic Community (EEC), excl. Luxembourg.....	273.98	1,774	179.6	3,462	1.4	1963-64
Germany.....	103.98	1,674	58.2	1,436	1.4	1964
France.....	88.12	897	48.4	1,299	1.6	1963
Italy.....	49.58	1,502	51.1	290	0.6	1963
Belgium.....	15.44	1,385	9.3	123	0.9	1963
Netherlands.....	16.86		12.1	314	1.9	1964
Japan.....	69.08	622	96.9	892	1.5	1963
Sweden.....	17.47	2,281	7.6	253	1.5	1964
United Kingdom.....	91.90	1,700	54.2	2,159	2.3	1964-65
United States.....	638.82	3,243	192.1	21,323	3.4	1963-64

Within this group of industrialized countries there are wide differences in total resources, in population density, in defence and technological commitments, and in industrial, commercial and political structure. These qualifications must be kept in mind when making comparisons.

Research and development expenditures in Canada (Chart I, p. 383), expressed in terms of GNP, were about one third of those in the United States, one half of those in the Netherlands and the United Kingdom, and approximately two thirds of those of Germany, France, Sweden and Japan.

Government support of scientific activities in Canada doubled during the period 1960-66, reaching \$400,000,000 in 1966 (Chart II, p. 384). The proportional growth rate was close to that for government support of research and development in Britain. The contributions of industry and university to research and development funds increased rapidly during this period (Chart II).

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect. 101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes, particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciary are given in Chapter II, pp. 77-79, and provincial judiciaries are dealt with briefly at p. 79.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts, some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbidge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a newspaper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 442-444).

It is most important to note that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:—

"1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,

- (a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
- (b) the right of the individual to equality before the law and the protection of the law;
- (c) freedom of religion;
- (d) freedom of speech;
- (e) freedom of assembly and association; and
- (f) freedom of the press."

Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961 (SC 1960-61, cc. 43-44), the offence of murder was divided into capital and non-capital, the death penalty was abolished in relation to the offence of non-capital murder, and the term *criminal sexual psychopath* was dropped and the term *dangerous sexual offender* substituted; in 1965 (SC 1964-65, c. 53) provision was made for the right to appeal in *habeas corpus* proceedings.

The concept of "non-capital murder" was introduced into Canadian criminal law in 1961. At that time, capital murder was defined to include, for example, planned and deliberate murder, murder in the course of certain violent acts and murder of peace officers and prison officers. Life imprisonment was substituted for the death penalty in cases where the accused was convicted of non-capital murder. In 1966, the House of Commons, on a free vote, rejected a Bill under which the death penalty for murder would have been completely abolished but in 1967 (SC 1967-68 c. 15) an Act was passed under which the definition of capital murder is restricted to the murder of peace officers or prison officers. This Act was brought into force on Dec. 29, 1967, and will continue in force for a period of five years from that day. The Act will then expire unless before the end of the five-year period Parliament by a joint resolution of both Houses directs that it shall continue in force. If the Act is not continued in force before the expiry of the five-year period, the broader definition of capital murder introduced in 1961 will again come into operation. It should be noted that the law contains a provision whereby a person in respect of whom sentence of death has been commuted or a person who has been sentenced to life imprisonment for capital murder shall not be released without the prior approval of the Governor in Council.

A Bill (C-195) proposing a number of changes in criminal law and procedure was introduced and given first reading in the House of Commons on Dec. 21, 1967. The proposals relating to the Criminal Code constitute the most comprehensive review of that Code since it came into force on Apr. 1, 1955. Among the changes to the substantive law

proposed in the Bill are amendments relating to gaming and lotteries, "drinking and driving", homosexual acts and therapeutic abortion.

At present, lotteries and games of chance or mixed chance and skill are, with limited exceptions, unlawful. Under the proposals in the Bill, it would be lawful for the Federal Government to conduct a lottery and for a provincial government to pass legislation enabling it to conduct a lottery either alone or in conjunction with one or more other provincial governments. The proposals would also enable provincial authorities to issue licences under which charitable and religious organizations would be authorized to conduct lotteries and games and under which agricultural fairs and exhibitions would no longer be restricted to lotteries and games conducted on the exhibition grounds.

Under a proposed amendment in the Bill, a person would be guilty of an offence if he drives a motor vehicle while the proportion of alcohol in his blood exceeds 80 milligrammes of alcohol in 100 millilitres of blood. It would be compulsory for a driver to take a blood test when required to do so by a peace officer who has reasonable and probable grounds to believe that the person's ability to drive is impaired and it would be an offence for a person to fail or refuse without reasonable excuse to take a blood test when so required. It is also proposed that, where such blood test is taken within two hours of the alleged offence and the various conditions set out in the legislation relating to the taking of the test are complied with, the result of the test would be *prima facie* evidence of the proportion of alcohol in the driver's blood.

The Bill also contains provisions whereby therapeutic abortion would not be unlawful where the operation is carried out after the therapeutic abortion committee of an accredited hospital has certified that the continuation of the pregnancy would or would be likely to endanger the life or health of the female. Under the proposed amendments, the operation could be performed only by a duly qualified medical practitioner and only in an accredited hospital and the Minister of Health of a province would be entitled to information relating to the issue of a certificate and to the operation.

The Bill also contains a provision, the principal effect of which would be to remove from the ambit of the criminal law homosexual acts committed in private between two consenting adults.

Other significant changes proposed in the Bill relate to the publication of the evidence at preliminary enquiries, the procedure in the case where an accused person may be unfit to stand trial, the use of suspended sentence and probation, and certain new rights of appeal.

As noted earlier in this Section, an amendment was made to the Criminal Code in 1959 restricting the publication of an admission or confession at a preliminary inquiry. Under a proposal contained in the Bill, provision would be made whereby, on the application of the accused, the magistrate or justice holding a preliminary inquiry may make an order forbidding publication of *any* of the evidence until the accused has been discharged or, if he has been committed for trial, the trial has ended. Apart from such an order, of course, the present prohibition against publishing an admission or confession would remain.

At present, where there is reason to believe that the accused person is unfit on account of insanity to stand trial, the issue of his fitness to stand trial is decided as soon as it arises. If the court decides that the accused is not fit to stand trial, he is detained in custody at the pleasure of the Lieutenant-Governor. As the merits of the case against him are not tried, it is possible for an innocent person to be so detained. Under the proposed amendments, the court would have the power to postpone dealing with the issue of fitness to stand trial until after the prosecutor has presented his evidence. If the prosecutor's evidence is not sufficiently strong to make out a case, the accused would be acquitted and set free. If he required treatment for a mental condition, he would be dealt with under the applicable provincial mental health legislation instead of under the Criminal Code.

In addition, in order to safeguard the rights of those persons who are found unfit to stand trial and therefore detained in custody, the Lieutenant-Governor of the province would be authorized to appoint a board to review at least every six months the case of every person so detained. This same board would also review at least every six months the case of every person who is held in custody in the province following an acquittal on account of insanity at the time the offence was committed.

In regard to sentence, the Bill contains provisions which would enable courts to make more liberal use of suspended sentences, with or without probation. At present, the fact that the offender has more than one previous conviction generally prevents the court from suspending the passing of sentence. The proposed amendments would remove this restriction; would enable probation orders to be transferred from one province to another; would enable the court to make a probation order in addition to a sentence of imprisonment not exceeding two years; and would make it a substantive offence, punishable on summary conviction, for a person on probation wilfully to refuse to comply with the probation order.

The Bill also contains amendments relating to appeals by way of new trial in summary conviction cases which are designed to make the institution of such appeals less complicated and costly. At present, for example, the appellant must supply the appeal court with a transcript of the evidence taken at the trial, unless the appeal court makes an order dispensing with such transcript. Under a proposal contained in the Bill, it would no longer be necessary for the appellant to provide the transcript unless the appeal court specifically ordered him to do so.

The Bill also proposes to narrow the definition of "dangerous sexual offender" which was introduced in 1961 (SC 1960-61, cc. 43-44) and to give the court of appeal express power to order a new hearing in the case of an appeal arising out of an application for preventive detention of a person as a habitual criminal or as a dangerous sexual offender.

Section 2.—Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the graver crimes. Offences punishable on summary conviction—those not expressly made indictable—include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable how far some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

Subsection 1.—Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, so that it may be possible to evaluate the population engaged in prohibited activities and to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, although individuals may be charged with more than one offence, only one offence

is tabulated for each person. This offence is selected according to the following criteria: (1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage—conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another—for example, charged with murder and convicted of manslaughter—the offence selected is the one for which the person was convicted.

In 1966 there were 51,080 adults charged with 89,176 indictable offences, of whom 45,670 were found guilty of 79,865 offences. In the previous year there were 46,662 adults charged with 83,796 indictable offences, of whom 41,832 were found guilty of 75,300 offences.

Table 2 classifies indictable offences by type of offence for 1965 and 1966. Class I covers offences against the person and in 1966 there were 6,582 males and 366 females convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering, extortion and robbery—serious crimes which involve acts of violence—are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1966 there were 329 men and 99 women convicted under federal statutes of whom 297 men and 96 women were offenders under the Narcotic Control Act.

¹ Includes abortion, indecent assault on female, sexual intercourse and attempt, incest, procuring, rape, attempted rape and seduction.

² Includes causing death in the operation of a motor vehicle or otherwise.

Table 3 shows that 35.5 p.c. of the persons convicted of indictable offences in 1966 had not gone beyond elementary school grades in education, 53.4 p.c. were 24 years of age or younger, 30.3 p.c. were between the ages of 25 and 44, and 78.1 p.c. lived in urban centres. Of these offenders, 87.5 p.c. were males, 83.1 p.c. were born in Canada, 59.5 p.c. were single, 18.9 p.c. were recorded as labourers and 12.4 p.c. had no remunerative employment.

Female Offenders.—There were 5,729 female offenders convicted of indictable offences in 1966 compared with 4,840 in 1965. Of these offenders, Ontario accounted for 2,180, Quebec for 1,443 and British Columbia for 817. The ratio of female offenders convicted to total persons convicted moved upward from 11.6 p.c. in 1965 to 12.5 p.c. in 1966, ranging from 4.8 p.c. in the Yukon and Northwest Territories to 14.3 p.c. in Quebec.

4.—Females Convicted of Indictable Offences, by Province, 1965 and 1966

Multiple Convictions.—Table 5 shows the number of persons having more than one conviction at a court appearance for the years 1962 to 1966. Multiple convictions occur most often in cases of forgery and uttering, false pretences, theft, having in possession, and breaking and entering.

Grand Totals.....	38,663	42,914	42,097	41,832	45,670

Disposition of Cases and Previous Convictions.—As shown in Table 1, p. 427, of all suspects before the courts for indictable offences in 1966, 89.4 p.c. were adjudged guilty. There was, however, considerable variation among the provinces in this respect, the proportion ranging from 87.0 p.c. in British Columbia to 98.6 p.c. in Newfoundland.

Table 6 shows that of the 45,670 persons convicted in 1966, 25.7 p.c. had no previous conviction, 13.2 p.c. had previously been found guilty of one offence and 30.0 p.c. had two or more earlier convictions; court records for the other 31.1 p.c. were not obtained. There is little change in these percentages from year to year.

**Subsection 2.—Young Adult Offenders (16-24 Years)
Convicted of Indictable Offences**

Attention has been focused in recent years on the needs of the young adult offenders of from 16-24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational, trade training and other formative disciplines. The young men and women in this age group account for 18.7 p.c. of the total

population 16 years of age or over, but they form over half of the criminal population committing indictable offences. The group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training. There were 24,397 young adult offenders in 1966, an increase of 8.9 p.c. over the previous year.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of a jury. Such cases are heard in police court with a minimum of delay.

Subsection 4.—Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a judge and jury or a judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1966 there were 3,273 appeals in indictable cases disposed of by the courts, of which 178 were Crown appeals and 3,095 appeals of the accused. Of the Crown appeals 51 were from acquittal and 127 from sentence; of the appeals of the accused, 953 were from conviction and 2,142 from sentence. Appeals in summary conviction cases disposed of by the courts numbered 1,803 in 1966. Of these, 204 were appeals of the informant and 1,599 appeals of the accused. The informant appeals comprised 178 from acquittal and 26 from sentence and appeals of the accused comprised 1,448 from conviction and 151 from sentence.

Section 3.—Juvenile Delinquents

Juvenile Delinquent, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency.

The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age; in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec, Manitoba and British Columbia under 18 years. In the interests of uniformity, it has been the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over in the annual report on *Statistics of Criminal and Other Offences* and to publish data relating to those under 16 years of age in a report entitled *Juvenile Delinquents*. In 1966, 3,824 juveniles 16 and 17 years of age were found delinquent in those provinces where the upper age limit is under 17 or under 18 years of age.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency—the most serious—was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

Section 4.—Correctional Institutions and Training Schools

Subsection 1.—Statistics of Correctional Institutions and Training Schools

Correctional institutions may be classified under four headings: (1) Penitentiaries—operated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories—operated for adult offenders by the provinces in which individual sentences of up to two years are served; (3) Common Gaols—operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools—operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In-custody" figures shown in Table 23 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on

parole, deaths, pardons and releases on court order. In-custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 23 and 24 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments is made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1961; however, totals for each type of institution have recently shown a tendency to level off or decline slightly.

23.—Population in Penitentiaries, Years Ended Mar. 31, 1962-67

Subsection 2.—The Canadian Penitentiary Service*

The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected

* Prepared under the direction of A. J. MacLeod, Commissioner of Penitentiaries, Ottawa.

therewith. In the year ended Mar. 31, 1967, the federal penitentiary system consisted of six maximum security, 10 medium security and 14 minimum security institutions, all for males; one prison for women; one maximum security prison camp for males of the Freedomite Doukhobor Sect; one security institution for elderly recidivists; and three Correctional Staff Colleges.

The six maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act (SC 1960-61, c. 53).

The medium and minimum security institutions and the camps receive inmates transferred from the maximum security (receiving) institutions on the basis of their suitability for special forms of training, including vocational training. Of the medium security institutions, three—Collins Bay Penitentiary, Joyceville Institution, and Warkworth Institution—are within a few miles of Kingston; the Federal Training Centre and the Leclerc Institution are close to St. Vincent de Paul; and the other institutions are located at Matsqui, B.C., Drumheller, Alta., Cowansville, Que., and Springhill, N.S.

Eight minimum security correctional camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.; Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; Gatineau (Gatineau Park) and Valleyfield, Que.; Blue Mountain near Gagetown, N.B.; and Springhill, N.S. Six minimum security farm annexes operate as extensions of the penitentiaries at Dorchester, St. Vincent de Paul, Collins Bay, Joyceville, Stony Mountain and Prince Albert, respectively. There is also a medium security industrial satellite at St. Vincent de Paul.

The Prison for Women at Kingston, Ont., receives inmates transferred upon committal to penitentiary in any part of Canada.

The special security Prison Camp for Freedomites who have been sentenced to imprisonment in penitentiary is located near Agassiz, B.C., and is called Mountain Prison. When the sentences of the female Doukhobor prisoners were completed, part of Mountain Prison was converted to an institution for older recidivists.

A new maximum security institution was under construction during 1967-68 at Ste. Anne des Plaines, Que. New medium security institutions were opened at Drumheller, Alta., Warkworth, Ont., and Springhill, N.S., and a Special Correctional Unit at St. Vincent de Paul, Que.

Three Correctional Staff Colleges—one at Kingston, one at St. Vincent de Paul and one at New Westminster—are operated for the training of recruits and for the advanced training of penitentiary officers. The Kingston College serves English-speaking or bilingual officers, the St. Vincent de Paul College is primarily for French-speaking officers from all parts of Canada, and the Western Staff College trains the recruits for the institutions in the Western Region. These Staff Colleges provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

The Headquarters of the Service is located in Ottawa. Regional directorates have been established at New Westminster, B.C., Kingston, Ont., and St. Vincent de Paul, Que., for the Western, Ontario and Quebec areas, respectively.

Subsection 3.—The National Parole System*

Parole is a means by which an inmate in any correctional institution in Canada, if he gives definite indication of his intention to reform, can be released from prison. The purpose of parole is the protection of society through the rehabilitation of the inmate.

* Revised by T. G. Street, Chairman, National Parole Board, Ottawa.

It is essential for the public to understand that the true purpose of punishment should be the reformation of the offender and not just vengeance or retribution but, since the Parole Board is as much concerned with the protection of society as with the reformation of the inmate, it recognizes that the welfare of an individual inmate must not be allowed to impair the success of the parole system or the public safety.

It is the function of the Parole Board to select those inmates who show some sincere intention to reform and to assist them in doing so by granting parole. The inmate then is allowed to serve the remainder of his sentence in society, but under supervision. He is subject to restrictions and conditions as to his conduct and behaviour, designed for his welfare and the protection of others. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence but only with the problem of deciding in each case whether or not there is chance of reformation. Parole is not a matter of clemency and is not granted on compassionate or humanitarian grounds but only if there appears to be at least a reasonable chance that the inmate will lead a law-abiding life. The treatment and training program in the institution is a vital part of the correctional process and parole is an extension of this training outside the institution. It is not a matter of pampering prisoners but of trying to give as many of them as possible a chance to rehabilitate themselves.

The National Parole Board, composed of a chairman and four members (one woman), was formed in January 1959. It operates under the authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959, replacing the Ticket-of-Leave Act. The Board has jurisdiction over any adult inmate of any prison in Canada convicted of an offence against an Act of the Parliament of Canada; it also has jurisdiction to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle.

The decision of the Board with respect to any one inmate is based on reports it receives from the police, from the trial judge or magistrate and from various people at the institution who deal with him. Reports are also obtained, when available, from a psychologist or psychiatrist and, if necessary, a community investigation is conducted to secure as much information as possible about his family and background, his work record and his position in the community. From these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life.

An inmate need not obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such an application at the institution, or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, investigation is begun and the results presented to the Board for decision. All applications and reports are processed by the Parole Board staff at Ottawa but regional officers, stationed at 22 centres across the country, interview applicants for parole in their respective areas, giving them an opportunity of making verbal representations to a representative of the Board. The regional officers submit to the Board a report of each interview with an assessment of the inmate's suitability for parole.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the regional officer. If he violates the conditions of his parole or commits a further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted. If a parolee commits an indictable offence, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence plus any new term to which he is sentenced for the commission of the new offence. The regional officer may also issue a Warrant of Suspen-

sion and have a parolee placed in custody if it is necessary to prevent a breach of any term or condition of the parole. These officers are thus able to exercise effective and adequate control over all parolees in their respective areas.

During the nine years of its operation the Parole Board has granted parole (of all types) to 20,252 inmates. During the same period 2,201 parolees have been returned to prison. There were 1,096 paroles revoked for misbehaviour or the commission of a minor offence, and 1,105 paroles were forfeited for the commission of an indictable offence. The proportion of parole successes to the number of parole releases was 89.2 p.c.

Section 5.—Police Forces and Crime Statistics

Organization of Police Forces.—The police forces of Canada are organized in three groups: (1) the federal force, which is the Royal Canadian Mounted Police; (2) provincial police forces—the Provinces of Ontario and Quebec have their own provincial police forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) municipal police forces—most urban centres of reasonable size maintain their own police force or engage the services of the provincial police, under contract, to attend to police matters. In addition, the Canadian National Railways, the Canadian Pacific Railway Company and the National Harbours Board have their own police forces.

The Royal Canadian Mounted Police.—The Royal Canadian Mounted Police is a civil force maintained by the Federal Government. It was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories and, in recognition of its services, was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Solicitor General of Canada and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments, it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 140 municipalities (as of Sept. 1, 1968). It is the sole police force in the Yukon and Northwest Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization, which has headquarters in Paris.

Of the Force's 18 divisions, 12 are actively engaged in the work of law enforcement, as are some 46 subdivisions and 709 detachments. The six remaining divisions are "Headquarters", "Depot", "N" and "P" which are maintained as training centres, and "Marine" and "Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the divisional and subdivisional units and the five Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the

Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force in July 1968 was 8,789, including marine constables and special constables, at which time it maintained some 2,636 motor vehicles, 22 aircraft, 58 ships and boats, 121 sleigh dogs, 27 police service dogs and 137 horses.

Quebec Provincial Police Force.—The Quebec Provincial Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of all laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. The Montreal Division has five subdivisions with headquarters at Granby, Hull, Montreal, Rouyn and Sherbrooke; the Quebec Division has four subdivisions with headquarters at Baie Comeau, Chicoutimi, Quebec and Rimouski. There are 112 detachments throughout the province—62 in the Montreal Division and 50 in the Quebec Division. The Force at the end of 1966 had 2,440 regular members—officers, non-commissioned officers and constables.

The Quebec Provincial Police Force is under the command of a Director General who is assisted by an officer holding the rank of Deputy Director General. Each Division is headed by an Assistant Director. A commissioned officer is in command of each subdivision.

Ontario Provincial Police Force.—The Ontario Provincial Police, a Crown force, is the third largest deployed force on the North American Continent, having a total authorized strength of more than 4,450 (1968) uniform and civilian personnel.

The Force is administered from general headquarters at Toronto by a Commissioner who has the rank and status of a Deputy Minister under the Attorney General. Other senior executive officers include two Deputy Commissioners and five Assistant Commissioners. The Force has two principal sides—Operations and Services—which are administered under the supervision of the Deputy Commissioner Operations and the Deputy Commissioner Services, respectively. In turn, five Divisions at the next level are administered by their respective Assistant Commissioners—Assistant Commissioner Field, Assistant Commissioner Traffic, Assistant Commissioner Administration, Assistant Commissioner Staff Services and Assistant Commissioner Special Services.

Specialized Branches under the Special Services Division include Auto Theft, Criminal Investigation, Anti-rackets, Intelligence, Anti-gambling, Liquor Laws Enforcement and Precious Metals Theft.

For policing and administration purposes, the province is divided geographically into 17 districts. In the field, there are 198 detachments controlled through 17 district headquarters located at Chatham, London, Burlington, Niagara Falls, Downsview, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, South Porcupine, Port Arthur and Kenora. Sixteen municipalities are policed under special contract.

Under provisions of the Ontario Police Act, the Force is responsible for: (1) enforcing federal and provincial statutes in those areas that are not required to maintain their own police department; (2) maintaining a traffic patrol on the more than 10,000 miles of King's Highways and 65,000 miles of secondary county and township roads; (3) enforcing the Liquor Licence Act and the Liquor Control Act for Ontario; (4) maintaining a Criminal

Investigation Branch and other specialized branches to assist all other forces in the investigation of major crimes; and (5) assisting other forces by providing additional manpower in the event of emergencies.

Under the Staff Services Division, the Central Records and Communications Branch offers 24-hour-seven-day-week service to all police departments in Ontario on such matters as criminal records, fingerprint records, missing and wanted persons, dry cleaning and laundry mark identification, stolen and recovery property lists.

The Force operates one of the largest frequency modulation radio networks in the world, with 100 fixed radio stations and more than 1,260 radio-equipped mobile units including motorcycles, marine units and aircraft. It also operates the Ontario Police Forces telecommunications network connecting all 17 districts as well as other police departments on a local, national and international basis. Extensions to routine police service are provided by canine, SCUBA and marine-bush rescue units strategically located throughout the province and available to other law enforcement agencies upon request.

In addition to regular constable recruitment, the Force has a cadet program making it possible for qualified young men to create for themselves a career in a long-established police force. An important development in the progress of this Crown force occurred when legislative enactment provided that all ranking officers, from inspector up to and including the Commissioner, receive the Queen's Commission in the same manner as the Armed Forces.

Municipal Police Forces.—Provincial legislation makes it mandatory for cities and towns to furnish adequate municipal policing for the maintenance of law and order in their communities. Also, all villages and townships or parts of townships that have a population density and a real property assessment sufficient to warrant maintenance of a police force, and have been so designated by Order in Council, are made responsible for the adequate policing of their municipalities.

Uniform Crime Reporting.—The present method of reporting police statistics (police administration, crime and traffic enforcement statistics), known as the Uniform Crime Reporting Program, was started on Jan. 1, 1962, and was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police Committee on Uniform Crime Reporting. Previously, the definitions and methods for collecting police statistics were not uniform and the data could not be expressed with consistency on a national, provincial or local basis but, with the development of the Uniform Crime Reporting Program, meaningful statistical aggregates became possible. The police were supplied with a manual of instructions containing standard definitions for the reporting of police administration, crime and traffic enforcement statistics on specially designed statistical forms to be submitted to the DBS.

Police Personnel.—As shown in Table 25, police personnel in Canada numbered 42,541 at the end of 1967, including 35,881 sworn-in policemen, 6,163 other full-time employees serving as clerks, technicians, artisans, commissionaires, guards, special constables, etc., and 497 cadets. The ratio of police personnel per 1,000 population was 2.1 and the ratio of police was 1.8. Provincial ratios for police personnel ranged from 1.1 to 4.6 per 1,000 persons and for police only from 1.0 to 4.3. In 12 selected metropolitan areas there were 15,204 police personnel including 13,226 police and 1,978 cadets and other full-time employees. Total municipal police personnel numbered 24,368 made up of 23,100 in municipal forces, and 1,197 Royal Canadian Mounted Police and 71 provincial police under municipal contracts.

There were three policemen killed by criminal action in 1967 and seven policemen lost their lives accidentally while on duty. Police transport facilities at the end of the year included 6,903 automobiles, 1,018 motorcycles, 720 other motor vehicles, 415 boats, 22 aircraft, 221 horses and 78 service dogs.

Crime Statistics.—Table 27 shows the number of crimes dealt with by the police in 1967, including offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws; offences cleared by charge and otherwise; and the number of adults and juveniles charged. Offences reported or known to the police but proved unfounded are not shown in the table but numbered 59,247, including 51,155 under Criminal Code classifications, 2,456 under federal statutes, 4,137 under provincial statutes and 1,499 under municipal by-laws, excepting traffic.

During 1967, the police reported 70,402 offences committed against the person, including 281 murders, 9,747 rape and other sexual offences, and 60,179 offences of wounding and other assaults (not indecent); all offences against the person resulted in the charging of 26,842 persons 1,800 of them juveniles. During the year there were 471,866 cases of robbery, theft and other offences against property, resulting in 95,980 persons charged, 29,541 of them juvenile males and 2,688 juvenile females; 41,497 cases of fraud, false pretences, forgery, etc.; 2,055 of prostitution; 2,495 gaming and betting; 4,116 offensive weapons; and 193,640 other Criminal Code offences. In addition to the 35,226 federal statute offences reported, 2,584 were under the Narcotic Control Act and 290 under the controlled drug part of the Food and Drugs Act; these two classifications resulted in the charging of 1,875 persons.

Provincial and territorial fire marshals and commissioners reported 2,177 suspected or known incendiary offences, of which 673 were proved unfounded; 395 offences were reported cleared by charge, resulting in 278 adults and 184 juveniles being charged.

The number of motor vehicles stolen was 44,209 (an estimated 600 per 100,000 vehicles registered); 41,649 or 94.2 p.c. of these vehicles were recovered. Police were asked to locate 21,746 missing adults and 33,412 missing juveniles; 20,893 adults and 32,941 juveniles were found. The number of drownings reported by police was 1,374.

¹ Except traffic.² Except traffic, Narcotic Control Act and Food and Drugs Act.

During 1967, police departments in Canada reported 93,235 Criminal Code traffic offences, resulting in 61,940 persons charged, 1,346 of them females. Total charges reported under federal statutes numbered 13,647, provincial statutes 1,589,965 and municipal by-laws 365,183, excluding parking violations; the latter numbered 4,669,881, most of them reported by municipal police. There are certain traffic offences under provincial statutes which are almost identical to those under the Criminal Code. These are shown separately for 1966 and 1967 in Table 28.

The number of traffic accidents reported was 631,396, of which 4,488 involved fatalities, 110,076 resulted in injuries, 358,510 involved property damage of over \$100 and 158,322 involved damage of \$100 or less. There were 5,411 persons killed in traffic accidents, including 3,913 drivers and passengers, 1,299 pedestrians, 162 cyclists and 37 others; persons injured numbered 161,698.

SECTION 2. FEDERAL AGENCIES CONCERNED WITH RESOURCE USE.....	453	Subsection 1. Water Development.....	456
SECTION 3. INTERNATIONAL BOARDS AND COMMISSIONS.....	455	Subsection 2. Lands, Forests and Wildlife..	457

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Trends in Planned Resource Development

Canada's era of settlement ended as the northern areas of the Prairie Provinces came under cultivation in the 1930s. Government policies, previously directed mainly toward the large-scale utilization of natural resources, have evolved toward concern with land use and the socio-economic circumstances of people involved in renewable resource-based industries. Undiscriminating land settlement policies and ill-advised individual choices had resulted in the settlement of some submarginal land throughout Canada, but most notably in the southern areas of Alberta and Saskatchewan, creating requirement for land-use adjustment even before settlement had been completed. Far more significant than this, however, is the technological revolution in agriculture which has occurred during the past three decades concurrently with improvements in transportation and a strong trend toward the concentration in urban centres of a growing population.

Accompanying these changes has been an altered pattern of land use resulting from individual response to economic factors; but the rate of such adjustment has not been concomitant to the magnitude of the socio-economic dislocation in rural areas. Because of this situation, and because of increased concern with forest management, water pollution control, recreational resources and wildlife management, the trend has been for a vast increase in public decision-making with respect to resource management and use. Implicit in this has been the need for improved legislative-administrative organization relative to natural resources.

Early federal investigations of significance to the general problem of organization for resource use were: the Senate of Canada Special Committee on Land Use, established in 1957 and continuing until 1963; the House of Commons Standing Committee on Mines, Forests and Waters; and the National Conference on Reconstruction held in 1945. Notable among several provincial government activities along similar lines is the annual British Columbia resources conference.

One of the most important responses to this need was the "Resources for Tomorrow" Conference held in 1961 to permit examination of problems of resource use and of develop-

* Revised in the office of the Canadian Council of Resource Ministers, Montreal, Que.

ing an organizational framework suited to the modern requirement for integrated, comprehensive resource-use planning for social and economic development. Subsequent to this Conference, the Canadian Council of Resource Ministers, composed of one representative from each province and one from the Federal Government, was established to perform a similar function on a continuing basis, with the aid of a Montreal-based staff.

One of the major specific concerns of the Council has been water resource management. Relevant activities have included a major conference on pollution, held in the autumn of 1966 for the purpose of formulating realistic guidelines to assist federal, provincial and municipal governments in developing programs to meet the challenge of pollution. An investigation was made by the Council of the administration of water resources in Canada; a report was published in 1965 and updated in 1968. A major workshop seminar on water took place in Victoria, B.C., in the autumn of 1968.

In keeping with its general concern for optimal use of available resources, the Council has done investigative and liaison work to ensure that fundamental data are available to guide the allocation of resources to outdoor recreation and has prepared other documents that have assisted in developing liaison between and within governments. One such study was undertaken on the administration of outdoor recreation in Canada. As part of its role in information-gathering, the Council maintains liaison with international bodies concerned with natural resources, and participates in international programs such as the International Hydrological Decade and the International Biological Program.

Constitutionally, administration and disposition of natural resources rest mainly with the provincial governments. Under the British North America Act, fisheries were under federal jurisdiction and the federal and provincial governments shared legislative authority with respect to agriculture, international and interprovincial waters, etc., with federal legislation taking precedence over provincial legislation should conflict arise; however, subsequent interpretations of the Act have established most aspects of control of resources as being matters of provincial jurisdiction. As well, in the years following Confederation, certain provinces by agreement assumed varying degrees of responsibility for administering the fisheries legislation and other federal resources legislation. Within this general framework, the Federal Government has taken certain steps to establish a national resources policy, to co-ordinate the activity of the various federal departments concerned with resources and relevant social and economic problems, to undertake or share in research, and to provide initiative and financial assistance in the establishment of programs of resource adjustment and development. Also, provincial governments have moved significantly to accommodate their administrative structures to the need for integrated, planned resource adjustment and development. Aspects of this trend to accommodate legislative-administrative organization to emerging needs will be apparent in the following descriptions of federal and federal-provincial agencies and programs. In addition, a great number of provincial programs have been instituted or strengthened, furthering the trend toward integration of activities relative to renewable natural resources.

Federal activity in resource conservation programs began before the turn of the century, starting in 1877. This included the work of the now long-disbanded Department of the Interior in the field of surveying and development of water resources in Western Canada. There have been numerous programs under the International Boundary Waters Treaty Act of 1911 undertaken by the International Joint Commission established to fulfil the provisions of the treaty and the confirming Act. Later programs included those conducted under the Prairie Farm Rehabilitation Act which was enacted in 1935 to aid in the rehabilitation of drought-stricken areas of the prairies, the work on the eastern seaboard conducted under the Maritime Marshland Rehabilitation Act of 1948, water development projects under the terms of the Canada Water Conservation Assistance Act of 1953, projects under the Atlantic Development Board Act of 1962, the broad and comprehensive resource development and adjustment programs being undertaken under the terms of the Agricultural and Rural Development Act of 1966 (formerly Agricultural Rehabilitation and Development Act of 1961), and the Fund for Rural Economic Development Act in 1966. Over

this period many projects of varying nature and scope have been undertaken under legislation such as the above and under the terms of reference of the federal and provincial government departments and agencies concerned with resource development—all toward the basic objective of achieving more effective utilization of Canada's land and water resources and the provision of a greater degree of economic stability and equitability for the rural areas of the country.

Section 2.—Federal Agencies Concerned With Resource Use*

Numerous agencies of the Federal Government have a more or less direct concern with renewable resources. Functions vary from academic research to direct manipulation of resources in certain geographical areas. Direct action, however, is limited mainly to areas under federal jurisdiction—the Northwest Territories, Indian reservations, limited federal forest preserves, National Parks, certain international parks and waterways, certain aspects of fisheries, matters relative to public health, navigation, and certain aspects of agriculture. More usual by far than direct action by the Federal Government are federal-provincial agreements under which the Federal Government shares the costs of programs. Such aid is often conditional on the province agreeing to carry out the program in accordance with criteria established by the Federal Government. The capacity of the Federal Government to establish cost-sharing programs is inherent in its broad fiscal powers and in its research and data-gathering programs that provide a basis for broader assessment of issues and alternatives.

Federal agencies whose activities impinge fairly directly on renewable resource development and use are as follows:—

- CANADA DEPARTMENT OF AGRICULTURE—Research Branch, Economics Branch, Prairie Farm Rehabilitation Administration, and Information Division
- DEPARTMENT OF FISHERIES—Conservation and Protection Service, Resource Development Service, Information and Consumer Service, and Economics Service
- DEPARTMENT OF FORESTRY AND RURAL DEVELOPMENT—Directorate of Program Co-ordination, Information and Technical Services Division, Forest Products Research Laboratory, ARDA Administration, Maritime Marshlands Rehabilitation Administration, and Eastern Rockies Forest Conservation Board
- DEPARTMENT OF INDIAN AFFAIRS AND NORTHERN DEVELOPMENT—Council of the Northwest Territories, Natural and Historic Resources Branch (including the Canadian Wildlife Service), Northern Administration Branch, and Indian Affairs Branch
- DEPARTMENT OF PUBLIC WORKS—Harbours and Rivers Engineering Branch, Development Engineering Branch and Economics Studies Branch
- DEPARTMENT OF TRANSPORT—Marine Works Branch, Marine Hydraulics Branch, and Meteorological Branch
- DEPARTMENT OF NATIONAL HEALTH AND WELFARE—Occupational Health Division, and Public Health Engineering Division
- DEPARTMENT OF FINANCE—Economic Analysis and Government Finance Division, Resources and Development Division, and a Division concerned with Taxation, Federal-Provincial Relations and Pensions and Social Insurance
- DEPARTMENT OF VETERANS AFFAIRS—Veterans' Land Administration
- DEPARTMENT OF ENERGY, MINES AND RESOURCES—Four Departmental Sectors are concerned with mines and geosciences, mineral development, energy development, and water, including the Geological Survey of Canada, Surveys and Mapping Branch, Marine Sciences Branch, Inland Waters Branch, and Policy and Planning Branch
- NATIONAL RESEARCH COUNCIL OF CANADA
- NATIONAL ENERGY BOARD
- ECONOMIC COUNCIL OF CANADA
- ATLANTIC DEVELOPMENT BOARD.

* As at December 1968, before the Government Reorganization Act 1969 was passed (see Appendix).

Various Crown corporations, credit agencies, advisory committees and boards, and quasi-governmental organizations also have interests in the fields of resource development, including:—

FARM CREDIT CORPORATION
 CANADIAN COMMITTEE ON FRESHWATER FISHERIES RESEARCH
 FISHERIES RESEARCH BOARD OF CANADA
 NORTHERN CANADA POWER COMMISSION
 ADVISORY COMMITTEE ON NORTHERN DEVELOPMENT
 ADVISORY COMMITTEE ON WATER USE POLICY
 CENTRAL MORTGAGE AND HOUSING CORPORATION
 NATIONAL HARBOURS BOARD
 ST. LAWRENCE SEAWAY AUTHORITY
 NORTHERN TRANSPORTATION COMPANY
 INTERDEPARTMENTAL ADVISORY COMMITTEE ON FORESTRY STATISTICS
 INTERDEPARTMENTAL CO-ORDINATING COMMITTEE FOR ARDA
 CANADIAN COUNCIL ON RURAL DEVELOPMENT
 INTERDEPARTMENTAL COMMITTEE ON RESOURCES
 NATIONAL COMMITTEE FOR THE INTERNATIONAL HYDROLOGIC DECADE
 CANADIAN COMMITTEE OF THE INTERNATIONAL BIOLOGICAL PROGRAM.

The Dominion Bureau of Statistics has, of course, functions relevant to nearly all aspects of the national life, including resources. The above agencies are not identified with a particular department and function more or less autonomously but are usually associated with a Minister of the Crown for purposes of reporting to Parliament (see pp. 108-110). Although each of these agencies carries out programs bearing on the use and development of natural resources, direct unilateral action is unusual except relative to lands and waters under the jurisdiction of the Federal Government. Major exceptions are the Prairie Farm Rehabilitation Administration programs and significant federal programs for the conservation and development of the various fisheries resources.

Major items of federal legislation relative to renewable resources include:—

The Department of Agriculture Act
 The Prairie Farm Rehabilitation Act
 The Farm Credit Act
 The Department of Fisheries Act
 The Forestry Development and Research Act
 The Agricultural and Rural Development Act
 The Fund for Rural Economic Development Act
 The National Parks Act
 The Migratory Birds Convention Act
 The International River Improvements Act
 The Dominion Water Power Act
 The Canada Water Conservation Assistance Act
 The Atlantic Provinces Power Development Act
 The Navigable Waters Protection Act
 The Veterans' Land Act
 The Economic Council of Canada Act
 The National Energy Board Act
 The National Harbours Board Act
 The St. Lawrence Seaway Authority Act
 The Resources and Technical Surveys Act
 The Fisheries Development Act.

Section 3.—International Boards and Commissions

The continental context of Canadian resource management is implicit in the purposes of the various international boards and commissions in which Canada participates. Of the 35 or more such boards and commissions, some 25 are concerned with water and most of the remainder have to do with fisheries.

THE INTERNATIONAL JOINT COMMISSION was established to fulfil the provisions of the International Boundary Waters Treaty of 1909 between the United States, Great Britain and Canada. Three commissioners were appointed by the President of the United States and three by the Government of Canada. The Commission deals with the use, obstruction and diversion of boundary waters and rivers crossing the International Boundary. It conducts investigations on water use problems with international implications and reports its findings with recommendations to both governments.

International boards of control which report to the International Joint Commission are: a 10-member International St. Lawrence Board of Control, concerned with levels of Lake Ontario and the regulation of outflow from the lake; a two-member St. Croix Board, concerned with water levels and supervision of dam construction; the Lake of the Woods Board, the Lake Superior Board, the Rainy Lake Board and the Kootenay Board, all of which are concerned with water levels; a two-member Columbia River Board, concerned with the effects of the Grand Coulee dam; a four-member Souris River Board, concerned with allocation of water; and a five-member Niagara Board, concerned with levels of Grass Island Pool and the Lake Erie ice boom. Functions similar to those of the Boards are carried out by two accredited officers relative to measurement and apportionment of waters of the St. Mary and Milk Rivers. Also reporting to the International Joint Commission are five international engineering boards for the Saint John, St. Croix, Souris and Red, Pembina and Columbia Rivers. A seven-member Technical Advisory Board on Air Pollution is concerned with air pollution by ships plying the Detroit River. An Advisory Board on Control of Pollution of Boundary Waters, reporting to the International Joint Commission, is concerned with the connecting channels of the Great Lakes, and other boards concerned with pollution are: the Advisory Board on Pollution Control-St. Croix River, the International Red River Pollution Board, the International Lake Erie Water Pollution Board and the International Lake Ontario-St. Lawrence Water Pollution Board. The eight-member International Great Lakes Levels Board, concerned with investigation and study of water levels of international or boundary waters, also report to the International Joint Commission.

THE INTERNATIONAL NORTH PACIFIC FISHERIES COMMISSION, composed of four members each from Canada, the United States and Japan, operates to fulfil the terms of the International Convention for the High Seas Fisheries of the North Pacific Ocean, the objective of which is to achieve maximum sustained yield in non-territorial waters by co-ordination of the studies necessary to determine appropriate application of treaty principles. THE GREAT LAKES FISHERIES COMMISSION, composed of two national sections of three members each, formulates and co-ordinates research programs and recommends programs for the eradication or control of sea lamprey populations. Responsibility for Canada's treaty obligations is shared by arrangement between the Federal Government and the Government of Ontario. THE NORTHWEST ATLANTIC FISHERIES COMMISSION operates under the International Convention for the Northwest Atlantic Fisheries signed by Canada, the United States, the United Kingdom, France, Spain, Denmark, Portugal, Iceland, Norway, Italy, East Germany and the Soviet Union. All contracting governments are represented on the Commission and panels have been established with jurisdiction over defined areas of particular interest to some signatories. The Commission has no regulatory powers but conducts scientific investigations and recommends measures to maintain stocks of fish. THE NORTH PACIFIC FUR SEALS COMMISSION operates under the Interim Convention on Conservation of North Pacific Fur Seals signed by Canada, the United States, Japan and the Soviet Union, undertaking research, recommending enforcement measures

required to eliminate pelagic sealing on the high seas, and overseeing the apportionment of skins from the Pribilof, Commander and Robben Islands. THE INTERNATIONAL WHALING COMMISSION, composed of representatives of Australia, Brazil, Argentina, France, South Africa, the United States, the United Kingdom, Canada, Norway, New Zealand, Iceland, Japan, Panama, Mexico and Denmark, has power to amend whaling rules and regulations of the International Convention, and to recommend new regulations with respect to the conservation and use of the resource. THE ROOSEVELT-CAMPOBELLO INTERNATIONAL PARK COMMISSION is concerned with the administration and development of the Campobello Island estate of the late Franklin D. Roosevelt as an international park.

Section 4.—Federal and Federal-Provincial Resource Development Programs

Subsection 1.—Water Development

Since 1935, the Prairie Farm Rehabilitation Administration (PFRA) has provided engineering and financial assistance for some 91,000 small dams and dugouts (small artificial ponds for water collection) to supply water for livestock, irrigation and domestic use. In the main, such works serve individual farmers but some serve groups of farmers or communities. The PFRA also provides free engineering services and contributes toward the cost of construction of community projects on larger watersheds.

Six minor irrigation projects in Saskatchewan provide water for 125,000 acres of land. Major irrigation projects include the St. Mary Irrigation Project undertaken jointly in 1946 by the Federal Government and the Government of Alberta to irrigate approximately half a million acres. The Bow River Project, also in Alberta, is being renovated and extended by the PFRA to yield an irrigation potential of 240,000 acres. The South Saskatchewan River Development Project, undertaken by the PFRA and completed late in the summer of 1967, involved the building of a main dam 210 feet high and 16,700 feet long—the largest rolled earth dam in Canada and one of the largest in the world. Located between the towns of Outlook and Elbow, this dam will create a reservoir 140 miles long with a capacity, when filled, of 8,000,000 acre feet of water (usable storage of 2,700,000 acre feet). The project will provide water to irrigate 500,000 acres of land, the power potential is 475,000 kilowatts, and the artificial lake will have considerable recreation potential. A second, smaller dam adjacent to the height of land between the South Saskatchewan and the Qu'Appelle Rivers will divert water into the Qu'Appelle-Assiniboine system to provide much-needed water supplies for irrigation and the considerable urban areas of the watershed. The cost of developing the main reservoir was \$117,000,000, of which the provincial government contributed \$25,000,000.

Land reclamation projects have been carried out by the PFRA in Manitoba along the Saskatchewan and Pasquia Rivers near The Pas, the Assiniboine River between Portage la Prairie and Headingley, at various points in the Interlake Region, and along the Northwest Escarpment. The Assiniboine River project includes the creation of a reservoir near Shellmouth and construction of a diversion canal near Portage la Prairie to carry floodwaters to Lake Manitoba.

Under the provisions of the Atlantic Development Board Act of 1962, amended in 1963 and 1966, a \$150,000,000 Atlantic Development Fund was established to support projects which would contribute to the growth and development of the economy of the Atlantic region. The Act also requires the Board, in consultation with the Economic Council of Canada, to prepare an over-all co-ordinated plan for the promotion of the economic growth of the region. Among the projects initiated during the Board's first years of operation were a number relative to water use for power production and for industry, the most notable being a \$20,000,000 grant toward the \$120,000,000, 600,000-kilowatt Mactaquac dam in New Brunswick and a similar grant toward Newfoundland's \$88,000,000, 225,000-kilowatt (first stage) Bay d'Espoir hydro-electric project. The Board also assisted in develop-

ing water supplies to meet the needs of industries—mainly fish processing plants—in some 35 communities, and committed \$2,000,000 toward abatement of industrial pollution in inland waters of the region. As part of its planning activities, the Board engaged consultants to carry out a \$1,500,000 study on the supplies of water in the region and the demands that are likely to be made upon them up to 1981 and beyond. (See also Chap. XXIV, Sect. 6, Subsect. 2.)

Under the Canada Water Conservation Assistance Act of 1953, which enables federal participation up to 37½ p.c. of the cost of dams and other major water projects undertaken by the provinces, seven water control programs—the Halton region, Metropolitan Toronto region, and the Upper Thames River conservation programs in Ontario, the Red River Community Dyking program in Manitoba, and the Alberni, North and West Vancouver, and Hastings Creek flood control schemes in British Columbia—are being assisted. The over-all cost of these programs is estimated at \$42,000,000, of which the Federal Government is committed to \$16,500,000.

Other federal and federal-provincial programs and agencies concerned with water are: the recently completed Greater Winnipeg Floodway program, to construct a 30-mile floodway past Winnipeg at a total estimated cost of \$63,000,000, of which the Federal Government will share about \$43,700,000; the Prairie Provinces Water Board, to recommend an allocation of water from interprovincial streams; the Saskatchewan-Nelson Rivers Basin Board, the four-year \$15,000,000 water supply study of the Saskatchewan-Nelson Rivers

Five towers on the now completed Gardiner Dam on the South Saskatchewan River contain water-flow control machinery and power is flowing from the plant at the foot of the dam. A system of canals and storage reservoirs ensures a supply of water from the lake that extends 140 miles above the dam for the first block of irrigated land on the east side of the river and for mines and communities south and east of Saskatoon.

basin; the Atlantic Tidal Power Programming Board to carry out studies for the development of the power potential of the tides of the Bay of Fundy; a co-ordinated study of Ontario rivers flowing into James Bay and Hudson Bay, to assess the quantity, quality and present and future requirements for these waters, and suggest alternative possibilities for their use; a 10-year Fraser River agreement between British Columbia and the Federal Government to provide flood protection on the Fraser Delta; and a considerable number of varied hydrologic and water-quality studies conducted by the Department of National Health and Welfare, the National Research Council, the Department of Transport, the Department of Energy, Mines and Resources, the Department of Fisheries and Forestry, the new Department of Regional Economic Expansion, and several other agencies.

In 1967 a milestone was reached in the area of co-operative water research with the establishment of the Canada Centre for Inland Waters at Burlington, Ont. Three federal agencies are responsible for the development of the centre—the Department of Energy, Mines and Resources, the Fisheries Research Board, and the Department of National Health and Welfare. The centre is designed for interdisciplinary research into such problems as pollution, fluctuating water levels, and water allocation. It will bring together representatives from governments, industries and universities both in co-operative research and in the planning of programs for the centre.

Finally, in the face of divided jurisdiction in the area of water resources and the increasing demand for and desirability of comprehensive, multi-purpose river-basin development, the Federal Government is planning to introduce new water resources legislation under the title of the Canada Water Act. This legislation should do much to establish the basis for federal-provincial co-operation and for the delineation of a national water policy.

Subsection 2.—Lands, Forests and Wildlife

The Prairie Farm Rehabilitation Act of 1935 provided for rehabilitation of areas subject to drought and wind erosion in the Prairie Provinces and in 1937 was amended to broaden its scope to include land utilization and resettlement. In the main, the PFRA's land-use programs have involved the establishment of community pastures on land sub-marginal for cereal crop production, and over the years this program has resulted in the establishment of 90 operating community pastures, with four more under construction, totalling 2,500,000 acres, at a total cost of \$11,000,000. The PFRA also operates a tree nursery at Indian Head in Saskatchewan which distributes up to 10,000,000 trees yearly free to farmers for farm and field shelterbelts.

The Agricultural Rehabilitation and Development Act, proclaimed in 1961, arose out of recognition of a national interest in achieving better land use, improving the viability of farm units at present uneconomic, and of improving employment and income opportunities in rural areas. In many areas of Canada, income is unacceptably low and land use faulty or inefficient. To some considerable degree these economic, social and conservation problems have been caused by farm mechanization which places smaller, less-mechanized farmers at a disadvantage; a notable symptom of this is the decrease in the number of farms in Canada from about three quarters of a million in 1931 to less than half a million (431,000 in 1966).

The Act, amended in 1966 as the Agricultural and Rural Development Act and supplemented by the Fund for Rural Economic Development Act of 1966, is enabling legislation intended to be complementary and supplementary to existing federal and provincial legislation in respect of renewable resources and rural social and economic development; to aid in correlation and expansion of existing programs; and to fill gaps. As such, it has considerable potential as an instrument for programs of alternate land use, soil and water conservation, development of rural income and employment opportunities, and for research. ARDA is a federal-provincial program which operated from its inception to Mar. 31, 1965 under a federal-provincial General Agreement, and after that time under the Federal-Provincial Rural Development Agreement covering the period 1965-70. Under the General Agreement, ARDA approved projects involving a federal share totalling \$34,517,000 of

which \$13,484,000 was expended during the period. The federal share is usually in the order of 50 p.c. of total cost. The Federal-Provincial Rural Development Agreement 1965-70 provides for the expenditure of \$125,000,000 during that period. In addition, \$300,000,000 is provided under the Fund for Rural Economic Development Act to finance major projects in special rural development areas.

To the end of March 1968, \$135,233,000 had been spent on 1,051 projects under the second ARDA agreement. The federal share of this was \$65,269,000. Examples of ARDA projects are the creation of a comprehensive development plan for the Edson area of Alberta, the development of irrigation and water supply in British Columbia, the provision of community pastures in Saskatchewan, and small projects on river-course development in Quebec. Four projects for comprehensive regional development are at present

Federal and provincial pollution control agencies have required the pulp and paper industry, through research and changed processing, to tackle the air and water pollution resulting from its operations.

Work on the problem of air pollution from kraft mills, being conducted by the Pulp and Paper Research Institute of Canada, includes studies of new processes that will eliminate the malodorous sulphur compounds in the exhaust gases. →

A plastic pipeline, being floated into place, will carry effluent from the kraft mill at Pictou Harbour, N.S., to a large lagoon where it can be settled and treated before being discharged.

under way—the Northeast and the Mactaquac projects in New Brunswick, the Gaspé, Lower St. Lawrence, Magdalen Islands project in Quebec, and the Interlake project in Manitoba. Three additional studies are under consideration—one on Prince Edward Island, one on northeastern Nova Scotia and one on the west coast of Newfoundland.

Since 1935 co-operative Soil Surveys staffed by soil specialists from federal and provincial governments and universities, and supported by all senior governments, have done extensive soil classification work. The Soil Surveys have mapped most of the agricultural land in Canada, classifying soils according to their inherent characteristics. In the Canada Land Inventory under the ARDA administration, further land classification is being done. The Inventory will map present land use and assess land capability for such different uses as agriculture, forestry, recreation and wildlife in and adjacent to the settled portions of Canada. The vast amount of information obtained will be stored on computer tapes, analysed and published in map or other form in such a way that the Inventory will become a working tool in resource planning and rural development programs throughout Canada. Approximately 100 agencies of the 11 senior governments are included in the Inventory, as well as numerous universities, non-government organizations and private companies or individuals. By late 1968, the present land use phase of the Inventory was almost completed and substantial progress had been achieved in the agriculture, forestry, wildlife and recreation phases. Capability maps at a scale of 1:250,000 may be obtained from the Queen's Printer as they become available.

In addition, other federal agencies and federal and federal-provincial programs are concerned with land and land-based resources. The Department of Indian Affairs and Northern Development engages in such diverse activities as the administration of National Parks, the administration of the resources of the Yukon and Northwest Territories and the administration of wildlife, including a considerable research program relative to wildlife and the administration of the Migratory Birds Convention Act. Among the programs are: the Wildlife Inventory Program in which joint studies are carried out informally, e.g., the waterfowl inventory conducted by the Federal Government, the United States Fish and Wildlife Service, Newfoundland and the five westernmost provinces; the caribou inventory by the Federal Government and the Governments of Alberta, Saskatchewan, Manitoba, Quebec and Newfoundland; the Trans-Canada Highway compounds and picnic areas program established in 1958 without Ontario and Quebec; a significant program of acquisition of wetlands waterfowl habitat areas; and Fur Conservation Agreements between the Federal Government and Ontario, Manitoba and Saskatchewan for the construction of water control works, mainly to improve muskrat and migratory bird habitat. The Roads to Resources program, carried out under agreements with the provinces made between 1958 and 1960, is a substantial federal-provincial program involving construction of access roads in Canada's "pioneer fringe". Forest products research, a joint federal-provincial-industry program of spraying to control budworm infestation of spruce forests in New Brunswick, and various other programs of research and forest stand improvement are in effect.

Notwithstanding the magnitude of these federal and federal-provincial programs, and the large number of federal agencies concerned with resource use and development in Canada, it should be noted that the provincial governments assume a role which, in total, is many times larger than that of the Federal Government.

Section 1.—Agricultural Trends and Highlights in 1968

The Canadian farmer continues to become more efficient in the production of the raw material for food and feed to fulfil much of the requirements of the Canadian population and assist with those of other countries. Canada exports approximately \$1,800,000,000 worth of farm products each year to some 130 countries, and in 1967 retained its position as the fourth largest exporter of such products.

Experience has demonstrated that a healthy agricultural industry is essential to the health of the Canadian economy. Even though the importance of agricultural exports has declined relative to other exports, the impact of farm production on industrial employment has steadily expanded. Manpower required on the farms themselves has fallen with the advance of mechanization but labour used in the industries associated with farm production has grown rapidly. The farm machinery industry employs more than 12,000 workers who receive close to \$70,000,000 annually in pay; the feed industry employs about 8,800 workers receiving annually about \$40,310,000 and a fair proportion of payrolls in the petroleum, rubber, automotive, hardware, paint and electrical plants are based on farm customers. The country's many manufacturing plants engaged in the processing of foods of Canadian origin employ an estimated 215,000 persons.

During the past decade (1956-66) the number of farms in Canada declined from 575,015 to 430,522 but the average farm size increased from 302.5 acres to 404 acres and total productivity on the farm rose by some 67 p.c. In the five years 1961-66, the capital value of all farms rose almost 50 p.c. to \$19,000,000,000 and in the same period the number of farms with sales in excess of \$15,000 a year doubled to 50,800.

Efficiency in farm production at the primary level is passed on to the customer; it is estimated that 22 p.c. of the take-home pay of Canadians is spent on food, which is probably

the lowest percentage in the world and especially significant when account is taken of the high standard of food consumed. The hourly pay of a factory worker in 1967 purchased far more food in 1967 than it did 20 years earlier. Conversely, the percentage of the consumer dollar accruing to the farmer has been declining and average farm incomes have not increased as have those of workers in other sectors. For this reason the federal treasury maintains a price support policy to guard against sudden price changes that could put the farmer out of business and bolsters this with crop insurance and long-term loans for farmers.

In 1967 the index of farm production was 13 p.c. below the record level of 182 reached in 1966, the decline being attributed to a substantially smaller prairie grain crop and to lower output of potatoes, sugar beets, flaxseed, cattle and dairy products. On the other hand, cash receipts from farming operations reached a high of \$4,379,000,000 in 1967, a figure 3.3 p.c. above the previous record set in 1960, attributable to higher returns from tobacco, cattle, calves and dairy products and greatly increased participation payments on previous years' grain crops. Net income was, of course, considerably smaller than this; it was estimated at \$1,529,000,000, 1.5 p.c. below the average for 1962-66 and 21.2 p.c. below the all-time high of 1966. This net income takes into consideration the value of changes in farm-held inventories of livestock and field crops between the beginning and the end of the year. Realized net farming income, which takes no cognizance of such changes, was \$1,664,000,000, only 4.1 p.c. below 1966.

Farm operating expenses and depreciation charges advanced, partly because of the higher prices paid by farmers for goods and services. Shipments of manufactured livestock and poultry feeds increased again and prices also rose. Petroleum product prices and expenditures for machinery repairs and parts were up as were wage rates in agriculture. The farmers' outlay for debt servicing continued upward.

The Federal Government encouraged farmers to seek unity in their representations for solution of agricultural problems and to use producer marketing board machinery to improve their lot. A federal commission on the operation of the farm machinery industry and another seeking to define the objectives of the agricultural industry were at work. With these probes into the future the Government also accented the need for more research to be brought to bear on current production and marketing problems. The successful beginnings of the Canadian Dairy Commission promised an end to burdensome dairy product surpluses and a higher income for dairy farmers.

Agricultural Highlights in 1968

In 1968 the Canada Department of Agriculture laid the foundations for many basic changes—both international and national.

On the international scene, 21 nations agreed to shift the emphasis from price support programs to policies that would promote basic structural changes in the agricultural industry, a move that could reverse the trend to spiralling increases in product subsidies and import restrictions and should benefit Canadian agriculture, especially in the export market.

Canada began the year by pledging \$21,000,000 toward the World Food Programme for 1969 and 1970, one quarter in cash and the remainder in foodstuffs. On the national scene, several policy and assistance changes were made.

A federal-provincial cost-sharing program of crop insurance for farmers in Quebec Province was approved, the Federal Government to pay half the cost of the farmer's insurance premiums and share the administration costs of the scheme protecting forage and grain crops for livestock feeding.

Construction was started in March on a \$3,500,000 research laboratory at Harrow, Ont., and the new \$1,700,000 Vineland Research Centre for control of fruit pests was opened in May.

Importation of breeding cattle from France and Switzerland was continued with the objective of creating self-sustaining herds of a type that will benefit the beef industry in this country; permits for bringing in 238 head were issued. Federal assistance was given to potato growers in compensation for two years of low prices. Through the Agricultural Stabilization Board, growers were given a \$25-an-acre subsidy up to a maximum of \$400. A deficiency payment of 27.9 cents a pound was made for certain grades of wool marketed in the year ended Mar. 31, 1968; \$924,000 was shared by 18,000 producers. The price support program for lamb and wool for 1968-69, aimed at encouraging greater production, set new levels at \$18.80 a hundredweight for lamb and 60 cents a pound for wool.

The Canadian Dairy Commission program for 1968-69 consisted of continued market price supports for major dairy products and a direct subsidy to manufacturing milk and cream shippers under quotas established by the CDC. Together they provided support for the farmer equal to \$4.85 per hundredweight of milk at the factory. The cost of exporting surplus dairy products was charged to producers through a deduction made in advance from their gross subsidy, to emphasize the necessity of limiting production to domestic market needs. Producers excluded from the quota system because of low production will receive a phasing-out payment. The quota policy for 1968-69 permitted increased deliveries of milk by 37,000 small and medium manufacturing milk and cream shippers who exceeded their quotas in the previous year, the object being to help them build up more profitable units. Farmers who made no deliveries on their quotas were not given quotas for the current year and those whose quotas were as high as 10,500 pounds of butterfat level were not given additional quotas.

The Agricultural Stabilization Board announced a price support of 34 cents a dozen for Grade A Large eggs in a program that included Extra Large and Mediums. The support price applied to a maximum of 10,000 dozen eggs and a minimum of 1,000 dozen marketed in the year. The Board purchased eggs to help maintain the price obtained by producers and then converted the eggs to powder for use in the World Food Programme.

A grant of \$60 an acre based on 1967 plantings was approved for payment to Ontario sugar-beet growers to assist them in changing to other crops following the closure of sugar

Provincial and federal officials at the Agricultural Outlook Conference held in Ottawa late in 1968. At these conferences, sponsored annually by the Canada Department of Agriculture, experts outline the production and price outlook for the coming year.

refinery facilities. Sugar-beet production elsewhere in Canada was supported at a national average level of \$15.98 per standard ton to protect growers against serious declines in world prices.

In June, long-term loans were made available to fur farmers under the Farm Credit Act, mainly to assist mink breeders to compete more effectively in the sale of furs.

Changes in the Record of Performance program for cattle allowed for the entry of about 10,000 unregistered cattle into the program and regulations were changed to allow the use of several milk-measuring devices in pipeline operations.

A new federal grading system for hogs, to be implemented on Jan. 1, 1969, was announced following consultations with the Canadian Swine Council and the Meat Packers Council of Canada. The change placed special emphasis on a higher percentage of lean pork, promising greater rewards to the producer of high-quality hogs and a better product for the consumer. The beef industry began a review of its grading system which could result in equally important changes.

Major changes in the Record of Performance testing system for swine were recommended by the National Advisory Board for ROP Swine, endorsed by all provinces and put into effect in September. The new policy meant phasing-out the litter test and adopting a Boar Performance test (back fat thickness and evaluation of weight gain to a specific age). It also introduced a sire progeny test at test stations and made it available to breeders of unregistered stock of identifiable ancestry. All changes were designed to assist breeders to select within their breeding herd for qualities best meeting the requirements of the new grading system.

A computerized National Farm Management System, under development by the Federal Government in co-operation with the provinces and universities, will go on a volume test basis in 1969. It is intended to assist farmers in keeping and analysing their records to improve their management practices and incomes.

The Farm Credit Act and the Farm Improvement Loans Act were amended by Parliament to increase loan maximums and interest rates were tied to the Government's cost of obtaining money.

A value for duty was placed on United States corn imports, effective Oct. 30, 1968, ensuring that Ontario corn prices would not fall below the American support price.

Section 2.—Federal Government in Relation to Agriculture*

The Canada Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Department of Indian Affairs and Northern Development.

* Prepared (September 1968) under the direction of S. B. Williams, Deputy Minister of Agriculture, Ottawa.

Subsection 1.—Services of the Canada Department of Agriculture

The activities of the Canada Department of Agriculture (CDA) fall into three broad groups: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests and the registration of chemicals and other materials used to achieve that end and toward the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover some of the sphere of soil and water conservation, price stability, provision of credit, rural rehabilitation and development, and crop insurance and income security in the event of crop failure.

The Department has five main Branches—Research, Health of Animals, Economics, Production and Marketing, and Administration—and its organization includes a number of smaller units—the Agricultural Stabilization Board which is a departmental Crown corporation (see p. 469), the Agricultural Products Board, Crop Insurance (p. 470), and the Information Division. Agencies closely allied with the Department and responsible to the Minister of Agriculture are the Farm Credit Corporation (p. 473), the Canadian Dairy Commission (p. 470), the Board of Grain Commissioners (Part II of Chapter XXI), and the Canadian Livestock Feed Board (p. 475).

Research Branch.—The research activities of the Department are undertaken mainly by the Research Branch at some 55 centres across the country, although important contributions are also made by the Economics Branch (p. 468), the Health of Animals Branch (p. 467), and the Grain Research Laboratory operated by the Board of Grain Commissioners for Canada (p. 467). About 1,000 research workers are employed by the Department and their specialties run the gamut of scientific agriculture from genetics to engineering. Most of the research is directed from Research Branch executive headquarters at the Central Experimental Farm in Ottawa. Also located there are the statistical, engineering and analytical chemistry research services, together with six of the eight institutes for research on animals, food, entomology, cell biology, plants, soils, biological control and pesticides. Throughout the 10 provinces there are 26 research stations, 13 experimental farms, a laboratory and a number of substations.

Hercules, a new Durum wheat licensed in early 1969, was developed at CDA's Research Station in Winnipeg after ten years of breeding. It is an improvement on other commercial varieties in maturity, disease resistance, quality and straw length and will set the quality standard for future Canadian breeding programs.

Originally, the main task of the experimental farms was to determine the potential of the various combinations of soil and climate for producing crops and maintaining livestock, and to develop and test varieties, breeds and management practices suitable for each area. Today's federal research program continues with this early work but is designed to meet the specific needs of domestic and export markets.

Canada's main crop for generations has been wheat, the efficient production of which stems directly from the help the grain growers have received from research. Without the new varieties produced by plant breeding, it would be unprofitable to grow wheat on large areas of the wheat belt. Comparable improvements in oats and barley have enabled the farmer to continue to grow these valuable cereals despite the incidence of pests and diseases, drought and short growing seasons. Research has also augmented livestock returns to farm incomes by developing better grasses and legumes adapted to the various regions of Canada that differ in climatic and soil conditions. Research in other crops, notably oilseed plants and potatoes, has resulted in new varieties with resistance to diseases, with improved quality and suitability for specific processing, and adapted to the different growing areas. More than 80 new varieties of crops have been developed and put into commercial production in the past 10 years. Research into the storage and processing of crops has been accelerated and has led to valuable innovations in the fruit and vegetable industries and in the protection of stored grain.

A mechanical shaker for harvesting fruit developed at the federal Summerland Research Station in British Columbia. Fruit falls into the canopy and is gently lowered into bins.

In livestock, the main lines of progress are through genetics and nutrition and the main subjects are dairy and beef cattle, pigs, poultry and sheep. The advantages of selective breeding have been evidenced through the records of animals tested for many years. The CDA developed a new breed of hog, the Lacombe, which is proving a worthy addition to the old-time breeds. Romnelet, a range-type sheep, was also an outcome of federal breeding programs. Crosses of several meat-type strains of chickens made at federal institutions have led to performance superior to that of pure strains. Extensive

studies on the causes and control of diseases and parasites of livestock, fur bearing animals and wildlife are carried on with the result that epidemic outbreaks rarely occur and when they do are quickly suppressed. Live animals and meats must attain the high standards required in the export trade.

A matter of constant concern is the protection of crops from diseases and pests. Chemicals have proved to be potent weapons but there is also a continuing search for other control methods. Many weeds can be eradicated by proper tillage and cropping methods and a few have been controlled by insects that feed on them exclusively and destroy them. Fungus diseases may be checked by developing resistant varieties of crops. In biological control, parasites or predators are produced and released to prey on certain insects and eliminate them. Sterilization of male insects by radiation or chemical means is another method used to reduce insects of various kinds.

An area of special interest is that of farm mechanization in which there has been tremendous development in the past 60 years. The Research Branch is expanding its studies in this field at the Engineering Research Service in Ottawa and in the Maritime Provinces, and universities are being encouraged to study the subject more intensively.

Soil surveys are conducted in all provinces in co-operation with provincial departments of agriculture and the universities. Soils are examined and classified as to their chemical and physical characteristics and potential productivity. Soil fertility is under study at many experimental farms and at research stations and is undertaken in close co-operation with the universities. Agrometeorology, a relatively new science, is opening new opportunities to growers to make the best use of the heat, light and moisture available in each farm area.

Although most agricultural research is carried out by the CDA, important programs are also undertaken by the provincial governments and agricultural colleges. Close liaison exists between these different agencies to avoid duplication and to ensure that the services offered by the Federal Government through provincial extension officers are of the kind needed by farmers. Federal research establishments across the country are represented on provincial committees concerned with field crop varieties, fertilizer practices, soil fertility, spray programs, field crop and animal management, and horticulture. Such collaboration ensures that new practices discovered by research are brought quickly to the attention of extension groups to be recommended for local use.

The Grain Research Laboratory.—This Laboratory provides scientific services required in the administration of the Canada Grain Act. It carries out annual studies of the quality of the new crop cereals, maintains a continuous check of the quality of cereal grains as they move forward from the farm to marketing positions and plays a major role in testing (prior to licensing) the quality of plant breeders' varieties of various cereals. A comprehensive program of basic and applied research relating to the quality of Canadian cereal grains is an important task of the Laboratory.

Health of Animals Branch.—This Branch administers the Animal Contagious Diseases Act, the Meat Inspection Act and the Humane Slaughter of Food Animals Act, and operates laboratories for the study of animal diseases. Contagious diseases of animals are controlled through preventive measures of inspection and quarantine of imported livestock and restricted commodities such as meat, farm products and other possible sources of infection; through conducting disease eradication programs, notably of bovine tuberculosis, brucellosis and Johne's disease; through the control and eradication of serious animal diseases when outbreaks occur; and through inspection and certification as to health of livestock for export. The Animal Pathology Division consists of the Animal Diseases Research Institute at Hull, Que., the Animal Diseases Research Institute (Western) at Lethbridge, Alta., and seven branch laboratories; these establishments conduct research and investigations on infectious diseases of animals and produce the biological products required in their control. The Division also provides diagnostic services for

diseases of domestic and wild animals and conducts a training program for departmental officers and veterinarians from other lands. The Meat Inspection Division conducts ante-mortem and continuous post-mortem examination of animals slaughtered at packing plants that market their meat products outside the province in which they operate, ensures maintenance of sanitary standards during processing of the products, accurate labelling and proper kind and use of ingredients and preservatives; it ensures also that, in these plants, the animals are slaughtered in a humane manner.

Economics Branch.—This Branch collects, analyses and interprets economic information needed to formulate and administer departmental programs and policies and does intelligence and research work designed to increase efficiency in agricultural production and marketing and to guide farmers in making needed adjustments in farm organization and operation. It acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, and assists in any economic undertakings with which the Department is concerned. The Branch is also closely associated with the work of the Food and Agriculture Organization of the United Nations, the UN/FAO World Food Programme, the General Agreement on Tariffs and Trade, and the Directorate of Agriculture of the Organization for Economic Co-operation and Development.

Production and Marketing Branch.—The Production and Marketing Branch conducts many of the promotional and regulatory functions of the Department. Six specialized divisions administer legislation and policies in the production and marketing of livestock, poultry, fruits and vegetables, dairy products and plant products, and policies in connection with the control of disease in plants.

The *Livestock Division* administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics. The *Poultry Division* carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products. The *Fruit and Vegetable Division* administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of inter-provincial and international dealers and brokers who deal in fresh fruits and vegetables. The *Dairy Products Division* administers the Cheese Factory Improvement Act and legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The *Plant Products Division* administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pest-control products, conducts field inspections and maintains regional testing laboratories. The *Plant Protection Division* is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

Administration Branch and Information Division.—The general business management of the Department is undertaken by the Administration Branch, the duties of which also embrace emergency measures planning and the Departmental Library; the main emphasis of the Library's collection is, of course, on agriculture but extends also to the life sciences.

The Information Division gathers and publishes information arising from research work and the development of regulatory programs of the Department. Publication is through the printed word, press and radio releases, motion pictures, television and exhibits.

Subsection 2.—Farm Assistance Programs

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act (see p. 456) to deal with the results of the drought in the 1930s; the Prairie Farm Assistance Act (p. 474) to mitigate the effects of crop failure; Feed Grain Assistance Regulations (p. 475) to assist in the movement of western feed grains to Eastern Canada and British Columbia; and the Maritime Marshland Rehabilitation Act (p. 452) to save valuable soil in the Maritime Provinces.

Although much has been accomplished and is still being accomplished by these measures, changes in the past two decades have dictated a different approach to some problems. Large-scale mechanization was the sequel to the reduction of manpower available to farmers; the number of farms declined but the size of farms increased; marketing and income problems took different forms. Legislation enacted to meet these situations include price support (Agricultural Stabilization Act), production and markets stabilization (Canadian Dairy Commission Act), crop insurance (Crop Insurance Act), resource development (Agricultural and Rural Development Act and Fund for Rural Development Act), feed grain assistance (Livestock Feed Assistance Act) and credit facilities (Farm Improvement Loans Act, Prairie Grain Advance Payments Act, Farm Credit Act and Farm Machinery Syndicates Credit Act). These measures, with the exception of the Agricultural and Rural Development Act and the Fund for Rural Development Act (see pp. 459-460), are described individually below.

Agricultural Stabilization Act.—The Agricultural Stabilization Act (SC 1958, c. 22, proclaimed Mar. 3, 1958) established the Agricultural Stabilization Board and repealed the Agricultural Prices Support Act, 1944. The Board is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support, at not less than 80 p.c. of the previous ten-year average market or base price, the prices of nine commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the prairie areas as defined in the Canadian Wheat Board Act). Other commodities may be supported at such percentage of the base price as may be approved by the Governor in Council. Since the Act came into force, the following farm products, other than the nine named commodities, have been supported at one time or another: honey, potatoes, soybeans, sunflower seeds, sugar beets, tobacco, turkeys, apples, peaches, sour cherries, apricots, raspberries, asparagus, tomatoes, milk for manufacturing and skim milk powder. The Board may stabilize the price of any product by an offer-to-purchase, by a deficiency payment, or by making such payment for the benefit of producers as may be authorized.

In stabilizing prices of certain commodities by means of deficiency payments, the price stabilization program has been assisting the agricultural industry to make production adjustments from a position of excessive supply to one of more normal relationship between supply and demand. The institution of limited deficiency payments by the Board assists

in the adjustment of production in a relatively short time. During the period of adjustment, the Board guarantees a minimum average return to producers for a limited quantity of product.

The cost of stabilization programs under the Act averages \$58,500,000 a year. The Board has available a revolving fund of \$250,000,000. Losses incurred are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. An Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations assists the Board in its operations.

Canadian Dairy Commission Act.—The Canadian Dairy Commission was established by the Canadian Dairy Commission Act, 1966, and became operative on Apr. 1, 1967. The affairs of the Commission are directed by three Commissioners, and its objects are "to provide efficient producers of milk and cream with the opportunity of obtaining a fair return for their labour and investment and to provide consumers of dairy products with a continuous and adequate supply of dairy products of high quality".

To perform its functions, the Commission is authorized to stabilize prices of major dairy products through offers to purchase at fixed prices, thus establishing stable prices in the interests of both producers and consumers. The Commission may borrow from the Minister of Finance the funds required for such purchases to a maximum of \$100,000,000, which must be repaid.

The Commission administers the payment of funds provided to it by the Government for subsidies to producers of milk and cream used in the production of dairy products. These payments supplement returns to producers from the market and permit market prices to be kept at reasonable levels. The total quantity of milk and cream on which subsidy is paid is restricted to the volume required to serve the Canadian domestic market. Each producer is given a quota for the amount for which he is eligible for subsidy. The Commission, indirectly, pools returns to producers from products sold on the domestic and export markets through an export equalization fund. Money for this is deducted from the subsidy and payments are made to equalize export prices with domestic prices for any surplus products that must be exported.

The Commission also has authority, under regulation by the Governor in Council, to exercise control of the interprovincial and export movement of dairy products, and to perform other functions related to its responsibilities.

Crop Insurance Act.—To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage.

Under the Act and amendments of 1964 and 1966, the Federal Government will pay 50 p.c. of the administrative costs incurred by a province and 25 p.c. of the amount of premiums required to make the scheme actuarially sound. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which indemnities required to be paid under policies of insurance exceed the aggregate of the premium receipts for that year, the reserve for the payment of indemnities, and \$200,000. As an alternative to such loans, the Federal Government may re-insure a major portion of the provincial risk in a program operated under the Crop Insurance Act. Farmers

insured under the Act are not eligible for payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

In 1968, 64,860 farmers purchased \$188,167,000 worth of insurance coverage for their crops, compared with 33,411 farmers and \$91,297,677 worth of coverage in 1967. Premiums collected totalled \$12,600,000 (including the federal share) and indemnities paid out approached \$15,000,000. Several factors contributed to the substantial increase in 1968: (a) coverage was available to farmers in Quebec for the first time and other provinces extended their coverage to new areas; (b) insurance was available on more crops; (c) more farmers are purchasing insurance and many farmers are purchasing higher coverage as the scheme becomes better known and the benefits from crop insurance become more apparent. Insurance coverage will be available in all provinces except Newfoundland and New Brunswick in 1969.

Farm Improvement Loans Act.—The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electrical system, the erection or construction of fencing or works for drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling and to purchase additional land for the purpose of farming. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period July 1, 1968 to June 30, 1971. The maximum repayment period for land purchase is 15 years and for all other purposes 10 years. The interest rate is prescribed in the regulations and is adjustable semi-annually on Apr. 1 and Oct. 1 of each year to reflect changes in the levels of interest rates generally. The borrower is required to provide from 10 p.c. to 33½ p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at \$900,000,000 which may be lent by the chartered banks and a limit of \$300,000,000 which may be lent by other designated lenders. By Dec. 31, 1967, 3,432 claims amounting to \$2,682,007 had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one tenth of 1 p.c. after recoveries have been taken into account. The maximum loan or amount that may be outstanding to a borrower at any one time stands at \$25,000.

Prairie Grain Advance Payments Act.—This Act, which came into force on Nov. 25, 1957, and was subsequently amended in August 1958 and November 1968, provides for interest-free advance payments to producers in Western Canada for farm-stored threshed grain (wheat, oats and barley). Advance payments of \$1 per bushel of wheat, 40 cents per bushel of oats and 70 cents per bushel of barley are made subject to certain restrictions as to quota and acreage. The total of advances obtained in any crop year may not exceed \$6,000. Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan until the producer has discharged his advance.

Farm Credit Act.—The Farm Credit Act (SC 1959, c. 43, proclaimed on Oct. 5, 1959) established the Farm Credit Corporation as successor to the Canadian Farm Loan Board established in 1929. The Corporation, which is a Crown agency, reports to Parliament through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans for farmers. Under Part II the Corporation may lend up to 75 p.c. of the appraised value of the farm land and buildings taken as security, not exceeding \$40,000 for one, \$80,000 for two or \$100,000 for three or more owner-operators principally occupied in a single farming business. Under Part III loans may be made up to 75 p.c. of the appraised value of the land and chattels, not exceeding \$55,000 for one or \$100,000 for two or more qualified owner-operators in a single farm business. Special provision is made under this Part for loans up to 90 p.c. of farm assets where the owner-operator is under 35 and the management of the farm will be considerably above average. Part III loans are further secured by insurance on the life of the borrower, and his farming operations are subject to supervision by the Corporation. Similar life insurance and supervision are available to Part II borrowers on an optional basis.

Under both Parts, applicants must be at least 21 years of age and principally occupied in farming. Individual borrowers under Part III must be between 21 and 45. To qualify for more than \$55,000 under Part III, there must be at least two owner-operators under 45, or one under 35. All loans are repayable on an amortized basis within a period not exceeding 30 years. The interest rate is set by Order in Council and varies with the cost of money to the Corporation.

The Corporation has 127 field offices administered by 234 credit advisers who are responsible for informing local farmers about the services available, for pre-loan counselling on credit use, farm planning and farm management, for accepting applications and for making farm appraisals.

In addition to the amounts repaid by borrowers, funds for lending to farmers may be borrowed by the Corporation from the Minister of Finance. The aggregate amount of such borrowings outstanding at any time may not exceed 25 times the capital of the Corporation. This capital was raised by amendment to the Act in 1968 from \$40,000,000 to \$56,000,000. There were 63,482 loans to the amount of \$944,418,009 outstanding as of Mar. 31, 1968.

Farm Syndicates Credit Act.—The Farm Syndicates Credit Act (SC 1964, c.29, as amended by SC 1968-69, c.32) authorizes the Farm Credit Corporation to lend to qualified groups of farmers (referred to as syndicates). A syndicate is a group of three or more farmers, the majority of whom have farming as their principal occupation, who have signed an agreement acceptable to the Corporation with respect to the joint purchase and use of machinery, equipment or buildings which can be used profitably by them in their farming operations. Co-operative farm associations and certain farming corporations may qualify as syndicates for loans without the members entering into a formal agreement.

A syndicate may borrow up to 80 p.c. of the cost of machinery, buildings (including site and other improvements) and installed equipment suitable for joint use, to a maximum of \$15,000 per member or \$100,000, whichever is the lesser. Loans are repayable over a period not exceeding 15 years for buildings and installed equipment, and seven years for mobile machinery. The interest rate is based on the cost of funds to the Corporation, advanced by the Minister of Finance, and its expenses in servicing loans. There is an initial charge of 1 p.c. on the amount of each loan. Security is provided by a promissory note signed by each syndicate member, and such other security as may be required. Up to Mar. 31, 1969, the Corporation had approved 577 loans totalling \$4,600,000.

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities cannot do alone and to enable the farmers to put in a crop the following year. Payments for the 1967-68 crop year, as at July 31, 1968, totalled \$8,885,965; payments made under the Act since 1939 amounted to \$369,966,665.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in the 1967-68 crop year, as at July 31, 1968, was \$10,106,186; the amount collected since 1939 was \$196,009,171.

Farmers operating land in the spring wheat area, and not covered by a federal-provincial crop insurance scheme, are eligible for awards. Crop failure and natural causes preventing seeding and summerfallowing are taken into account in making awards. These may not exceed \$800 in respect of any one farmer's total cultivated acreage.

Livestock Feed Assistance Act.—The Livestock Feed Assistance Act (SC 1966, c. 52) established the Canadian Livestock Feed Board, which is a Crown agency reporting to Parliament through the Minister of Agriculture. The Board has four main objects which are to ensure: (1) the availability of feed grain to meet the needs of livestock feeders; (2) the availability of adequate storage space in Eastern Canada for feed grain to meet the needs of livestock feeders; (3) reasonable stability in the price of feed grain in Eastern Canada and in British Columbia; and (4) fair equalization of feed grain prices in Eastern Canada and in British Columbia.

In furtherance of these objectives, the Board may make payments related to the cost of feed grain storage and transportation. Feed grain transportation assistance payments have been made since 1941, and since April of 1967 have been made under the authority of the Livestock Feed Assistance Act. Under the Feed Grain Assistance Regulations of the Appropriations Act, the original policy was initiated in October 1941 to provide a market for western feed grains, and to enable livestock feeders in Eastern Canada and British Columbia to obtain supplies of feed grains at a cost that would maintain livestock and poultry production at a high level. This program was modified over the years to encourage better use of transport and storage facilities. The program, which was limited initially to rail and water transport, was extended to highway carriage in 1964 in Eastern Canada.

During the past two years, under the Canadian Livestock Feed Board, the policy has been extended to include payment of transportation assistance on corn grown in Ontario and shipped to the Atlantic Provinces and wheat grown in Ontario and shipped to Quebec and the Atlantic Provinces. Trucks were first authorized to transport feed grains under the policy in British Columbia in July 1968.

During the year ended Mar. 31, 1968, \$21,336,529 was spent on transportation assistance and \$88,909 on storage assistance on feed grains in store in vessels at Eastern Elevators during the winter months. These vessels were approved by the Board as being necessary to supplement storage space at Eastern Terminal Elevators.

6.—Freight-Assisted Shipments of Feed Grains, by Province of Destination, Year Ended Mar. 31, 1968

¹ Includes 1,289 tons of sample feed grain in British Columbia, origin shipped into British Columbia.

² Includes 1,812 tons of corn of Manitoba

Section 3.—Provincial Governments in Relation to Agriculture

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines, Agriculture and Resources. The Division consists of a director and a staff of 64 officers. For purposes of administration, the province is divided into nine districts in each of which is located a fieldman with permanent headquarters. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of \$125 an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them.

Every encouragement is given to the production of livestock. Favourable marketing conditions and departmental assistance and loans under the Provincial Farm Development Loan Act have contributed to increased output of poultry products and pork. The Provincial Veterinarian and his staff supervise the health of animals program and the federal-provincial project for the eradication of bovine tuberculosis.

Prince Edward Island.—The activities of the provincial Department of Agriculture are indicated by its staff establishment which includes, in addition to the Minister and Deputy Minister, a dairy superintendent, three check testers, three dairy herd improvement promoters, a director of veterinary services and 10 subsidized practising veterinarians, a livestock director, a director of marketing and research and two research fieldmen, a director of extension, a horticulturist, a soil analysis assistant, a poultry fieldman, an economist, an agronomist, a director of 4-H Clubs and an assistant, three agricultural representatives, a nursery supervisor, a forester and an assistant forester, a farm improvement supervisor and a director of Women's Institutes.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer and marketing organizations.

New Brunswick.—Provincial government agricultural policy and programs in New Brunswick are administered and directed by the Department of Agriculture and Rural Development. Under the Minister of Agriculture and Rural Development, the Department is administered by a deputy minister, an assistant deputy minister and the directors of Branches concerned with: extension, livestock and dairying, veterinary services, poultry, plant industry, agricultural engineering, home economics, credit unions and co-operatives, agricultural education and rural development.

Quebec.—Quebec agricultural policy is based on the principle that the commercial family farm is the ideal foundation for the rural social structure. It is therefore aimed at organized modernization of this type of operation. The provincial government, in conjunction with agricultural, co-operative and professional associations, seeks to increase agricultural productivity in the province by promoting the professionalization of farming, by updating production methods, by developing marketing procedures for farm products, and through rural development. Responsibility therefore is vested in the Department of Agriculture and Colonization operating under the authority of a minister and three deputy ministers.

The Production and Development Branch, under an assistant deputy minister, operates at the management level. Its activities are focused mainly on research, technical education, popularization of knowledge, land development, and animal and plant improvement and receive support from the Farm Credit Bureau which provides land and farm improvement loans. As a result of large-scale decentralization of provincial administration to 12 agricultural areas, farmers are receiving fast and diversified service.

Government, recognizing the importance of farm product marketing, has set up a Marketing Branch headed by a director general. This Branch is responsible for establishing quality standards for farm products and their control, wholesomeness of foodstuffs,

farm product classification, fair sales practices, and for the promotion of modern processing and marketing techniques. In this field, the Department is assisted by the Agricultural Marketing Board.

These two Branches, whose function is to serve farm operators, receive guidance and support from a number of scientific and administrative services including an economics and planning service, a veterinary training service, a scientific information and publicity service, and a farm hydraulics service. Additional to this group of professional bodies is an integrated administrative service in charge of personnel, accounting, the payment of grants, property management, etc.

ARDA Quebec, which operates in a number of departments, is administered by an assistant deputy minister of the Department of Agriculture and Colonization. The government has enacted crop insurance legislation, administered by an *ad hoc* agency, to protect farmers against weather hazards. In addition, a sugar refinery and a blueberry freezing plant are operated under departmental management.

Ontario.—The Ontario Department of Agriculture and Food conducts a wide variety of programs to develop a sound agricultural industry and to help farmers. Most assistance is through self-help programs which benefit the individual farmer directly. The Department administers 44 separate Acts of the Legislature, some of which are regulatory on an industry-wide basis.

Through the Agricultural Rehabilitation and Development Branch (ARDA) the province shares equally with the Federal Government the cost of rural development. In Ontario ARDA is heavily committed to farm enlargement and consolidation, accompanied by retraining programs, and research. Other ARDA projects in Ontario include community pastures where farmers rent pasture at cost, and soil, water and wildlife conservation projects.

Research and education are administered by the Education and Research Division of the Department. Under the Division, the Agricultural Research Institute of Ontario recommends and co-ordinates research for the betterment of agriculture, veterinary medicine and household science, undertakes continuous research on crops, livestock and farming practices, and administers a number of services. Horticultural research is co-ordinated by the Horticultural Research Institute of Ontario, which also operates under the Education and Research Division. Fruit and vegetable product development research, and fruit and vegetable variety research are the chief functions of the Institute.

The Crop Insurance Commission of Ontario, a Branch of the Department, provides insurance against weather, insect and disease perils on winter wheat, spring grain (oats, barley and mixed grain under combined coverage), forage crops (hay, corn silage and, indirectly, improved pasture), grain corn, soybeans and white beans, and the program continues to expand into other areas of production. Premium rates are subsidized 25 p.c. by the Federal Government and 5 p.c. by the Ontario Government.

The Ontario Food Council Branch of the Department has the broad responsibility of finding methods to better co-ordinate marketing of Ontario farm products. The Council includes representatives of producers, processors, wholesalers, distributors and consumers. Market development, import replacement and expanding food information services are major areas of the Council's work.

The programs of the Veterinary Services Branch fall into the categories of service and regulation. Services include administration of a mastitis control program, a certified herd policy for swine and veterinary assistance for designated areas (mostly in the northern districts); the Regulatory Division administers the Meat Inspection Act, the Brucellosis Act 1965, the Animal Contagious Diseases Act, the Livestock Community Sales Act, the Dead Animal Disposal Act and the Rabies Indemnification program. The Branch provides diagnostic services for livestock and poultry producers at five regional laboratories.

The Milk Commission of Ontario and the Dairy Branch are responsible for dairy programs. Under the Milk Act, 1965 and through the Ontario Milk Marketing Board and the Ontario Cream Producers' Marketing Board, the Commission is responsible for all producer marketing of milk and cream in the province. The Ontario Milk Marketing Board directs milk from farm to plant and establishes prices. The Branch administers the Farm Products Payments Act, 1967, the Oleomargarine Act, and the Edible Oil Products Act. The Branch licenses processors and distributors, carries on extension work with producers, operates milk-testing laboratories for the purpose of calculating producer returns, certifies butter and cheese makers, graders and testers, and does inspection work on farm and in plant.

Under the Farm Products Marketing Board, a Branch of the Department of Agriculture and Food, 22 producer boards market 40 commodities with a total market value of between \$450,000,000 and \$500,000,000 annually.

The Ontario Junior Farmer Establishment Loan Corporation makes first-mortgage loans to junior farmers between 21 and 35 years of age. A junior farmer may apply for a loan of up to 80 p.c. of the appraised value of the farm and buildings, to a total of \$40,000. In addition, guaranteed loans to junior farmers from chartered banks of up to \$10,000 for operating capital are available. Life insurance and farm management programs are available to all borrowers but are mandatory for those borrowing over \$20,000.

The Co-operative Loans Board makes loans to co-operatives for the construction of cold storages, feed mills, processing plants, grain elevators, potato storages, dairies, creameries and cheese factories.

There are 54 county and district Extension Branch offices to serve Ontario farmers. The agricultural representative carries the findings of all research organizations directly to farmers; all representatives have had training in farm management principles. In addition, specialists on farm management and engineering are located strategically throughout the province. The Branch endorses and assists the 4-H Clubs and the Junior Farmers' Association of Ontario and also administers the northern Ontario assistance policies which vary from district to district and from year to year.

The Home Economics Branch conducts an extension program for rural women's groups and for girls' 4-H homemaking clubs. The senior program deals with the study of foods, nutrition, clothing, textiles, home furnishings, home crafts and home management.

The Soils and Crops Branch conducts programs of applied research to provide farmers with specific recommendations for their areas. Much of the work of the soils and crops specialists is carried on through demonstrations and at meetings of local branches of the Ontario Soil and Crop Improvement Association. The specialists supervise county weed inspectors.

The Live Stock Branch supervises numerous livestock improvement programs and administers the Warble Fly Control Act, the Artificial Insemination Act, the Dog Tax and Live Stock and Poultry Protection Act, and the Hunter Damage Compensation Act. Livestock improvement programs include dairy herd improvement; beef cattle performance testing; quality meat sire policy; bull, boar and ram premium policies; production testing in sheep and the federal-provincial sheep transportation assistance policy, and northern Ontario live stock assistance. The Branch sponsors and endorses the Ontario Beef Cattle Improvement Association and the county and district associations, makes grants available to regional livestock clubs that hold sales of good quality breeding stock, and sponsors exhibits of livestock outside the province.

The Information Branch publishes and distributes several hundred publications covering most areas of agriculture in Ontario, as well as home gardening and homemaking. News releases, radio tapes and television are used to convey information on important changes in agriculture to farmers. Its film library distributes more than 2,000 films annually to the public.

The Agricultural and Horticultural Societies Branch advises and offers financial assistance to agricultural and horticultural societies and ploughmen's associations throughout the province and administers the Community Centres Act which authorizes grants to municipalities for capital investments in community centres and recreational facilities.

Manitoba.—The Department of Agriculture serves Manitoba through the following branches.

The Extension Service Branch deals with rural extension education generally and has specialists devoting attention particularly to agricultural engineering, entomology and beekeeping, radio, TV and information, 4-H Clubs and women's work, manpower and rural development. Meetings, field days, and short courses are held; 37 agricultural representatives and six assistants are located in 35 offices in the province, each serving from one to five municipalities, four manpower extension agents serve the Interlake region, and 14 home economists serve designated areas.

The Animal Industry Branch develops and administers policies that encourage the improvement and efficient production of different classes of livestock, including poultry, supervises the grading of cream and inspects dairy manufacturing plants. Several Acts to promote high quality products for consumer protection are administered in co-operation with federal departments.

The Soils and Crops Branch encourages the development, production and improvement of cereal, forage and special crops and horticulture and promotes proper land use through soil conservation programs. The Branch develops and administers policies that encourage good field crop husbandry, soil conservation land development and weed control.

The Economics and Publications Branch deals with agricultural economics, supervises the farm business clubs and publishes and distributes annually approximately 250,000 bulletins, circulars, posters, leaflets, etc. The Branch is responsible for publishing provincial agricultural statistics and maintains an agriculture reference library.

The Co-operative Services Branch registers and supervises co-operatives and credit unions and administers the Acts governing them. It also collects and compiles statistics on co-operative activity throughout the province. Producer marketing boards and Marketing Commissions under the Natural Products Marketing Act are also served and administered through this Branch.

The Veterinary Services Branch provides a diagnostic laboratory for animal diseases; administers the brucellosis control program, the Veterinary Services District Act and the Veterinary Science Scholarship Fund Act; and works in close co-operation with practising veterinarians and the federal Health of Animals Branch in the control of livestock and poultry diseases.

Saskatchewan.—The Saskatchewan Department of Agriculture is composed of the following branches and services.

The Agricultural Representative Branch staff serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information and to develop district improvement programs. The Department pays half of the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Departments of Manpower and Immigration and of Labour. Farm information is dispensed over private radio stations, over TV stations and to the press by the Information Division and by the agricultural representatives.

The Production and Marketing Branch is comprised of three major divisions—Animal Industry, Plant Industry and Veterinary. The first two divisions provide

specialist services to agriculture and agricultural representatives in field crops, weed and insect control, soil conservation, horticulture, agriculture, livestock and poultry, and administer related Acts and programs. The Veterinary Division administers the Veterinary Service District Act and Calfhood Vaccination Program, provides laboratory services and co-operates with the Federal Government and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and water utilization and control projects. Land reclamation and development and the construction of provincial community pastures also come within its jurisdiction.

The Lands Branch administers Crown land, except forest reserves and parks in settled areas, classifies it according to the use for which it is best suited and disposes of it under lease or sale. The Branch also secures land control for land utilization projects, supervises new settlement projects, pays for clearing and breaking by farmers on provincial leases, and operates provincial community pastures.

Farmers are assisted by the Family Farm Improvement Branch which gives technical advice at the farm on the construction of farm buildings, and on farmstead planning mechanization and materials handling. The Branch conducts research for farm water and sewage works and provides technical and financial assistance for their installation.

The Economics and Statistics Branch undertakes research and investigations required to formulate and evaluate policies and programs that will ensure a high level of growth and efficiency in Saskatchewan's agriculture; it collects, analyses and distributes economic information and principles to assist people interested in or engaged in agricultural pursuits. Data on crop conditions, production, marketings and income are available from the Statistics Division.

Alberta.—The Alberta Department of Agriculture has seven Divisions. The Plant Industry Division administers programs and policies relating to crop improvement; crop protection and pest control; soils and soil conservation; weed control; horticulture; apiculture and special projects. A crop diagnostic service is offered through a Crop Clinic at Edmonton and horticultural services at a horticultural station at Brooks; a tree nursery at Oliver provides trees for farm planting.

The Animal Industry Division administers legislation, policies and programs in the broad area of livestock, dairy and poultry production and in processing and marketing, including: setting standards for and approving public sales of sires; sire purchase assistance; ROP programs for beef cattle, swine and sheep; extension programs for all classes of stock; administering standards and qualifications for the artificial insemination (AI) industry; supervising feeder associations; brand registration and inspection; licensing of butchers, livestock dealers, stockyards and AI technicians; pound districts and sale of horned cattle. The testing, grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation and temperature control for dairy and frozen-food plants. A regular cow-testing service to provide the basis for breeding, feeding and culling dairy cattle is available to dairy producers, and chemical and bacteriological analyses are conducted for industrial directives. Licences are issued to poultry hatcheries, wholesalers, first receivers and truckers and programs are conducted for control of pullorum-typhoid diseases of chicken- and turkey-hatching egg supply flocks; extension programs, cost studies, disease tests and surveys, and research projects with respect to poultry are also carried out.

The Veterinary Services Division provides diagnoses of livestock and poultry diseases and conducts investigations of disease conditions; provides lecture services for the University of Alberta and for other groups; promotes such policies aimed at reducing losses in brucellosis control, stockyard inspection, swine health programs, mastitis, etc.; and administers the licensing and exporting of live fur bearing animals and pelts and assists fur farmers in care, management and stock improvement.

The Extension Branches of the Agricultural Extension and Colleges Division operate 53 offices and employ 72 district agriculturists and 28 district home economists who supply information and guidance to farm families and promote progressive agricultural and home-making policies and programs. Their work is co-ordinated by seven regional agriculturists and is complemented by an expanding staff of regional specialists in livestock, plant industry, economics, engineering, and home economics. Five broadcasts are conducted each week over ten radio stations and weekly and daily press material is issued to radio, TV and the press; publications are supplied to the rural public and visual aids are provided for department staff members. Agricultural and vocational colleges are operated at Olds, Vermilion and Fairview, all three offering five courses in agriculture—a general course, or majors in plant science, animal science, agricultural mechanics and farm management. They also offer a complete business course and a short course in land appraisal and assessment. Special courses include horticulture, fashion and design, and irrigation technology at Olds; home economics and AI technician training at Vermilion; and motor mechanics and welding at Fairview.

The Agricultural Economics Division provides extension information on farm management, credit and marketing to aid farmers in instituting good business practices on the farm; collects, analyses and disseminates agricultural statistics in collaboration with the Dominion Bureau of Statistics; conducts studies on farm production costs and returns, marketing, and resource and rural development; and provides advisory assistance on economic matters to government departments, the agricultural industry and farm groups. Credit is made available to farmers for the purchase of land under the Farm Purchase Credit Act and for home improvements under the Farm Home Improvement Act.

The Water Resources Division administers legislative control over the province's water resources and all functions connected with the allocation, apportionment, and distribution of surface and ground water. Its basic responsibility is to foster an orderly development of available water supplies to meet all the foreseeable needs of the province. Thus, the Division is responsible for Alberta's large-scale water conservation and development program known as "The Prairie Rivers Improvement and Management Evaluation" (PRIME), embodying major water diversion and storage areas for the transfer of water from areas of surplus to areas of deficiency. Divisional programs include: (1) design and construction activities on water control projects in the various categories of irrigation, drainage, flood control, river and erosion control, water development and conservation when it is in the public interest to do so; (2) inventory, distribution and magnitude of surface and ground-water; (3) land development planning for irrigation purposes and the management and use of water as it relates to agricultural production; and (4) activities related to seepage and salted land reclamation, to promote, develop and improve irrigation practices, and the determination of the physical characteristics of soils relevant to the soil water phenomena.

The Program Development Division administers the ARDA and related rural development programs, including the former provincial ARDA program; the Conservation and Utilization Branch, including the land assembly program, the farm adjustment and consolidation program, the land improvement and conservation program, the renewable resources research program, the Utilization of Lands and Forests Act and the Canada Land Inventory. Other Branches of the Division include the Agricultural Products Marketing Council, which establishes and regulates marketing boards and commissions to assist in the marketing of agricultural products; the Municipal Agricultural Programs Branch, which assists in programs carried out by local authorities, administers the federal-provincial manpower agreements, and assists in the administration and achievement of objectives of agricultural societies; and the Irrigation Secretariat, which administers, for the Irrigation Council, the Alberta Irrigation Act in the areas of administration, operation, maintenance, and reconstruction of irrigation projects and districts in the province.

British Columbia.—The Department of Agriculture comprises three Divisions—General Administration, General Services, and Production and Special Services. General

Administration is responsible for the direction of policies affecting farmers' institutes, institutional farms, personnel and publications. The General Services Division includes the Agricultural Rehabilitation and Development Act (ARDA), Crop Insurance, Farm Economics, and Markets and Statistics Branches. The Production and Special Services Division includes all other Branches—Agricultural Development and Extension, Apiary, Dairy, Entomology and Pest Control, Field Crops and Soil Testing, Horticulture, Plant Pathology, Poultry, Soil Survey, and Veterinary and Livestock.

The Agricultural Development and Extension Branch offers general information services to farmers through 17 offices located in all major farming districts. In addition, the Branch provides agricultural engineering service and supervision of the 4-H Clubs and government land-clearing programs. The Horticulture Branch serves the fruit, vegetable and allied industries through nine branch offices. The Veterinary and Livestock Branch administers regulations pertinent to livestock production and marketing and provides veterinary services, brands inspection and associated dairy herd improvement services at 10 locations throughout the province.

Subsection 2.—Agricultural Schools, Colleges and Universities

All of the provinces of Central and Western Canada have agricultural colleges in association with universities that give courses leading to degrees in agricultural science and home economics and also provide postgraduate courses; the University of British Columbia has a faculty of Agricultural Sciences; Ontario, Quebec and Saskatchewan have veterinary colleges. In addition, all of these provinces have schools of agriculture or diploma courses that provide basic training for young people intending to return to farms or interested in employment in businesses allied with agriculture.

In the Maritime Provinces, training in scientific agriculture is available at colleges in Prince Edward Island and Nova Scotia where courses leading to third-year admission to degree courses elsewhere are given. Vocational and short courses are available in all three provinces. All colleges of agriculture engage in research and extension activities.

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Censuses of Canada, through partial-coverage mailed questionnaire surveys and from the administrative records of government operations.

The Bureau collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure, per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the Canada Department of Agriculture and various provincial departments, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, contribute statistical data to the Bureau and aid directly in DBS survey work. Many thousands of farmers throughout Canada send in reports voluntarily and dealers and processors also provide much valuable data. The figures contained in this Section do not include estimates for Newfoundland; agriculture plays a relatively minor part in Newfoundland's economy and commercial production of most agricultural products is quite small. In the following Subsections, details are given for 1967 with earlier comparisons; figures for the latest year are subject to revision and it should be noted that many of those given for earlier years have been revised since the publication of the 1968 Year Book.

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

Subsection 1.—Income from Farming Operations

Cash Receipts from Farming Operations.—Estimates of cash receipts from farming operations include data concerning cash receipts from the sale of farm products, Canadian Wheat Board participation payments on previous years' grain crops, net cash advances on farm-stored grains in Western Canada, deficiency payments made by the Agricultural Stabilization Board, and supplementary payments. Farm cash receipts from the sale of farm products include the returns from all sales of agricultural products except those associated with direct inter-farm transfers. The prices used to value all products sold are prices to farmers at the farm level; they include any subsidies, bonuses and premiums that can be attributed to specific products but do not include storage, transportation, processing and handling charges which are not actually received by farmers.

Total cash receipts in 1967 from farming operations, excluding supplementary payments, were estimated at \$4,379,000,000 for Canada (excluding Newfoundland), the highest ever recorded. They were 3.3 p.c. above the previous record of \$4,238,700,000 established in 1966 and 22.8 p.c. above the average for the five years 1962-66.

The most significant contributions to the gain in farm cash receipts in 1967 were higher Canadian Wheat Board participation payments, increased cash returns from the sale of dairy products, tobacco, barley, cattle and calves, and larger payments under the dairy support program. In contrast, lower cash returns were realized from wheat, oats, rye, flaxseed, potatoes, hogs and poultry products. Increases in total cash receipts, ranging from about 3 p.c. to 6 p.c., were estimated for Quebec, Ontario, Saskatchewan, Alberta and British Columbia. In the remaining provinces, declines ranged from less than 1 p.c. in Manitoba to nearly 10 p.c. in New Brunswick.

7.—Cash Receipts from Farming Operations (excluding Supplementary Payments)¹, by Province, 1964-67

Province	1964	1965	1966	1967
	\$'000	\$'000	\$'000	\$'000
Prince Edward Island.....	31,674	40,514	36,546	33,807
Nova Scotia.....	46,700	51,506	55,842	55,031
New Brunswick.....	47,485	60,393	53,760	48,827
Quebec.....	458,634	507,968	595,387	634,262
Ontario.....	1,019,693	1,101,135	1,230,904	1,279,037
Manitoba.....	297,554	340,958	375,721	374,708
Saskatchewan.....	836,539	881,371	945,697	970,607
Alberta.....	587,823	654,187	756,950	786,940
British Columbia.....	153,629	164,200	187,881	195,819
Totals.....	3,489,731	3,802,232	4,238,688	4,379,038

¹ See text below.

In addition to the above income, farmers also received supplementary payments amounting to \$6,100,000 in 1967 as against \$41,300,000 in 1966. These payments include only those made under the Prairie Farm Assistance Act* and other government assistance to farmers who suffered losses as a result of adverse weather conditions. In 1966 these payments included substantial outlays for assistance to farmers in Quebec and Ontario who suffered from extreme drought conditions during 1965; with improved conditions in subsequent years, payments declined. When added together, farm cash receipts from farming operations and supplementary payments totalled \$4,385,200,000 in 1967, 2.5 p.c. above the previous record high of \$4,280,000,000 in 1966.

Field Crops.—During 1967, farmers' total returns from the sale of field crops, cash advances on farm-stored grains in Western Canada, and Canadian Wheat Board payments

* Payments to farmers under the provisions of the Prairie Farm Assistance Act are made from the Prairie Farm Emergency Fund to which farmers contribute by means of a 1-p.c. levy on grain marketings (see also p. 474).

amounted to \$1,837,800,000, nearly 4 p.c. above the 1966 level of \$1,769,400,000. Field crop returns for 1967 accounted for 42.0 p.c. of farmers' total cash receipts from farming operations, about the same proportion as a year earlier. The maintenance of field crop returns at this level was due to higher Canadian Wheat Board participation payments on previous years' grain crops and increased returns from the sale of tobacco, barley, fruits, vegetables, rapeseed, soybeans and sugar beets; lower receipts were obtained for wheat, oats, potatoes, flaxseed and rye.

Marketings of wheat were above those for 1966 during the first half of 1967 but dropped below during the second half, with the result that by the end of the year they were about 12 p.c. lower. Although initial prices were increased by 20 cents a bushel at Aug. 1, 1967, this was insufficient to offset the smaller marketings so that cash returns from this crop at time of delivery were down to \$761,600,000 from \$803,700,000 in 1966. Canadian Wheat Board participation payments paid in 1967 on the 1965 wheat crop pool amounted to \$270,200,000, as against the \$200,200,000 in 1966 on the 1964 pool. When these payments are added to the receipts at time of delivery, total returns from wheat amounted to \$1,031,800,000 in 1967, slightly above the \$1,003,800,000 realized in 1966.

Smaller marketings of oats more than offset an increase of five cents a bushel, in the initial price effective Aug. 1, 1967, and total cash returns at time of delivery declined from \$36,600,000 in 1966 to \$24,700,000 in 1967. Oats participation payments amounted to \$12,300,000 in 1967 and \$6,800,000 in 1966, to give total cash returns from this product of \$37,000,000 in 1967 and \$43,400,000 in 1966. Barley was the only cereal crop for which there was an increase in cash returns from marketings in 1967; marketings were higher as well as prices which averaged above the 1966 level as a result of an increase of 10 cents a bushel in the initial delivery price at Aug. 1, 1967. Total returns to barley producers, including initial returns and participation payments, amounted to \$125,000,000 in 1967, about 18 p.c. above the 1966 estimate of \$105,800,000. Receipts from the sale of tobacco were estimated at \$156,700,000, a 32.9-p.c. increase over the 1966 level of \$117,900,000 as a result of increases in both average prices and total deliveries.

The price of rye averaged about the same in 1967 as in 1966 and that of flaxseed increased but total returns from these crops dropped off sharply as a result of substantial reductions in marketings. There was little change in marketings of potatoes but prices were considerably lower, with the result that total income declined from \$73,700,000 in 1966 to \$53,300,000; the reduction was most evident in Prince Edward Island and New Brunswick.

Livestock and Livestock Products.—Total cash receipts from the sale of livestock and livestock products amounted to \$2,392,700,000 in 1967 compared with \$2,354,700,000 in 1966. Higher returns from the sale of dairy products, cattle and calves more than offset lower returns from hogs, poultry products, sheep and lambs.

Although marketings of cattle and calves were lower in 1967 than in the previous year prices averaged higher and total cash returns from this source amounted to \$922,300,000 as against \$888,300,000 in 1966. Hog marketings were well above the level of 1966 but prices averaged lower and total cash receipts declined from \$421,000,000 to \$408,300,000.

Cash returns to poultry producers were lower for both eggs and poultry meat in 1967. Although production of eggs was well above the level of the previous year, lower price resulted in cash receipts dropping from \$169,800,000 to \$148,600,000. Poultry meat production continued to climb largely as a result of higher output of chicken broilers but price were down more than enough to offset this increased output and total cash returns decline from \$232,600,000 in 1966 to \$224,700,000. Cash receipts from the sale of dairy product (exclusive of supplementary support payments) moved up about \$45,000,000 to \$629,400,000 in 1967; higher average prices more than offset a slight decline in production. Supplementary dairy support payments increased from \$68,500,000 to \$103,200,000 and, when added to sales returns, gave a total of \$732,700,000 for 1967 as against \$653,000,000 in 1966.

Farm Net Income.—Two different estimates of farm net income from farming operations are prepared by DBS. *Realized net income* is obtained by adding together farm cash receipts from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges; this estimate represents the amount of income from farming that operators have left for family living, personal taxes and investment after provision has been made for operating expenses and depreciation charges. *Total net income* is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and end of the year; this estimate is used in calculating the contribution of agriculture to national income and for making comparisons with net income of non-farm business enterprises.

For 1967, the estimated *realized net income* of farm operators from farming operations amounted to \$1,664,000,000, 4.1 p.c. below the record high of \$1,735,300,000 established in 1966 but 16.6 p.c. above the average of \$1,426,500,000 for the five-year period 1962-66. During 1967, the increase resulting from record-high cash receipts from farming operations was more than offset by increased farm operating expenses and a decline in supplementary payments.

For 1967, the estimate of *total net income*, which takes into account changes in farm inventories of field crops and livestock, amounted to \$1,529,100,000, 21.2 p.c. below the 1966 record level of \$1,940,700,000 and 1.5 p.c. below the average of \$1,553,100,000 for the period 1962-66. Although cash receipts were at an all-time high level in 1967, inventories of field crops declined substantially from 1966. Supplementary payments were also lower, particularly in Quebec and Ontario, and operating expenses continued to rise.

During 1967, total operating expenses and depreciation charges reached a new high of \$3,222,200,000 as against \$3,006,800,000 for 1966. With few exceptions, farmers' outlays for each of the items considered in farm operating expenses were higher, the most significant exception being the sharp drop in rental payments from \$158,500,000 to \$136,400,000. All of the entire decline occurred in Saskatchewan and Alberta as a result of smaller grain crops and the consequent reduction in share-rental payments. The greatest absolute increase in farmers' outlay for any single item was for livestock feeds, an expenditure that rose from \$505,700,000 to \$561,500,000 as a result of a continuing increase in quantities purchased and higher prices. Outlays for fertilizer and lime showed the greatest percentage increase in 1967; higher prices and a marked gain in quantities used pushed this expenditure up 17 p.c. above that of a year earlier. Most of this increase took place in the Prairie Provinces where fertilizer expenditures increased from \$62,000,000 to \$83,800,000. For the first time since estimates have been prepared, fertilizer costs in this area have exceeded those for Ontario. Costs of operating farm machinery continued to move up as prices for petroleum products advanced. Total interest payments on farm indebtedness increased still further during 1967 as farmers continued to expand their use of credit. No significant changes appeared to have taken place in the hired farm labour force in 1967 but wages reached new high levels.

9.—Net Income of Farm Operators from Farming Operations, by Item and by Province, 1964-67

(Exclusive of Newfoundland)

NOTE.—Includes estimated rental value of farm homes, supplementary payments made under the provisions of the Prairie Farm Assistance Act and payments under the Western Grain Producers' Acreage Payment Regulations.

Subsection 2.—Volume of Agricultural Production

The index of physical volume of agricultural production for Canada is estimated at 159.6 for 1967, 12.5 p.c. below the record level of 182.3 established in 1966. This is the fourth highest estimate of agricultural production on record, being exceeded by the level of 162.1 for each of 1963 and 1965 as well as by that of 1966. The drop between 1966 and 1967 can be attributed, for the most part, to smaller grain crops in Saskatchewan and Alberta; to a much lesser extent it reflects reduced output of potatoes and poultry. Production of cattle, vegetables and dairy products remained almost unchanged and production of hogs, eggs, calves and fruits increased.

On a provincial basis, the greatest percentage declines in production occurred in Saskatchewan and Alberta reflecting the substantial decline in grain production followed by New Brunswick and Prince Edward Island where there were smaller potato crops. Production changes of less than 1 p.c. occurred in Ontario and British Columbia. With few exceptions, changes in the production of individual items in Ontario tended to move within fairly narrow limits around the levels of 1966, although some increase occurred in the production of corn and eggs and some decline in potatoes and poultry. In British Columbia, lower production of grains, potatoes and cattle almost completely offset increased output of hogs, fruits, calves and poultry products.

For the remaining provinces, agriculture production in 1967 was higher than in 1966. The increases amounted to just over 1 p.c. in Nova Scotia and about 4 p.c. in Quebec and Manitoba. Nova Scotia reported lower egg output and higher production for cattle and fruits. In Quebec production was lower for potatoes and poultry but higher for livestock, eggs, fruits and vegetables. In Manitoba the increase reflects, mainly, larger crops of grain with less important increases for livestock and eggs; some decline occurred in output of potatoes and of poultry.

The index of physical volume of agricultural production has been developed as an index of unduplicated gross farm production, provision having been made to avoid double-counting of farm output. Within a province, such double-counting could occur when feed grains, credited to field crop production, are fed to livestock and appear later as livestock and livestock products. Interprovincially, this duplication could occur when feed grains produced in one province are fed in another, and when feeder cattle raised in one section of the country are shipped to another for finishing.

10.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1958-67

(1949=100. Exclusive of Newfoundland)

NOTE.—For a description of the index, methods and coverage, see DBS publication *Index of Farm Production 1966* (Catalogue No. 21-203).

Year	P.E.I.	N.S.	N.B.	Que.	Ont.	Man.	Sask.	Alta.	B.C.	Total

Subsection 3.—Field Crops*

The weather was quite variable for field crop production in Canada during 1967. In the Prairie Provinces cold, wet weather during the first half of May delayed seeding operations in nearly all regions and by mid-May seeding was only 8 p.c. completed, compared with the five-year average of 31 p.c. However, by the end of May seeding operations were nearing completion in most areas of the prairies due to the presence of good drying weather. Throughout most of June and July rainfall was light in many areas and by mid-July crops were deteriorating throughout almost all of Saskatchewan, the southwest corner of Manitoba, east-central and northeast Alberta and in the Peace River District. During August and September favourable weather rapidly matured grain crops and permitted completion of the harvest in record time. Despite the season having been one of the driest in many areas in at least 10 years, crop outturns were surprisingly large, of high quality and of good bushel weight.

In the Central Provinces of Ontario and Quebec, cool weather delayed somewhat the seeding of spring grains. In Ontario, despite this delay and wet weather during the growing season, the bulk of spring-sown grains and the winter wheat crop were harvested in good condition and average yields were obtained. Normal conditions for much of Quebec resulted in excellent growth and early harvesting; crop yields were near average levels and of satisfactory quality. In the Maritimes, after good growth in mid-season, wet harvesting weather reduced both yield and quality of most crops. In British Columbia, conditions were generally dry throughout both the growing and harvest periods and yields of cereals and forages in most areas, particularly in the Peace River Block, were below average.

The 1967 index of field crop production for Canada (1949=100) at 163.9 was well below the record 203.0 reached in 1966 and was little changed from the 1956 index at 162.9. Manitoba had an index level of 161.1 which exceeded the 1966 figure of 159.5 but fell short of the record 172.5 of 1965. The index for Saskatchewan at 171.7 was much below the record 274.2 achieved in 1966, mainly because of the reduced wheat crop. The Alberta index also declined from a record 252.1 in 1966 and the previous high of 214.5 in 1965 to 197.1 in 1967. The British Columbia index at 133.8 was below the 1966 record 155.9 but was above the 1965 index of 133.4.

The 1967 field crop production index in Eastern Canada showed increases for Ontario and Quebec and decreases for all three Maritime Provinces compared with 1966. In Ontario, larger grain crops and a record corn crop helped to raise the index to a new high of 165.9 from 156.8 in 1966. Quebec's index at 132.0 exceeded the 1966 level of 128.2 but remained below the record of 138.3 set in 1951. The 1967 indexes for Prince Edward Island, Nova Scotia and New Brunswick, with 1966 levels in brackets, were 97.2 (117.1), 58.4 (70.6) and 83.6 (102.8), respectively.

Canada's 1967 wheat crop was estimated at 592,920,000 bu., a decline of 28 p.c. from the record 1966 harvest of 827,338,000 bu. but 15 p.c. above the ten-year (1956-65) average of 514,991,000 bu. Average yield per acre decreased about 29 p.c. from 1966 and more than offset an increase of 1 p.c. in seeded acreage. The average protein content of the 1967 crop of hard red spring wheat was 13.8 p.c. compared with 13.2 p.c. obtained in 1966 and the average of 13.6 p.c. for all western spring wheat crops for the period 1927-66.

Supplies of Canadian feed grains (corn, oats, barley, rye, mixed grains and buckwheat) in the crop year 1967-68 were 8 p.c. below the previous year, as increases in opening stocks and imports from the United States did not quite offset the reduction in Canadian production. Compared with 1966-67, supplies of oats (Aug. 1, 1967 carryover of 109,791,000 bu. plus the 1967 production of 304,178,000 bu.) were down 18 p.c.; supplies of barley (carryover of 131,751,000 bu. plus a crop of 248,662,000 bu.) were 5 p.c. lower; and supplies of rye totalling 20,276,000 bu. were down 27 p.c. The 1967 crop of mixed grains, at 76,427,000 bu., was down from the 81,443,000 bu. in 1966 and production of grain corn at 74,083,000 bu.

* The supply and disposition of the major Canadian grains is dealt with in Chapter XXI, Pt. I, Sect. 2, under the heading of "The Grain Trade, 1966-67".

reached an all-time high. Net feed-grain supplies (total supplies less estimated exports, seed requirements and other domestic uses) amounted to 18,300,000 tons, 6 p.c. below the 1966-67 total of 19,500,000 tons but 11 p.c. above the 1956-65 average of 16,500,000 tons.

Acreages, yields and prices of the principal field crops in 1967 are shown in Table 11, compared with the two preceding years and 1960-64 averages.

Stocks of Canadian Grain.—Table 14 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1965-67, with averages for the five-year periods 1955-59 and 1960-64. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

14.—Carryover of Canadian Grain as at July 31, 1965-67, with Averages for 1955-59 and 1960-64

Subsection 4.—Livestock and Poultry

Livestock.—Marketings of all classes of livestock except cattle increased in 1967. An absence of profitable export outlets for both live and dressed products left more meat available for domestic use. Generally the situation was favourable, especially for cattle and calves which maintained strong prices for most of the year. Sharply increased marketings, however, lowered prices for hogs below the exceptionally high 1966 levels but in line with the previous five-year average.

Inspected slaughter of cattle in 1967 at 2,641,788 head was 2.3 p.c. lower than the 2,705,139 head in 1966; inspected calf slaughter at 738,815 was also down 3.5 p.c. The lower slaughter resulted in increased prices and the all-Canada average for cattle in 1967 was \$23.25 compared with \$21.80 in 1966. Exports of beef cattle were only 128,524, a 62-p.c. drop from 1966. At June 1, 1967, cattle and calves on farms numbered about 12,781,000, about 1 p.c. fewer than a year earlier. The numbers of milk cows and beef cows were down slightly but the largest decreases occurred in numbers of steers and dairy heifers.

There was an almost 20-p.c. increase in the number of hog carcasses graded in 1967 over 1966—8,186,356 compared with 6,860,030. Record high prices in 1966 induced the greatly increased 1967 production which, in turn, caused the average price paid for all hogs to decline by \$5.50 to \$28.55; the average for grade A hogs marketed at public stockyards was \$29.55 compared with \$35.05 in 1966. At June 1, 1967, the number of hogs on farms was estimated at 6,012,000, up 11 p.c. from 5,401,300 at the same date of 1966 and the highest since 1959. Sows and gilts for breeding were estimated at 690,800, up 7 p.c.

Inspected slaughter of sheep and lambs in 1967 was 325,468, down fractionally from 327,621 in 1966. Lamb prices showed less change from the previous year than other classes of livestock; the average for all sheep and lambs was \$21.90 per cwt., 65 cents below 1966. Sheep and lambs exported numbered 9,901 compared with 3,110 in 1966. At June 1, 1967, sheep and lambs on farms numbered 962,500, 4 p.c. fewer than at the same date of 1966; the breeding flocks of sheep (one year old and over) were estimated to number 498,200 and 509,100 in the same comparison.

The Canada Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1958 are given in Table 15. Local wholesale butcherings and slaughterings carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 15 are fairly inclusive.

Subsection 5.—Dairying

The total number of dairy cattle has been declining gradually for many years but increased output per cow has kept total milk production at a fairly static level during the past few years. Milk production is concentrated in Central Canada, the provinces of Ontario and Quebec accounting for about 73 p.c. of the total quantity. Of the total output in 1967, 63 p.c. was used for factory-made dairy products, 29 p.c. was sold in fluid form and 8 p.c. was used for all purposes on farms.

¹ Factory-made cheese includes cheddar and other cheese made from whole milk and cream.

² Amounts for "other cheese" are included in Quebec, Ontario and Alberta figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

In 1967 the output of butter continued the declining trend in evidence for a number of years. Creamery butter production has decreased nearly 9 p.c. since 1962 and farm-made butter has shown a much more significant change, dropping 57 p.c. in the same period. The 1967 output of creamery butter, which amounted to 330,000,000 lb., accounted for 7,714,000,000 lb. of milk or 42.2 p.c. of the national milk output and 68.0 p.c. of the milk used in dairy factory products. The production of farm butter accounted for only 74,000,000 lb. of milk or 0.4 p.c. of the national output. Per capita consumption of creamery butter was 16.43 lb. in 1967 compared with 17.35 lb. in 1966 and 18.17 lb. in 1965.

Cheese output, on the other hand, has moved gradually upward over the past 12 years, particularly in Ontario and Quebec; these two provinces accounted for 94.2 p.c. of the total output in 1967. The total Canadian production in that year amounted to about 191,000,000 lb., which represented approximately 2,098,000,000 lb. of milk or 11.5 p.c. of the total milk production. Exports of all cheese, mostly cheddar, amounted to 27,683,000 lb. in 1967 compared with 35,949,000 lb. in 1966.

Concentrated milk products, which comprise a large group of both whole milk and skim milk products, are moving in opposite utilization trends. The amount of milk going into whole milk products—evaporated milk, dry whole milk, partly skimmed concentrated products, etc.—is decreasing; milk used for these products amounted to 818,000,000 lb. in 1967, about 51,000,000 lb. fewer than in 1966 and 215,000,000 lb. fewer than in 1961. On the other hand, there is a steadily expanding market for solids non-fat, in the form of dry skim milk and casein; in 1967 the quantity of skim milk used in the production of these products amounted to 4,114,000,000 lb., an increase of 6.1 p.c. over the amount used in 1966. Casein production is concentrated in Quebec, about 96 p.c. of the national total originating in that province.

The importance of international trade in this sector of the industry is evident from the fact that of every 10 lb. of whole milk powder produced in Canada, six are exported; of every 10 lb. of casein produced, five are sold abroad; and of every 10 lb. of skim milk powder produced, three are exported. In normal years, export values of dairy products are three times as large as import values.

As indicated in Table 24, the estimated total consumption of fluid milk and cream, on a milk basis, has increased only slightly over the past three years and the per capita consumption has continued the slow decline in evidence over the past two decades. Total and per capita domestic disappearance of all dairy products are shown in Table 25.

¹ Includes Newfoundland for all manufactured dairy products.² Includes, in addition to the items listed, salted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26-p.c. fat, formula milks, evaporated milk of 2-p.c. fat, and concentrated liquid milk.³ Includes milk by-product items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim milk products, lactalbumin and concentrated liquid skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both.⁴ Includes ice cream in terms of milk.

Subsection 6.—Fruits, Vegetables and Other Farm Products

Fruits.—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. In Quebec the fruit growing districts are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are largely limited to Ontario and British Columbia.

By far the most valuable fruit crop produced in Canada is apples and in 1966 the farm value for this crop was \$31,700,000. The main outlet for Canadian apples is the fresh market which absorbs about 65 p.c. of the production each year. The volume of apples for processing has increased from year to year and now accounts for about 35 p.c. of production. In Nova Scotia nearly 70 p.c. of the crop is processed; lesser quantities are processed in other producing provinces.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island, but are produced over a somewhat wider area than are tree fruits. Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area. Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain areas in these provinces and a large percentage of the crop is frozen and exported. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported. Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops.

26.—Value of Commercial Fruit Produced, by Province, 1965-67, with Average for 1960-64

Vegetables.—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland and Saskatchewan. Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces and a somewhat smaller range in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers for processing and for sale on the fresh market but do not include averages or production of vegetables grown for home use on farms and elsewhere.

Tobacco.—Canada produces several types of leaf tobacco but by far the most important is the flue-cured or Bright Virginia type. This is grown mainly in Ontario, along with considerable quantities of burley and smaller amounts of dark (air-cured and fire-cured) tobacco. Quebec produces smaller quantities of these types as well as some cigar and pipe tobacco and small flue-cured acreages are also harvested in Prince Edward Island, Nova Scotia and New Brunswick. Although acreages planted were higher in 1967 than in 1966, yields per acre in all producing areas were smaller, resulting in a decrease in production from 234,182,000 lb. to 213,096,000 lb. The average value per pound also decreased from 70.04 cents to 68.03 cents.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past four decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita production for domestic consumption of cigarettes (calculated on the basis of total population) was 229; in 1966 it was 2,312 and in 1967 2,297.

¹ Includes other types not specified.

Eggs.—Egg production in 1967 at 442,176,000 doz. was 6.1 p.c. higher than the output of 1966 and 1.3 p.c. lower than the record production in 1959, which amounted to 448,200,000 doz. The number of layers increased slightly and the rate of lay per 100 layers increased to 20,293 from 19,742. The farm selling price of eggs averaged 35.3 cents per doz. compared with 42.8 cents in 1966 so that, despite the higher production, there was a decrease in total value of eggs produced. The three Maritime Provinces produced 6.8 p.c. of all eggs in 1967; Quebec, 17.9 p.c.; Ontario, 38.3 p.c.; the Prairies, 24.6 p.c.; and British Columbia 12.4 p.c.

Wool.—Table 33 gives the estimated production and apparent consumption of wool in Canada for the years 1963 to 1967. However, it should be noted that the estimates for 1967 are not strictly comparable with those of previous years because they exclude the output of pulled wool which is now produced by fewer than three firms and, according to the provisions of the Statistics Act, cannot be shown. In any case, it is evident that Canada produces only between 7 p.c. and 8 p.c. of its total wool requirements.

Honey.—As shown in Table 34, honey production in 1967 was 3 p.c. above that in 1966, accounted for by an increase in colony numbers. Average production per colony was 103 lb. compared with 104 lb. in 1966.

Honey is produced commercially in all provinces except Newfoundland and yields vary considerably from year to year. In 1967 Alberta was the largest producer, surpassing Ontario, the next largest producer, by 11,000,000 lb. Honey bees are kept in some fruit growing districts for pollination purposes and are also used for pollination of certain seed crops.

To facilitate storage, shipment and uniformity of quality, large quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. In 1967, Canada exported 4,325,259 lb. of honey valued at \$1,059,000, mainly to Britain, Japan, West Germany, the United States, Belgium and Luxembourg.

Sugar Beets and Beet Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

Maple Sugar and Maple Syrup.—Maple syrup is produced commercially in the provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported go to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped. Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Nursery Stock.—Statistics concerning the nursery industry in Canada for recent years are presented in Tables 38 and 39. All nurseries were asked to report quantities sold of stock propagated during these years; stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 264 nurseries reported shipments in 1967. Wholesale value of nursery stock shipments of fruit trees, etc., amounted to \$974,362 compared with \$736,222 in the previous year, and shipments of ornamental species to \$6,963,290 compared with \$5,350,711.

Greenhouse Operations.—Annual surveys are made of greenhouse operations. Resulting figures are based on data reported by firms and individuals returning questionnaires, with the exception of that for cucumbers and tomatoes grown in Essex County of Ontario (the most important producing area), which are based on information obtained from the local co-operative marketing agency. Only greenhouses used for the production of items for sale are included in the survey.

Subsection 7.—Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those prior to August 1967, the following points should be considered. Prices of all Western grains used in the construction of the index prior to that date are final prices; all later figures are initial prices only for wheat, oats and barley. Any subsequent participation payments will be added to the prices currently used and the index revised upward accordingly.

41.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1963-67, and Monthly Indexes for 1966 and 1967

(1935-39 = 100)

NOTE.—A description of this index, its coverage and the methods used will be found in DBS *Quarterly Bulletin of Agricultural Statistics* (Catalogue No. 21-003) for October-December 1946. Monthly prices of grain and of live-stock are carried in the current issues of the same publication.

Subsection 8.—Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer.

All basic foods are classified under 12 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (by weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 44 represents the official estimates of yearly supplies of food going into consumption, expressed in pounds per capita, for the years 1961-65 as an average for comparison with the years 1965 and 1966.

44.—Per Capita Supplies of Food Moving into Consumption 1965 and 1966, with Average for 1961-65

Kinds of Food and Weight Base	Pounds per Capita per Annum			Percentages of 1961-65 Average

Section 5.—Agricultural Statistics of the Census*

Canadian agriculture has experienced considerable change, particularly during the past two decades, the trend being to increased mechanization and specialization and to fewer but larger farms. Although agricultural production in value terms showed a large increase during the 1946-66 period, rising from \$1,331,000,000 to \$2,952,000,000 or by 121.8 p.c., its rate of increase was less than that of most other industrial groups. The proportion represented by agriculture of the "total gross domestic product at factor cost" in 1966 was 5.9 p.c. compared with 12.3 p.c. in 1946. In real terms, the increase in agriculture from 1946 to 1966 was 53.1 p.c. This represents an over-all annual rate of growth of 1.8 p.c. compared with an increase for all industries of 4.7 p.c. per annum.

The changes that have occurred in the agricultural industry are revealed by the results of the Census of Agriculture taken every five years. Certain analyses of the results of the 1966 Census are compared with those of the 1961 Census in this Section. The term *census-farm*, which is used throughout, refers to an agricultural holding of one acre or more in size with sales of agricultural products during the 12 months preceding the census date of \$50 or more. Census-farms having sales of \$2,500 or more during the preceding year are described as *commercial farms*.

Number and Area of Farms.—There were fewer census-farms in Canada in 1966 than in 1961, the number dropping 10.5 p.c. from 480,903 to 430,522. A decrease was shown in each province, the highest proportionate drop being 26.1 p.c. in New Brunswick and the lowest 2.5 p.c. in Newfoundland. On a regional basis, the trend was most pronounced in the Atlantic region where the decrease was 21.0 p.c. and least pronounced in the Prairie region where it was 7.4 p.c.

Although farm numbers were lower, the total area of census-farms was almost 1 p.c. higher, increases in the Prairie region and British Columbia more than offsetting decreases in the Atlantic and Central regions. Thus, while the number of census-farms in the Prairie region decreased 7.4 p.c., the farm area increased 2.8 p.c. Similarly, in British Columbia the number of farms decreased 4.3 p.c. but farm area increased 17.4 p.c.

46.—Number and Area of Census-Farms and Commercial Farms, by Province, Censuses of 1961 and 1966

Province or Territory	Census-Farms				Commercial Farms

Of the 430,522 census-farms in 1966, 276,835 were classed as commercial, representing an increase over 1961 of nearly 7 p.c. There were more commercial farms in every province except Nova Scotia and New Brunswick but 75 p.c. of the increased number were located in the Prairie region. Commercial farms comprised 64.3 p.c. of all census-farms in 1966 but accounted for 81.5 p.c. of the agricultural land; in 1961 the proportions were 53.9 p.c. and

* Details are contained in Volumes III, IV and V of the 1966 Census of Agriculture. The 1968 Year Book contains, at pp. 527-531, summary figures relating to the economic classification and type of farms, the tenure and age of farm operators and farm electrification.

73.1 p.c., respectively. The total area of all commercial farms was 12.5 p.c. higher in 1966 than in 1961, an increase to which every province contributed. The largest percentage increase in area occurred in British Columbia and the largest increase in acreage occurred in Saskatchewan.

Land Use.—There was an increase in both the total land area and the improved land area of all census-farms in Canada between 1961 and 1966. Although the increase in total land area was only 0.9 p.c., the area of improved land was 4.6 p.c. higher. Most of the decrease in unimproved land was accounted for by a drop of more than 3,000,000 acres in woodland.

An interesting parallel exists between the 10.6-p.c. increase in the area in crops and the 9.2-p.c. decrease in the area in summerfallow. A good part of this is probably attributable to the increased use of fertilizer and better weed control measures which have lessened the need for summerfallow in the Prairie Provinces. The change expressed in acres, however, shows a different picture. There were 6,617,470 more acres in crops in 1966 than in 1961; on the other hand, the summerfallow acreage decreased by 2,611,703 acres. Therefore not all of the increased area in crops can be accounted for by the decrease in the area in summerfallow. A substantial part must be attributable to the increase in total land area of all census-farms and to the decrease in the area of unimproved land. The small increases in improved pasture and other improved land are probably also attributable to the decrease in the area of unimproved land.

¹ Includes field, vegetable, fruit and nursery crop land.

Size of Census-Farms.—During the 1961-66 period the average size of census-farms continued the previously observed rising trend, increasing by 45 acres from 359 to 404 acres; the average size over the 1951-66 period increased by 125 acres. On a provincial basis, the 1961-66 change varied from a decrease of two acres in Newfoundland to an increase of 77 acres in Saskatchewan. On a regional basis, the Prairies had the largest increase, from 617 to 685 acres, contrasted with the Central region where the increase was only from 151 to 161 acres.

The number of census-farms of 760 acres or more increased between 1961 and 1966 but those of under 760 acres declined. The pattern is generally similar in all provinces—the number of smaller holdings tends to decrease while the number of larger ones increases, although there is considerable variation among various size groups between provinces. Manitoba, Saskatchewan and Alberta, where the trend toward larger farms is more pronounced than in other provinces, also show slight increases in number of census-farms falling into the two smaller size groups—under nine acres and 10-to-69 acres.

For Prince Edward Island, Nova Scotia, New Brunswick, Quebec and Ontario the predominant size group is still the 70-to-239-acre group, even though there has been a drop in the number of census-farms in this category. The 240-to-399-acre group is the predominant one in the Prairie Provinces, but in Saskatchewan almost as many census-farms fall into the 400-to-559, 560-to-759 and 760-to-1,119-acre groupings as in the 240-to-399-acre category. In British Columbia the largest number of census-farms are in the 10-to-69-acre group. More than half of the census-farms in Newfoundland are under nine acres in size.

Farm Tenure.—The decline in the number of farms and their increase in size and in capital investment led to changes in farm tenure in Canada between 1961 and 1966. The proportions of census-farms operated by the owner and operated by a manager remained fairly constant between 1961 and 1966 but there was a small decrease in the proportion of those operated by a tenant which was compensated by an increase in the part-owner-part-tenant category.

The number of census-farms operated by the owner decreased by almost 40,000 from 2,824 to 313,156 in the five-year period but the proportion of the total accounted for by such farms dropped only from 72.9 p.c. to 72.2 p.c., indicating that the decrease was largely a reflection of the smaller number of census-farms in 1966. The relative importance of owner-operated farms decreased from 5.8 p.c. in 1961 to 4.6 p.c. in 1966, but this represented a drop of almost one third in number from 27,696 to 19,769. While the number of part-owner-part-tenant-operated farms dropped slightly, their relative importance increased from 20.8 p.c. of the total to 22.7 p.c.

In the *Atlantic region* there was a drop of 4.1 p.c. in the proportion of census-farms operated by the owner which was offset by an increase of 3.8 p.c. in the part-owner-part-tenant category. The drop of about 7,000 in the number of census-farms between 1961 and 1966 was almost identical to the decrease in the number of owner-operated farms during the same period. The number of census-farms in the other three tenure groups, which accounted for only 15.8 p.c. of the total in 1966, changed little in the five-year period.

In the *Central region* owner-operated farms accounted for 82.4 p.c. of the total number in 1966 compared with 85.1 p.c. in 1961 and part-owner-part-tenant-operated farms increased from 11.2 p.c. to 14.1 p.c. The proportion of tenant- and manager-operated census farms remained almost identical for both years. The number of owner-operated farms decreased by approximately 28,000 between 1961 and 1966, which was slightly more than the decrease in the total number of all census-farms for the region. Tenant-operated census-farms dropped from 6,863 in 1961 to 5,656 in 1966, while the part-owner-part-tenant group increased from 24,400 to 26,880. The manager-operated group remained virtually unchanged.

Contrary to the situation in other regions, the proportion of owner-operated census farms in the *Prairie region* increased during the 1961-66 period, even though there was a drop of some 3,000 census-farms in this group. In 1961 the 119,769 owner-operated farms represented 56.9 p.c. of the total and in 1966 the 116,683 owner-operated farms accounted for 59.9 p.c. of the total; tenant-operated census-farms accounted for 9.4 p.c. of the total in 1961 and 6.7 p.c. in 1966; and the part-owner-part-tenant-operated farms, although decreased in number, accounted for a slightly larger proportion of the total (32.8 p.c.) in 1966 than in 1961 (33.2 p.c.). There was little change in the number and proportion of manager-operated census-farms.

In *British Columbia* the number of owner-operated census-farms decreased by 1.17 between 1961 and 1966, representing a drop of 2.5 p.c. in the proportion of this group to the total. This was larger than the decrease in the total number of census-farms, indicating a shift away from the owner-operated category. There was also a small decrease in the number and proportion of the tenant-operated group but the proportion of part-owner-part-tenant census-farms increased from 13.2 p.c. of the total to 16.2 p.c. Here, too, the number and proportion of manager-operated census-farms remained virtually unchanged.

Size of Census-Farms by Tenure.—The average size of census-farms in 1966 ranged from 3,383 acres for those operated by a manager to 264 acres for the owner-operated group. Tenant-operated census-farms averaged 375 acres in size and those in the part-owner-part-tenant-operated category averaged 783 acres. The average size of all census-farms was 404 acres. There was a high degree of correlation between size of census-farms and tenure. A large proportion of the owner-operated farms fell into the smaller size groups, while the part-owner-part-tenant-operated category accounted for a high percentage of the large size groups. In 1966, 91 p.c. of all census-farms under three acres in size were operated by the owner but in the size group 1,600-acres-and-over only 17.1 p.c. were owner-operated. The opposite trend was observed in the part-owner-part-tenant category which accounted for 74.6 p.c. of all census-farms of 1,600 acres and over but for only 0.9 p.c. of those under three acres.

Farm Capital by Tenure.—The influence of farm capital on tenure is a logical consequence to the increasing size of census-farms. As census-farm operators increase the size of their holdings, substitute machinery for labour and increase their livestock operation there is a parallel increase in farm capital, which is reflected in the type of tenure. For example, owner-operators wishing to expand may seek to rent additional land, because of the limited amount of capital at their disposal, thereby causing a shift from the category of owner-operated census-farms to the part-owner-part-tenant category. Similarly, a manager operator may prefer to rent a larger farm than to own a small one, or a number of tracts of land may be amalgamated by an entrepreneur who hires a manager.

In 1966, census-farms operated by a manager had, on average, a much larger capital investment than those operated under other forms of tenure. They also had the largest average capital investment in land and buildings, machinery and equipment and livestock and poultry. Owner-operated census-farms had the lowest capital investment per census farm, the lowest average value of land and buildings, the lowest average value of machinery and equipment, but only the second lowest average value of livestock and poultry. Tenant

operated census-farms had the lowest average value of livestock and poultry. It is interesting to note that the proportion of the capital investment in land and buildings, machinery and equipment and livestock and poultry did not vary much among the four forms of tenure.

Non-resident Operators.—A census-farm operator is classified as non-resident if he reports that he did not live on the holding during the past 12 months. In 1966 there were 65,226 non-resident census-farm operators, representing 8.2 p.c. of all the census-farms in Canada; in 1961 the 37,099 non-resident operators represented 7.7 p.c. of the total. Approximately three quarters of the non-resident census-farm operators for all of Canada were found in the Prairie region, where they accounted for 14.3 p.c. of the census-farms for that area. Non-resident operators were least significant in the Atlantic region where there were only 714, representing 2.7 p.c. of the total number of census-farms.

Among the provinces, Saskatchewan had, by far, the largest number of non-resident census-farm operators—16,861, comprising 19.7 p.c. of all the census-farms in that province; Newfoundland, with 100 non-resident operators, had the smallest number. The smallest proportion was found in Quebec where non-resident operators accounted for only 1.9 p.c. of the census-farms.

Farm Mechanization and Labour.—One of the most significant trends observed on Canadian farms in the postwar period has been the increased mechanization and the decreasing use of labour. While this process is continuing, a larger share of the farm capital is being channelled into land, buildings and livestock. The amount of capital invested in machinery and equipment on Canadian census-farms increased by 38.3 p.c. between 1961 and 1966. However, the value of machinery and equipment as a proportion of the total capital decreased from 19.5 p.c. to 18.6 p.c. during this period, similar to the trend observed between 1951 and 1961. The average value of machinery and equipment per census-farm in the Prairie region in 1966 was \$11,219. In the Atlantic region it was \$4,182 and in the central region \$5,954. The average value of machinery and equipment per acre under crop was lowest in the Prairie region and highest in the Atlantic region and in British Columbia where the average area under crops per farm is lower. Table 50 illustrates the increasing mechanization on farms between 1961 and 1966. Every item of machinery and equipment enumerated showed an increase over 1961 except for automobiles.

Hired Agricultural Labour.—There were 12.8 p.c. fewer paid year-round workers employed on census-farms in Canada in 1966 than in 1961. The number of census-farms reporting cash wages paid was 14.7 p.c. lower but cash wages paid increased by 11.1 p.c.

Most of the decrease in the number of paid year-round agricultural workers occurred in the Central region where only 20,305 were employed in 1966 compared with 25,695 in 1961; in the Prairie region there was very little change.

Off-Farm Work.—Off-farm work as an alternate source of income is increasing on Canadian census-farms. In 1966, 165,723 census-farm operators reported that they had worked off their holding during the previous 12 months; the corresponding number in 1961 was 153,675. The proportion of all census-farm operators reporting off-farm work increased from 32.0 p.c. in 1961 to 38.5 p.c. in 1966. It was highest in the Atlantic region (48.2 p.c.) and in British Columbia (50.0 p.c.) and lowest in Saskatchewan (27.4 p.c.).

Economic Classification and Types of Farms.—Economic classification consists in the grouping of census-farms according to the value of agricultural products sold during the 12-month period preceding the census date, June 1. On a national basis, 13.5 p.c. of all census-farms had sales of \$5,000 to \$7,499 in 1966. This economic class comprised the largest number of commercial farms (with sales of \$2,500 or more) of all the sales groupings. The predominant economic class of commercial farms in all four provinces in the Atlantic region and in Quebec was \$2,500 to \$3,749. The predominant class for Ontario and the three Prairie Provinces was \$5,000 to \$7,499. Although the economic class \$2,500 to \$3,749 comprised the largest number, commercial farms in British Columbia were fairly evenly distributed within the ranges of sales for commercial farms.

The average total capital value per census-farm in 1966 was \$44,307, an increase of 61.8 p.c. over the average of \$27,389 in 1961. The 1966 average was made up of \$30,600 in land and buildings, \$8,251 in machinery and equipment and \$5,456 in livestock and poultry. The average total capital investment per acre in 1966 was \$110.

Much of the increase in total farm capital in 1966 was accounted for by a large increase of 52.8 p.c. in the value of land and buildings, compared with increases of 38.3 p.c. in machinery and equipment and 18.6 p.c. in livestock and poultry. The value of land and buildings made up 69.1 p.c. of the total farm capital in 1966, compared with 65.5 p.c. in 1961; in the same comparison the value of machinery and equipment accounted for 18.6 p.c. and 19.5 p.c., respectively, and the value of livestock and poultry for 12.3 p.c. and 15.0 p.c., respectively.

There were more census-farms in the lower capital values in the Atlantic region and in Quebec than there were in other areas. In New Brunswick, for example, 74.4 p.c. of all census-farms had a total capital investment of less than \$19,950. The corresponding proportion in Saskatchewan was 17.6 p.c. Also, census-farms with higher capital investments tend to have larger sales of agricultural products. For instance, of all the census-farms with a total capital value of between \$24,950 and \$49,949, 86.2 p.c. had sales of agricultural products of less than \$10,000. However, of those with a capital value of \$49,950 to \$99,949 only 51.5 p.c. had sales of less than \$10,000.

Commercial Farm Classifications.—In 1966 only commercial farms were classified by product type. A criterion of 51.0 p.c. or more of the total sales was used for the classification. For example, a commercial farm was typed as a poultry farm if 51.0 p.c. or more of the total agricultural sales from this holding was obtained from the sale of poultry products. Of the 276,835 commercial farms, 71,413 or 25.9 p.c. were classified as wheat, and 70,936 or 25.6 p.c. were classified as cattle, hogs and sheep. These two types when added to the dairy type accounted for 71.9 p.c. of all the commercial farms in 1966. There was a change in the relative importance of the types between 1961 and 1966. In 1961, cattle, hogs and sheep farms were the most numerous followed by dairy and wheat. Dairy, poultry, fruits and vegetables, forestry and mixed combination farms decreased in relative importance.

On dairy-type farms in 1966, 74.5 p.c. of the income from the sale of agricultural products came from dairy products, 18.8 p.c. from the sale of livestock and 6.7 p.c. from the sale of all other agricultural products. The high degree of specialization on poultry-type farms is illustrated by the fact that 90.8 p.c. of the sales of agricultural products were from poultry and eggs. In contrast, livestock, the largest source of revenue on mixed combination farms, accounted for only 35.5 p.c. of the sales of agricultural products.

Total sales of agricultural products for all commercial farms in 1966 averaged \$11,462. The average of total sales per commercial farm for poultry-type farms, at \$35,334, was the highest and mixed combination farms reported the lowest average at \$8,920 per farm.

In 1966, only 3.7 p.c. of all commercial farms in Canada reported sales of agricultural products valued at \$35,000 and more, although 27.0 p.c. of the poultry-type farms reported total sales in excess of \$35,000. On the other hand, 17.0 p.c. of all commercial farms reported sales in the lowest category of \$2,500 to \$3,749; the proportion of forestry-type farms falling into this category was 45.9 p.c. The predominant economic class for all commercial farms was \$5,000 to \$7,499 in which six of the 10 farm types were classed. For poultry, other field crops, and miscellaneous specialty farms, the predominant economic class was higher than for all commercial farms taken as a group; for forestry-type farms it was lower.

The predominant size-group for all commercial farms in Canada in 1966 was 70 to 239 acres. This was also the predominant size-group for dairy, cattle, hogs and sheep, poultry, other field crops and mixed combination types of farms; the predominant size for fruits and vegetables and miscellaneous specialty farms was 10 to 69 acres.

For wheat and small grains farms there was a wide dispersion of farm numbers in the larger size-groups but the four size-groups falling between 240 and 1,119 acres accounted for 76.9 p.c. of all commercial farms typed as wheat; the five size-groups between 70 and 1,119 acres accounted for 86.5 p.c. of all small grains producing farms.

Of all the commercial farms in Canada in 1966, those typed as wheat reported the largest average capital investment per farm (\$67,535); in 1961, wheat farms ranked sixth in average total capital value per farm behind other field crops, small grains, miscellaneous specialty, cattle, hogs and sheep, and fruits and vegetable farms. In 1966 as in 1961, forestry-type farms had the lowest average capital value per farm (\$30,533).

The value of land and buildings accounted for more than 60 p.c. of the total capital value for each of the various types of commercial farms in 1966. For all commercial farms the value of land and buildings accounted for 68.3 p.c. of the total capital value and machinery and equipment for 19.1 p.c.

Section 6.—International Crop Statistics

Tables 51 and 52 are based on estimates published in March and April 1968 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1966 and 1967 with average for the years 1960-64, in the leading countries of the world.

51.—Estimated Acreages and Production of Wheat Harvested in 1966 and 1967 in Specified Countries, with Average for 1960-64

NOTE.—Years shown refer to years of harvest in the Northern Hemisphere. Harvests of Northern Hemisphere countries are combined with those of the Southern Hemisphere which immediately follow.

*The interpretation of the symbols used in the tables throughout the Year Book
will be found on p. viii of this volume.*

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. Perhaps in no other country is the national wealth so dependent upon its forest resources and the success of its forest industries as in Canada.

The annual forest harvest of some 3,849,000,000 cu. ft. of roundwood supports a highly complex and diversified domestic and export industry. The forest industries (which include the logging industry, the wood industries and the paper and allied industries) provide more than 270,000 man-years of employment and pay out more than \$1,500,000,000 annually in salaries and wages. In addition, a considerable number of people derive part of their income from farm woodlot operations, etc. The forests support a large number of sawmills and wood-using plants which in many cases are located in small towns and villages and contribute appreciably to the local economies. The sale of forest products abroad represents about one fifth of the value of Canada's export trade.

The predominant part played by the pulp and paper, lumber and other forest products industries in the development of the country and in its current economy has resulted in a widespread tendency to evaluate the forest in terms of timber alone. But equally important is the fact that the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature—in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals. It is reassuring that a growing realization of the economic importance of the forest for its non-commercial values, including recreation and wildlife and watershed protection, is bringing about increasing recognition of the true value of the forest and is thus developing a broader concept of forestry.

* Sections of this Chapter that deal with forest resources and depletion and the federal forestry program were revised by the Forestry Branch of the Department of Fisheries and Forestry, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Manufacturing and Primary Industries Division, Dominion Bureau of Statistics.

Section 1.—Forest Resources

Forest Regions.*—The forests of Canada cover a vast area in the north temperate climatic zone but wide variations in physiographic soil and climatic conditions cause marked differences in their character in different parts of the country; hence, eight fairly well-defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

<i>Region</i>	<i>Percentage of Forest Area</i>		<i>Region</i>	<i>Percentage of Forest Area</i>
Boreal.....	82.1		Acadian.....	2.0
Great Lakes-St. Lawrence.....	6.5		Columbia.....	0.8
Subalpine.....	3.7		Deciduous.....	0.4
Montane.....	2.3			
Coast.....	2.2		TOTAL.....	100.0

Boreal Forest Region.—This Region comprises the greater part of the forest area of Canada, forming a continuous belt from Newfoundland and the Labrador coast westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic species; other prominent conifers are tamarack which ranges throughout, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, there is a general admixture of broadleaved trees such as the white birches and poplars; these are important in the central and south-central portions, particularly in the zone of transition to the prairie. In turn, the proportion of spruce and tamarack rises northward and, with increasingly rigorous climatic conditions, the close forest gives way to the open lichen-woodland which finally merges into tundra. In the east there is, along the southern border of the Region, a considerable intermixture of species from the Great Lakes-St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Great Lakes-St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars and white birch, are intermixed and, in certain humid portions of the east, red spruce is abundant.

Subalpine Forest Region.—This is a coniferous forest found on the mountain uplands in Western Canada. It extends northward to the major divide separating the drainage of the Skeena, Nass and Peace Rivers on the south and to that of the Stikine and Liard Rivers on the north. The presence of the black and the white spruces plus aspen and birch indicates a close relationship with the Boreal Region, and the characteristic species—Engelmann spruce, alpine fir and lodgepole pine—have boreal counterparts. There is some entry of blue Douglas fir from the Montane Forest and of western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine, limber pine and, on the coastal mountains, yellow cedar and mountain hemlock.

Montane Forest Region.—The Region occupies a large part of the interior uplands of British Columbia as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern

* A more detailed discussion of forest regions is given in Bulletin 123, *Forest Regions of Canada*, published by the Forestry Branch of the Department of Fisheries and Forestry.

portions. Blue Douglas fir is found throughout but more particularly in the central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region together with white birch are important constituents in the northern parts. The white spruce, although primarily boreal in affinity, is also present here. Extensive prairie communities of bunch-grasses and forbs are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock, with abundant Sitka spruce in the north and with the addition of Douglas fir in the south. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common toward the timber-line. Western white pine is found in the southern parts and western yew is scattered throughout. Broadleaved trees, such as black cottonwood, red alder and broadleaf maple, have a limited distribution. Arbutus and Garry oak, species whose centres of population lie southward in the United States, occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland.

Acadian Forest Region.—Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes-St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was once an important forest constituent but the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, although present in New Brunswick, is extremely rare elsewhere and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

Columbia Forest Region.—A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species in this interior "wet belt". Associated trees are the blue Douglas fir which is of general distribution and, in the southern parts, western white pine, western larch, grand fir and western yew. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the Region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

Deciduous Forest Region.—A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broadleaved trees common to the Great Lakes-St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

Forest Land.—The forest area of Canada is estimated at 1,710,788 sq. miles, about 57 p.c. of which is "productive" in the sense that it is capable of producing merchantable timber; the remainder is incapable of producing merchantable timber because of adverse climatic, soil or moisture conditions or is reserve forest land for which no inventories are available. Table 1 shows the areas of productive and non-productive forest land in each province and territory; forest land in each province classified by type of growth is given in Chapter I at p. 25.

1.—Productive and Non-productive Forest Land, by Province

Province or Territory	Productive Forest Land	Non-productive Forest Land	Total
	sq. miles	sq. miles	sq. miles
Newfoundland.....	33,862	53,930	87,792
Prince Edward Island.....	813	121	934

Canada.....	959,849	750,939	1,710,788

Inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the Forestry Branch of the Department of Fisheries and Forestry compiles national statistics. The latest estimates of the total stand of merchantable timber, by province and region, appear in Table 2. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

¹ Ten inches D.B.H. or over (suitable for saw timber).² Four to nine inches (units of 85 cu. ft.).

Tenure of Forest Land.—Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 23 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 430,522 farms (1966) across the country comprise about 3 p.c. of the total productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern part of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

3.—Tenure of Occupied Productive Forest Land, by Province

(Net area in sq. miles)

Province or Territory	Provincial Crown Land			Federal Crown Land	Privately Owned Land			Total Occupied Productive Forest Land
	Leases and Licences	Permits and Sales	Total		Farm Woodlots	Other	Total

¹ Includes 16 sq. miles of "other" provincial Crown land.

² Of this total, 320 sq. miles are under lease or licence—293 sq. miles in Alberta, the 25 sq. miles in the Yukon Territory and the 2 sq. miles in the Northwest Territories.

Canada's Forest Trees.*—There are more than 150 tree species in Canada, of which 31 are conifers or 'softwoods'. About two thirds of these softwoods and one tenth of the large number of the deciduous or 'hardwood' species are of commercial value.

The spruces are the most important forest trees in Canada. Although red spruce is found only in Eastern Canada, and Sitka and Engelmann only in the far west, black spruce and white spruce are found from the Atlantic almost to the Pacific, and northward to Alaska. About one third of Canada's timber volume is spruce. The wood is used for pulpwood, lumber and plywood.

Second only to the spruces are the two-needled pines—jack pine, which grows from Nova Scotia to northern Alberta and the Northwest Territories, and lodgepole pine in western Alberta, British Columbia and Yukon Territory. These pines comprise 11 p.c. of Canada's standing timber volume.

Third in importance are the true firs, of which the most widely distributed is the balsam fir, found from the Atlantic seaboard west to north-central Alberta. In the far

* Prepared by John W. Ker, Professor of Forestry, University of New Brunswick; reproduced courtesy Timber-jack Machines Limited. The dominant species existing in each forest region are given on pp. 528-529 and detailed information is contained in Department of Fisheries and Forestry Bulletin No. 61, *Native Trees of Canada*.

west are three species: grand fir, which grows on the southern coast of British Columbia and in the southern interior; amabilis fir, found at intermediate levels on the coast; and alpine fir, which grows in the mountains and interior of British Columbia, the foothills of Alberta and southern Yukon Territory. The wood is commonly cut as pulpwood and to a lesser extent, as sawlogs.

Next in abundance is a family of eight broadleaved deciduous trees: the trembling aspen, largetooth aspen, balsam poplar and five cottonwoods—the eastern, black, lanceleaf, narrowleaf and plains cottonwood. The most widely distributed is the trembling aspen, followed by the balsam poplar. The black cottonwood reaches the largest size in this family. In demand for veneer stock, this species and its hybrids will yield large wood volumes per acre on short rotations under intensive management. The other species in this group are used in the manufacture of excelsior and soda pulp.

Fifth among Canada's forest trees is the hemlock. Three species are native to Canada: eastern hemlock grows in the Maritimes, southern Quebec and Ontario; western hemlock at lower and intermediate levels throughout the coastal and interior wet belts of British Columbia; and mountain hemlock at higher elevations in the southern mountains of British Columbia, growing down to sea level on wet, exposed sites on the northern coast and the panhandle of Alaska. Western hemlock is a valuable pulpwood species. Eastern hemlock is a main commercial source of tannin and the wood is used for railway ties, wood-stave pipe, lumber and pulp. Mountain hemlock is not important as a timber species.

The tree responsible more than any other for British Columbia's world-wide reputation for timber is the coastal form of the Douglas fir, which is dominant in the forests of the south coast and the southeastern half of Vancouver Island. An interior form, the blue Douglas fir, is widely distributed throughout the Rocky Mountain system. Douglas fir is used extensively for lumber, plywood, construction timbers, piling and kraft pulp.

Next in order are the cedars, including arborvitae and yellow cedar. The eastern white cedar is found from western Nova Scotia to Manitoba; its wood is light and resistant to decay. The western red is of prime importance to British Columbia. In virgin forests, it attains heights of 150 to 200 feet and diameters of 8 to 10 feet. It is used for lumber, hand-split shakes, shingles, poles and posts. At higher altitudes on the British Columbia coast, the red cedar is replaced by the yellow cedar. The wood of this species also resists decay and is prized for boat-building and interior finishing. It is useful for poles, piling and as battery separators.

Finally, there are the birches. Most abundant is the white birch which grows widely throughout Canada. Western white birch is a large tree, reaching heights of 100 feet and diameters of three to four feet. It is found in northern and western Alberta, in British Columbia and also on the Atlantic Coast in the east. However, the most important hardwood tree in Eastern Canada is the yellow birch, which grows in southern Newfoundland, the Maritimes, Quebec and Ontario. Its wood is much in demand for flooring, furniture, veneer and railroad ties.

Canada is indeed fortunate to possess such a diversity of useful tree species. The white pine and spruce in the east, and Douglas fir, western red cedar and western hemlock in British Columbia have won for Canada its enviable position as the world's leading nation in forest products trade.

Section 2.—Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 4.

The latest information available on the rate and causes of depletion of reserves of merchantable timber is given in Table 4. These data are not directly comparable with those given in previous Year Books. For instance, earlier DBS figures for British

Columbia differed from those issued by the British Columbia Forest Service because the latter used different conversion factors and different classifications for wood cut in the forests. The DBS is now using British Columbia Forest Service production figures so that the former confusion often encountered by users has been eliminated. Detailed information is given in DBS publication *Logging, 1963* (Cat. No. 25-201).

Table 4 shows only the depletion of the forests caused by utilization and by fire. Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available. Losses from insects and diseases alone are estimated to be in excess of 1,000,000 M cu. ft. of merchantable timber annually.

The productive forests of Canada covering an area of 959,849 sq. miles constitute the reserve from which forest production will be obtained in the immediate future. The supply of merchantable timber on this area is estimated at 748,982,000 M cu. ft. and the average annual utilization in 1956-65 of 3,326,494 M cu. ft. therefore represented less than one half of one percent of the supply. However, it should be noted that utilization does not occur evenly throughout the productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain their important position in the Canadian economy. Also, efficient utilization of cut timber is an important factor related to forest depletion.

4.—Forest Utilization and Depletion by Fire, Ten-Year Average 1956-65

Item	Usable Wood	Percentage of Total Depletion
	M cu. ft.	
Products Utilized—		
Logs and Bolts—

Wastage—		
By forest fires.....	497,584	13.0
Totals, Depletion.....	3,824,078	100.0

Forest Fire Statistics.—The number of forest fires reported in Canada during 1967 totalled 8,650, second only to the record high of 8,655 reported in 1961. The 1967 total compares with 7,468 during the 1966 fire season and an annual average of 6,903 for the ten-year period 1957-66. Despite a near record number of fires, the area burned in 1967 was below the ten-year average—2,211,954 acres compared with 2,342,482 acres, respectively. Some 85 p.c. of the total acreage destroyed was reported within the provincial boundaries which accounted for the unusually high monetary losses in the latest year.

Of the 8,650 forest fires reported, some 6,429 or 74 p.c. were caused by human carelessness, recreationists accounting for 25 p.c. and settlers for 12 p.c. However, because a high proportion of man-caused fires occur in areas easily accessible to fire-fighting forces, fires attributed to this cause are generally more easily controlled than those started by lightning. Only 26 p.c. of all fires were ignited by lightning but this single cause accounted for 73 p.c. of the total area burned during the 1967 fire season.

Section 3.—Statistics of Forest and Allied Industries

This Section is concerned with the many industries engaged in the felling of timber and its transformation into a great variety of products required in modern living. The extensive forests of Canada provide raw materials for several large and growing primary industries, i.e., the sawmills and planing mills, the shingle mills, the veneer and plywood mills, the particle board plants and the pulp and paper mills, which in their turn provide raw materials for a wide range of secondary industries that convert the products of the primary industries into more highly manufactured goods such as sash, doors, mill work, wooden boxes, furniture, converted papers and paper goods, etc. However, much of the output of the primary forest industries is exported; the sawmill industry and the pulp and paper industry, especially, contribute substantially to the value of the export trade of Canada and thereby provide an important part of the foreign exchange necessary to pay for the imports from other countries.

Statistics of manufacturing activity and total activity of the wood industries and the paper and allied industries may be found in a number of tables in Chapter XVI on Manufactures. These statistics and those included in the tables of this Section are based on the revised standard industrial classification and the new establishment concept, explained in Chapter XVI.

Subsection 1.—Logging Industry

The forests of Canada provide the raw materials for its sawmills and planing mills, shingle mills, veneer and plywood mills, particle board plants and pulp and paper mills as well as roundwood for export in unmanufactured state and other products such as fuelwood, poles and piling, fence posts, mining timber, Christmas trees, etc. Tables 8 and 9 give the estimated quantities of wood cut in Canada by province and by type of product. In estimating the annual cut, certain factors have been used to convert commercial units to cubic feet. These are as follows (British Columbia estimates are supplied by the British Columbia Forest Service):—

Product		Equivalent Volume in Cubic Feet		
		British Columbia Coast	Interior	Other
Logs and bolts.....	M ft.b.m.	166.6	173.9	200
Pulpwood.....	cord	80	80	85

New logging machinery and equipment is continually being designed and tested by individual industries and associations. One of the latest is the mobile machine that de-limbs, de-barks and cuts the tree into predetermined lengths in one operation.

Subsection 2.—Wood Industries

The standard industrial classification subdivides the wood industries group into the following industries: sawmills and planing mills, shingle mills, veneer and plywood mills, sash, door and other millwork plants, hardwood flooring mills, wooden box factories, the coffin and casket industry and miscellaneous wood industries. The latter item is further subdivided into the wood preservation industry, the wood handles and turning industry, the woodenware industry, the cooperage industry and miscellaneous wood industries, *n.e.s.*

The sawmills and planing mills, the shingle mills, the veneer and plywood mills and the particle board plants (the latter are included in the miscellaneous wood industries, *n.e.s.* group) mainly use roundwood as a raw material and sometimes are called primary wood industries and are dealt with separately below. The other industries, which constitute the secondary wood industries, further manufacture part of the production of the primary wood industries into a great variety of products. However, most of the production of the primary wood industries is not further processed.

Sawmill and Planing Mill Industry.—Lumber is by far the most important single product of this industry and, as shown in Table 10, British Columbia is the most important province in this field. It should also be noted that the shipment figures of Tables 10 and 11 contain a certain element of duplication because sales of lumber from one sawmill to another will be reported as shipments by both establishments. Similar situations occur in most industries to a greater or lesser extent.

In addition to the lumber produced by the sawmill and planing mill industry, a small amount is produced by establishments classified to other industries, bringing total lumber production in Canada in 1966 to 10,373,199 M ft. b.m. compared with 10,815,355 M ft. b.m. in 1965.

Totals.....	10,510,111	749,242	10,217,934	767,773

Shingle Mill Industry.—Most of the shingles and shakes produced in Canada are from British Columbia mills. All establishments classified to this industry reported, for the year 1966, shipments of 1,966,366 squares of shingles and shakes valued at \$25,048,000, of which British Columbia accounted for 1,886,861 squares valued at \$24,362,000. However, it should be mentioned that considerable quantities are produced by establishments classified to other industries and by individuals intermittently operating one or two shingle

machines or producing by hand; although no adequate measure of this production is available, it is known to contribute significantly to the total. Of the total production in 1966, 2,341,209 squares were exported, 2,299,847 squares going to the United States.

Veneer and Plywood Industry.—The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces and the production of softwood veneer and plywood almost entirely to British Columbia. For the latter, Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. Of the hardwoods, yellow birch is by far the most important species. Although most of the raw materials for this industry are of Canadian origin, some decorative woods are imported, particularly walnut.

About 50 p.c. of the shipments of veneer, shown in Table 12, are softwood veneers; most of these are further manufactured into plywood by Canadian mills, thus contributing to the shipments of plywood shown in the same table. Some of the hardwood veneers are also shipped to other veneer and plywood mills for further manufacture or to other industries such as the furniture industry for veneering purposes, but a significant portion is exported. Total exports in 1966 amounted to 1,029,634 M sq. ft. valued at \$31,761,000, of which 986,914 M sq. ft. valued at \$29,052,000 went to the United States.

Most of the plywood is consumed in Canada, although exports are not unimportant; in 1966 these amounted to 49,504 M sq. ft. of hardwood plywood valued at \$8,261,000 and 509,884 M sq. ft. of softwood plywood valued at \$33,257,000. The greater part of the exports of hardwood plywood went to the United States (46,235 M sq. ft. valued at \$7,378,000) but most of the softwood plywood exports went to Britain (378,090 M sq. ft. valued at \$24,769,000).

Subsection 3.—Paper and Allied Industries

The standard industrial classification subdivides the paper and allied industries group into the following industries: the pulp and paper industry, the asphalt roofing manufacturers, the paper box and bag manufacturers, and other paper converters. Statistics of manufacturing activity and total activity of the paper and allied industries group are given in Chapter XVI on Manufactures.

Pulp and Paper Industry.—This industry is by far the most important of the group. In fact, it has been for many years the leading industry in Canada, contributing about 2 p.c. of the total gross national product and almost 16 p.c. (1966) of the total value of the country's exports. There were 134 pulp and paper mills in operation in 1966.

These mills consume enormous quantities of roundwood, 17,752,553 rough cords with a cost value of \$472,527,000 being so used in 1966. In that year, 122,405 cords of pulpwood were imported and 1,371,000 cords were exported. In addition, the pulp and paper mills use wood residues of the sawmill and other industries for pulping, such as cores of peeler logs, slabs and edgings or wood chips made thereof, shavings, etc., and recently even sawdust has been used successfully for this purpose. The total of such wood residues used by

the industry in 1966 amounted to the equivalent of 5,202,347 rough cords of pulpwood, valued at \$106,695,000. The industry also consumes large amounts of electric power, chemicals and other goods and services and requires great quantities of clean water.

Some of the production of the pulp and paper industry is consumed in Canada or serves as a raw material for the paper-using or secondary paper and allied industries and certain other industries, but a great part of it is exported, particularly newsprint and various types of pulp (see Table 15), most of it to the United States. Some plants included in the pulp and paper industry classification also convert basic paper and paperboard into more highly manufactured papers, paper goods and boards but their output represents only a small part of Canada's total production of converted papers and boards. Tables 13 and 14 give shipment and production figures for pulp and shipment figures for basic paper and paperboards for 1962-66, Table 15 shows exports of pulp and of newsprint to Britain, United States and all countries for 1962-67, and Tables 16 and 17 give world pulp and newsprint statistics for 1965 and 1966.

Asphalt Roofing Manufacturers.—These establishments produce composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and, in some cases, coated with a mineral surfacing. They also produce asphalt, vinyl-asbestos and pure vinyl floor tiles. Their total shipments in 1966 were valued at \$54,452,000 compared with \$57,760,000 in 1965.

Paper Box and Bag Industries.—These industries include manufacturers of folding cartons and set-up boxes, manufacturers of corrugated boxes and manufacturers of paper bags. Their total shipments in 1966 amounted, respectively, to \$156,685,000, \$211,493,000 and \$144,046,000, compared with \$143,877,000, \$193,052,000 and \$120,918,000, respectively, in 1965.

Other Paper Converters.—This group produces a host of paper products such as envelopes, waxed paper, clay-coated and enamelled paper and board, aluminum foil laminated with paper or board, paper cups and food trays, facial tissues, sanitary napkins, paper towelling and napkins, toilet tissue, etc. The total value of manufacturing shipments of this industry in 1966 amounted to \$301,326,000 compared with \$261,964,000 in 1965.

Section 4.—Forest Administration, Research and Conservation

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible through several departments and agencies for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, Indian reserves, military areas and forest experiment stations.

The main forestry functions of the Forestry Branch of the Department of Fisheries and Forestry (established as the Department of Forestry in 1960, re-named the Department of Forestry and Rural Development in 1966 when the Minister was given responsibilities under ARDA, and made a Branch of the Department of Fisheries and Forestry in 1969 when the ARDA responsibilities were transferred) include: (1) the conduct of research relating to the protection, management and utilization of the forest resources of Canada and the better utilization of forest products; (2) undertaking, promoting or recommending measures for the encouragement of public co-operation in the protection and wise use of the forest resources of Canada; (3) co-operating with provincial governments and others in matters relating to forestry; (4) provision of forest surveys and advice relating to the protection and management of federally administered forest lands; and (5) assuming responsibility for forest protection and management on federal lands at the request of the department or agency concerned. The Act provides for the establishment of research facilities and of forest experimental areas on federal lands.

The Branch maintains an Advisory Group to the Deputy Minister, whose main responsibilities are to develop policies and long-range plans for forest research, forest products research, forest economics and such other matters as federal-provincial relations and liaison with the forest industries and the academic community. A Directorate of Program Co-ordination provides national co-ordination of forestry research programs and supervises national research services at Ottawa. Research institutes and laboratories conduct fundamental research within prescribed fields, supporting and complementing the research programs carried out in seven administrative regions—Newfoundland, the Maritimes, Quebec, Ontario, Manitoba-Saskatchewan, Alberta-Yukon Territory-Northwest Territories, and British Columbia. Forest surveys are conducted on federal lands throughout the country and advice and assistance on forest management are given to the administering agencies. The Branch also provides for the management of forests, including timber disposal, in certain areas on behalf of other government departments. Co-operation is extended to the Canadian International Development Agency in administering technical

assistance programs involving forest surveys in other countries. The public information program conducted by the Branch includes the issuing of publications designed to increase public awareness of the importance of Canada's forest resources and the need for conserving them; the distribution of research publications and the interpretation of the scientific work of the Branch to industry and to the general public; the dissemination of departmental and forestry information to the press, radio and television; the production of exhibits, displays and posters; and the maintenance of a photographic library dealing with forestry subjects.

The research functions of the Branch are described in the following paragraphs.

Research on Silviculture, Tree Biology, Forest Soils and Fire.—The objects of such research are (1) to provide basic information on the characteristic occurrence, growth, development and behaviour of forest tree species throughout the wide range of forest types and environmental conditions of Canada and (2) to develop and test new or improved methods for use in forest management and forest fire control. The programs are conducted throughout Canada, often in co-operation with other federal departments, provincial forest authorities, other research agencies, universities and industry.

A substantial portion of the research program in silviculture involves the study of factors responsible for the success or failure of natural regeneration following various methods of cutting and treatment of seedbeds, and the development of improved methods of regenerating forest stands following logging or fire and of creating forests on abandoned farmland, heathland or bogland. Different methods of seeding and planting are being compared, and increased emphasis is being given to problems associated with container planting. The effects of mechanization of logging on reproduction and on slash and soil conditions are being investigated. Studies of different methods of stand tending such as pruning, cleaning and thinning are under way to determine means of increasing both quantity and quality of wood production. Investigations of successional changes are under way in most of the important forest types and the relation of forest growth to site is being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for seedlings. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest land encompasses forest geography and land classification. Research in soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Improved techniques for determining tree and stand volume are being developed and the various factors that influence growth are being investigated and quantified. Considerable attention is devoted to the evaluation of existing forest inventory methods and to developing new and improved techniques which incorporate the use of large-scale aerial photography. Studies of methods to estimate stand volumes from air photographs are continuing. Increased attention is being given to studies of growth and yield of typical forests and mathematical models are being developed to describe the growth responses of stands and individual trees.

Adequate protection of forests against fire is of vital importance in Canada. The Branch works in full co-operation with provincial forest services in almost all phases of forest fire control and has made major contributions in the fields of forest fire danger measurement and forecasting and in fire control planning. Investigations are being made of forest fire behaviour, of the use of prescribed fire for hazard reduction and seedbed preparation, of better methods of reporting forest fires, and of fire damage appraisal and related factors in forest protection standards. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, of fire fighting equipment and techniques, and of the use of aircraft in forest fire control. Another important field of endeavour is the study of fire hazard created by slash from various kinds of logging practices for different species.

Forest Products Research.—This work is directed toward obtaining background data on the properties of Canadian woods, developing new and better uses for wood products, improving methods of processing, and effecting more complete utilization of wood substances. Activities cover all major aspects of forest products and include the determination of the physical, mechanical, chemical and anatomical properties of wood and their relation to adaptability in use; studies of factors affecting quality of wood and of manufactured wood products; determination of factors that cause wood waste in logging and manufacturing; investigation into fire retardant treatments, the preservative treatment and painting of wood and the use of wood for the manufacture of a variety of products by chemical or mechanical means; and studies to determine possible new economic and more valuable uses for woods and to determine methods for the economical utilization of all wood substances available from the annual timber harvest.

The program is conducted mainly at two laboratories—at Ottawa and Vancouver—with units consisting of timber engineering, containers, glues and gluing, veneer and plywood, timber physics, wood chemistry, pulping, wood preservation, paints and coatings, wood pathology, products entomology, wood anatomy, logging, lumber manufacture and lumber seasoning. Research results are made available to the thousands of plants comprising Canada's timber-manufacturing and wood-using industries. Liaison is maintained with these industries to ensure that the research being conducted is of optimum national benefit. There is also constant co-operation with various government units in the performance of many investigations concerned with the use of wood. Research into the use of wood in housing construction and as an engineered material continues in co-operation with the National Research Council and the Central Mortgage and Housing Corporation.

At regional establishments, products research is planned on utilization problems of regional interest, and products liaison officers visit sawmills and other wood-working plants to keep industry aware of research developments and technical advances and, on the other hand, to keep the department informed of field problems on which research would be of value.

Branch personnel serve on many national and international technical committees concerned with forestry problems and continuous collaboration is maintained with forest products laboratories in other countries for the dual purpose of exchanging information and avoiding duplication of research.

Forest Insects and Diseases.—Research on forest insects and diseases is conducted at regional laboratories and field stations in all principal forest regions of Canada. A Canada-wide survey is undertaken in co-operation with the provincial forest services and forest industries to maintain an annual census of forest insect and disease conditions and to detect and predict the occurrence of outbreaks. Survey results are made available to owners and operators of forest lands for use in planning salvage programs and directing control measures to reduce damage.

Laboratory research programs are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects and diseases of tree seedlings in forest nurseries. Research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi. Problems of national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated.

Experiments are also carried out in insect and disease control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating quarantine pro-

grams, possibilities of eradication or control, or other applications of research results. Examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation and advisory services for local authorities on the Dutch elm disease problem; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick, the jack pine budworm in Manitoba, the ambrosia beetle in British Columbia, and the European pine sawfly in Ontario.

An insect pathologist at the federal Forest Research Laboratory in Fredericton, N.B., works on the development of virus insecticides, which is an important area of biological control research.

At the Petawawa Forest Experiment Station, Chalk River, Ont., an isolation tent is placed on a red-and-black spruce hybrid sapling to ensure self-pollination. Cross-breeding of species is carried out to develop faster-growing and more vigorous types.

Subsection 2.—Provincial Forestry Programs

All forest land in provincial territory, with the exception of the minor portions in National Parks, federal forest experiment stations, military areas and Indian reserves, is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland and Labrador.—Geographically, the Province of Newfoundland has two separate regions—the Island and Labrador on the mainland. The productive forest land is estimated at approximately 30,000 sq. miles about equally divided between the Island and Labrador. Most of Labrador's forests are leased but are as yet virtually untouched.

A large part of the forest land of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local populations. Within this coastal forest belt, every form of cutting is generally without intense control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by Forest Service Officers. Approximately one half of the Crown forests are at present under management. Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government.

The Island is divided into three forest regions, each of which is subdivided into five districts. Each region is under the control of a regional forester and each district is headed by a district ranger with a staff of rangers and assistant rangers. Twenty-five well-equipped forest fire depots and 20 lookout towers, connected by radiotelephone to district and regional offices, are operated by the Newfoundland and Labrador Forest Service; others are operated by the two paper companies which maintain their own forest fire protection organizations.

Forestry operations in Labrador are under the supervision of a regional ranger located at Happy Valley (Goose Airport). Forest fire protection bases are located near Goose Airport and at Labrador City, Churchill Falls, Cartwright and Makkovik.

The Forest Service operates 10 fixed-wing aircraft for forest fire detection and suppression and three helicopters for transporting men and equipment. The permanent Forest Service staff of approximately 90 persons is doubled during the fire season with the addition of seasonal employees.

Prince Edward Island.—Roughly one third of Prince Edward Island's 2,184 sq miles of land is tree-covered. The wooded areas consist of scattered patches throughout the province, the greatest concentration being in the eastern section. All of the woodland is privately owned except some three square miles of federal Crown land and about six square miles purchased recently through ARDA and turned over to the Crown in the right of the provincial government. The Forestry Division, Department of Agriculture, administers all forestry matters in the province but is mainly concerned with reforestation, protection and woodlot improvement. Although forestry is of secondary importance to the province, nevertheless the woodlots aid greatly in maintaining moisture for agriculture and form breaks against the average 15-mile-an-hour winds that blow across the Island.

The reforestation program has been increasing year by year, with as many as 500,000 trees being planted in one year on provincially owned and privately owned marginal and submarginal land. The forest management programs include the provision of access roads into Crown land areas and woodlot improvement; improvement cuts act as demonstration areas to the public, 4-H Forestry Clubs, and Boy Scout and Girl Guide groups. Fire protection is not too serious a problem. Wooded areas are relatively small and scattered and are all accessible by road so that equipment can be rushed to the scene of a fire quickly and easily.

Nova Scotia.—Of Nova Scotia's land area of 20,402 sq. miles, 16,274 sq. miles are classed as forested and 93 p.c. of the latter is regarded as productive. Although 91 p.c. of the forest land in Canada is held by the Crown in the right of the federal and provincial governments, only 22 p.c. is so held in Nova Scotia.

The provincial Crown lands are administered by the Department of Lands and Forests through a staff of foresters and rangers. Trained provincial personnel are also employed with some of the forest industries in the administration of privately owned forest lands. The Department administers the Lands and Forests Act as it pertains to all lands, and is responsible for forest fire suppression. Forest fire detection is facilitated through 34 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Fire suppression crews and rangers with equipment are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia, contributing directly or indirectly over \$100,000,000 to the gross provincial product annually. There are in operation some 400 sawmills of various types and sizes, one hardboard mill, two groundwood pulp mills, and two chemical pulp mills. These mills processed 200,000,000 ft. b.m. of sawn materials and 587,000 cords of round products in 1967. In addition, 106,000 cords of pulpwood were exported.

The reforestation program, active since the 1930s, is being expanded by the enlargement of the main Lawrencetown nursery and the establishment of a new forest nursery in the Margaree Valley of Cape Breton Island. Experimental work on soil capability and site preparation on fire barrens is being continued. About 1,000,000 seedlings are planted each year. Timber, pulpwood and Christmas trees are sold through public tender, and cutting on Crown land is done under recommendation of district foresters of the Department of Lands and Forests. Management cruises, regeneration studies and experimental cuttings are conducted on Crown lands, and a program of operating these lands under sustained-yield management plans is under way. Silvicultural techniques, including thinning, conversion cutting, aerial and ground fertilization, bog-ploughing and the use of silvicides, were applied to 5,000 acres of Crown lands in 1967.

A new provincial forest inventory, which is a continuous system designed to operate on a seven-year cycle was in its second year in 1968. Concurrently, a system of permanent sample plots will provide continuing data on growth and drain.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation. Investigations cover stand improvement, tree nutrition, cutting methods, and insect and disease activities. Extension projects include fire prevention, a film program for schools, distribution of information on forest and wildlife conservation, promotion of the Christmas tree industry, woodlot improvement, preparation of material for the mass media, and technical assistance to sawmill operators.

New Brunswick.—Of the total land area of New Brunswick (27,835 sq. miles), approximately 86 p.c. is classed as productive forest, of which the Crown, in right of the province, owns about one half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The results of a provincial forest inventory, part of the national forest inventory, were published in 1958. The total volume of standing timber in the province is estimated at 16,900,000 M cu. ft.; coniferous species make up 71 p.c. and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Natural Resources which also carries out duties in connection with game management and protection, provincial parks, mines, water, tourism and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and by representatives of the forest products industries. Forest Management Licences

authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Royalty is paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Forestry Branch in that field. The University of New Brunswick has also undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government and other interested organizations.

In the field of education, the University of New Brunswick offers undergraduate and graduate courses in forestry leading to B.Sc.F. and M.Sc.F. degrees. It is also responsible for the administration of the Maritime Forest Ranger School in conjunction with the Governments of New Brunswick and Nova Scotia and with private industry. The forest extension services of the University assist both government and private agencies in the direction and planning of various forestry extension programs. The provincial Department of Agriculture also provides an expanding extension service to the owners of farm woodlots.

Quebec.—The forests of Quebec extend over an area of some 378,000 sq. miles, lying between the southern boundary of the province and an irregular line roughly following the 52nd parallel of latitude on the north, an irregular line following the Atlantic Coast to the east and the Ontario boundary to the west. Of these forests, 34 p.c. are limits or reserved for specific purposes under forest management plans; their main purpose is to supply pulp and paper mills and sawmills. The vacant forests, comprising 56 p.c. of the forest area, have not as yet been completely inventoried or managed although some logging is being done in accessible areas of northern Quebec. In the near future, this forest potential will be fully managed to meet the ever-increasing need for wood products. Private forests account for about 10 p.c. of the total and for about one quarter of the annual cut.

Public forest management is the responsibility of the Woods and Forests Branch of the Quebec Department of Lands and Forests, and includes management, control and supervision. Under certain circumstances when the interest of a group so requires, the Department may engage in the management of private forests. The Woods and Forests Branch is also involved, both directly and through various organizations, in forest fire protection and insect and disease control. Nurseries are operated throughout the province to supply plants necessary for restocking areas where natural reproduction is inadequate. The present nursery stock totals about 70,000,000 seedlings.

Because Quebec's forests are of prime importance to the economy of the province and to that of Canada, the Department maintains continual revision of its forest policies in line with progress in all aspects of forestry, with a view to increasing this valuable capital asset and its returns.

Ontario.—The boundaries of Ontario enclose an area of 412,582 sq. miles—83 p.c. land and 17 p.c. water. Forest lands comprise 75 p.c. of total land, of which 164,600 sq. miles are classified as productive. The Crown owns 90 p.c. of the productive forest land. Although 84 tree species (exclusive of the hawthorns) occur within Ontario, four species (black spruce 29 p.c., poplar 19 p.c., jack pine 13 p.c., and white birch 11 p.c.) account for almost three quarters of the total volume of standing trees. The total volume of merchantable standing timber is estimated at 111,000,000 M cu. ft.—60 p.c. softwoods and 40 p.c. hardwoods.

Crown forests are administered and managed through the Department of Lands and Forests, which has 10 branches at Head Office and 21 forest districts (grouped within three regions). The Branches may be classified as service (Accounts, Law, Operations, Personnel, and Research) and operating (Fish and Wildlife, Forest Protection, Lands and Surveys, Parks and Timber). The list of operating Branches indicates that a multi-use concept of forests is practised but only the programs that foster the growth and use of timber as a crop are discussed here.

Management.—The original function of the Timber Branch was to arrange for the orderly sale of timber and this important function is still carried out along traditional lines—operators are granted a licence to cut specified timber for which they pay stumpage at contractual rates on the measurement (scale) of products removed. However, the details and techniques of utilization are undergoing constant improvement. Although Ontario's forest-based industries have long been a Canadian leader in terms of diversity of products and value of shipments, there is still a surplus of timber over actual cutting in the province. To ensure the continuing supply of timber of the type required by industry, an effective management policy has been conceived. Continuing forest inventories, using aerial photographic methods in which the province pioneered, provide an up-to-date record of the forest wealth, showing the species and other characteristics of stands and their geographical distribution. Inventory data are then applied to management planning; the province has been divided into 205 management units, each homogeneous with respect to forest and use patterns. Long-term plans set out regulations on the volume and location of cuttings and include programs for regeneration and tending that will sustain yields. As of 1968, 170 plans (78 Crown, 66 company, and 26 agreement forest) were completed for approximately 190,000 sq. miles.

The Timber Branch is also responsible for the regeneration, tending and improvement of the forests on Crown lands. It operates 10 forest tree nurseries (with supporting tree seed collection, treatment and storage plant) currently geared for an annual output of about 100,000,000 units by 1970-71.

While the Department, directly or indirectly, supervises all planting projects on Crown lands, regeneration agreements have been signed with all major licensees whereby they assume the direct responsibility for the conduct of planting projects, receiving payment at an agreed rate for work completed. Similarly, other projects, such as site preparation for the planting, may be performed by the companies under the same agreement.

During 1967, 39,500,000 nursery-produced trees were planted on about 58,500 acres of Crown lands. The tubed seedling program continued in 1967 and a total of 18,600,000 tubed seedlings were planted on approximately 17,000 acres. Other annual silvicultural treatments included the direct seeding of 10,000 acres, treatment for natural regeneration on 28,500 acres and stand improvement (cleaning, thinning, pruning, etc.) on 35,700 acres. In addition, Ontario's first aerial application of fertilizers for forestry purposes took place in June 1967. Nitrogen, in urea form, was applied on a small scale in the Sault Ste. Marie District. In all, 150,000 acres were silviculturally treated in 1967 to promote regeneration or to improve the forests.

For half a century, Ontario has had enabling legislation that permits municipalities and conservation authorities to place abandoned and submarginal agricultural lands, to which they have acquired title, under agreement with the Department of Lands and Forests, which undertakes to plant and manage the properties for a specified period of time—usually 50 years. Nearly 220,000 acres currently under such agreements have been managed intensively, the plantations receiving regular thinnings. The trees removed are in demand for pulpwood, posts, poles and sawlogs, making the undertakings financially attractive. In addition, the properties that are close to centres of population are acquiring tremendous value as recreational areas.

Owners of private land may purchase planting stock for forestry purposes from government nurseries at nominal prices and may also receive free professional advice on any forestry matter, including silviculture, harvesting and marketing. Under the Woodlands Improvement Act, 1966, it is possible to have planting and improvement work carried out completely under government direction and mainly at its expense. In return, the owner is required to meet a few modest demands that ensure his good faith. This program has, in three years, planted nearly 10,000 acres of idle land, and updated forest management on 16,000 acres of privately owned land.

In Ontario, the utilization of timber crops, the processing of forest products and the distribution of commodities of wood to markets are functions of private enterprise. Pri-

mary mills licensed in 1966 and supplied principally from provincial forests include 26 pulp and paper mills, 28 veneer and plywood mills and 890 sawmills of all types. Although the consumption trend for wood is upward, the costs of wood at the mills have also been increasing and this has led to increased mechanization and, in turn, to entirely new technologies of logging and product transfers. These changes have put pressure on the traditional methods of wood measurement, and the Department has adopted or is further testing alternative practices including (1) tree-length scaling, (2) weight scaling, (3) sample scaling, (4) measurement of log diameters to the full inch, and (5) log grading. In addition, the data and the invoicing of licensees are being computerized.

Certain parts of the Crown forests remain under-developed. For such areas, the Economics Unit has undertaken feasibility studies and has had a principal role in getting new firms to establish. Other functions of the Unit include co-operation in expanding the available statistical information for the forestry sector, development of economic guides for timber management, analysis of current manufacturing costs and market prices, evaluation of the impact of policy decision and economic service to other Branches.

Protection.—The area under organized forest protection in Ontario totals 180,275 sq. miles and includes the main central band of accessible forests. This area is organized into 20 fire districts and further subdivided into 54 chief ranger divisions for the purpose of forest protection. South of this area, in the highly developed agricultural counties of southern Ontario, the municipalities are responsible for fire control. The vast inaccessible areas to the north of the fire districts, totalling over 134,000 sq. miles, do not support significant stands of merchantable timber and, except for communities or other special values, are not protected. Within the fire districts, agreements were in effect in 1968 with 216 municipalities and 250 timber licensees for the prevention and control of forest fires. An agreement was also in effect with the Federal Government for the protection by the Ontario Department of Lands and Forests of 958,000 acres of Indian lands in the province. The average annual number of fires for the 1959-68 period was 1,435 and the average annual burn was 142,674 acres.

Forest fire detection is accomplished through a combined lookout tower and aerial patrol system as well as reports from the public. During 1968, chemical drop tests were conducted with Twin Otter, Turbo Beaver and Canso aircraft to determine chemical concentration and drop pattern relationships. Prescribed burning for hazard reduction and site preparation purposes was carried out on 28 burns covering 4,235 acres.

The new water-bombing system, utilizing the interior of aircraft floats to carry the water load was applied on 147 fires. The aircraft fleet as of Jan. 1, 1969 consisted of 28 Turbo Beavers, 10 Otters, two Twin Otters and one Super Widgeon; five helicopters were leased during the fire season. The communications system included 339 ground stations, 277 lookout tower radios, 15 patrol vessel radiotelephones, 618 mobile radiotelephones, 1,344 portable fireline radios, 41 aircraft radio installations and 60 portable aircraft radiotelephones.

Forest pest control in 1968 was highlighted by the spruce budworm spraying in northwestern Ontario, where 275,000 acres were treated. Small acreages on Crown-owned and Crown-managed areas were also treated in 1968 for white pine weevil, European pine sawfly, white pine blister rust and fomes root rot.

Manitoba.—The administration of Manitoba forests is controlled by the Forestry Branch of the Department of Mines and Natural Resources. The Province is divided into four regions, each under a Regional Director who is responsible for the field administration of forests in his region. The Regional Director works under policy guidelines established by the Forestry Branch, relating to timber disposal reforestation and fire protection.

The Forestry Branch co-ordinates control measures for the propagation, improvement and management of the forests, the harvest of forest products, and forest inventory surveys. A nursery station is maintained to supply stock for reforestation of denuded Crown land and some natural seed areas have been established for nursery stock. Seedlings are supplied to farmers for shelterbelts and woodlots and to commercial Christmas tree producers and an average of more than 4,000,000 are planted each year in reforestation projects on Crown lands. The program of forest stand improvement comprises thinning, clearing and chemical spraying to remove undesirable species and encourage growth of preferred trees. Forest inventories cover about 5,500 sq. miles annually and, on the basis of these inventories, working plans with annual allowable cuts on a management unit basis have been brought into operation.

Timber-cutting rights are awarded by Forest Management Licences, Timber Sales and, in certain cases (particularly for salvage operations), by Timber Permits. Forest Management Licences may be granted for periods of up to 20 years and are renewable; Timber Sales may be for varying periods from one year upward and Timber Permits for periods of up to one year. At present, one long-term Pulpwood Berth with an area of 2,745 sq. miles and 10 long-term Timber Berths, all granted prior to 1930, are in force. A second Pulpwood Berth agreement was signed early in 1966, covering the construction of a pulp mill and sawmill at The Pas in northern Manitoba.

The area of the province under forest fire protection is 128,370 sq. miles with zones of priority established in the less accessible areas. Fires are detected through a comprehensive network of lookout towers and supporting air and ground patrols, all tied together by radio and Departmental or public telephones. Two Canso water-bombers and two helicopters are rented for the worst of the fire season to supplement the nine aircraft of the Manitoba Government Air Service.

Manitoba co-operates with several federal services which maintain two research areas in the province, and works closely with federal authorities in investigating and controlling forest damage resulting from insects and diseases. Public education in the fields of fire prevention and forest conservation is carried out and use is made of all usual methods including radio, television, newspapers, signs, talks to school children and club members, film tours, etc.

Saskatchewan.—The forests of Saskatchewan are located mainly in the northern half of the province and cover 117,738 sq. miles, or 53 p.c. of the total land area. Provincial forests constitute approximately 92 p.c. of all forest land in the province and are managed and developed by the Forestry Branch of the Department of Natural Resources.

The Forestry Branch, consisting of four divisions—Fire Control, Forest Management, Inventory and Silviculture—is responsible for developing and evaluating forest policies and management programs. The responsibility for carrying out such policies and programs is borne by the various regional administrative authorities. For purposes of resource administration, the province, with the exception of the most northern portion, is divided into three regions, each under the supervision of a regional superintendent. The regions are subdivided into conservation officer districts which vary in size according to resource base and population to be served. In the most northerly part of the province, because of various special programs with northern residents, resource administration is the responsibility of the Northern Affairs Branch of the same Department. Close liaison is maintained between the Forestry Branch and the various regional authorities.

A major responsibility of the Forestry Branch is the development of techniques in the prevention, detection and suppression of forest fires. A network of 74 lookout towers equipped with two-way radios is maintained throughout the province and is supplemented by four aircraft on regular patrol duty during the high-hazard periods. Northern Saskatchewan's communication system, with more than 1,300 two-way radio sets in

operation in towers, vehicles, aircraft and forest camps, plays a vital role in the detection and suppression of forest fires. These activities are assisted by the use of three helicopters and seven aircraft equipped for water dropping.

Alberta.—The 157,595 sq. miles of provincial forest in Alberta are administered by the Alberta Forest Service of the Department of Lands and Forests at Edmonton. The Service, headed by the Director of Forestry, is composed of five Branches—Administration, Forest Protection, Forest Management, Forest Surveys and Planning, and Forestry Training. For ease of administration the forest area is divided into 11 Forests, each responsible for the forest within its boundaries. These Forests are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his superintendent. Each Forest staff includes: forest superintendent, fire control officer and assistant, forester, mechanical foreman, carpenter foreman, equipment operators, scalers, land-use officers, radio operators, clerks, stenographers, and seasonal help such as standby fire crews, lookout men, general labourers and construction crews. Some Forests employ minimum security crews on management, protection and construction projects.

The Administration Branch supervises all branches, maintains general control over revenue and expenditure, maintains the equipment inventory and deals with personnel.

The Forest Protection Branch has charge of all phases of protection including prevention, detection, suppression and use of forest and prairie fires. The Branch also plans, supervises and executes the construction and maintenance of the road and building programs and supervises the radio communication facilities.

The functions of the Forest Management Branch include the acceptance and approval of management and annual operating plans prepared for leased and licensed Crown lands, implementation of management plans prepared by the Department, supervision of proper land-use practices and the disposal of Crown timber. This extends to all phases including processing of timber applications, selection of timber to be sold, cruising of merchantable timber, inspection of cutting areas to ensure proper logging and utilization practices, scaling of forest products, collection of dues and fees and reforestation programs for areas denuded by cutting and fire. It is also responsible for the implementation and supervision of the timber quota system.

The Forest Surveys and Planning Branch maintains the provincial forest inventory and prepares and maintains detailed inventories by management units; prepares long- and short-term management plans; provides timber application forest-type maps; conducts other work pertaining to photogrammetry and forest-cover maps; develops and supervises recreational area plans; provides regulation of geophysical activities in the forest area; and provides technical drafting and mapping services.

The Forestry Training Branch prepares training material and conducts training programs for Departmental personnel and other persons concerned with activities of fire control, forest management, forest protection and conservation. It also provides the facilities and instruction for the second year of a two-year forest technology course provided by the Northern Alberta Institute of Technology, and supervises the Provincial Junior Forest Ranger Program.

One Forest and part of two others are included in the Rocky Mountains Forest Reserve. This area is administered by the Alberta Forest Service but decisions of the Director of Forestry are based on policies of wise watershed regulation formed by the Eastern Rockies Forest Conservation Board. The Board comprises one federal and two provincial members. This reserve includes part of the headwaters of the main Prairie Provinces river system. Research in general is carried out by the federal Department of Forestry and Rural Development, which maintains the Kananaskis Experiment Station.

British Columbia.—The productive forest land of British Columbia is inventoried (1958) at 208,411 sq. miles with an additional 59,227 sq. miles of forest land classed as non-productive. Of the productive area, immature timber occurs on 95,739 sq. miles;

84,275 sq. miles carry mature timber estimated at 251,000,000 M cu. ft.; and 28,397 sq. miles are unclassified, including areas of burn, cut-over or windfall not yet re-stocked.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision into Ranger Districts, of which there are approximately 25 in each Forest District. Twelve directional, servicing or policy-forming Divisions constitute the Head Office of the Forest Service at Victoria.

Efforts continue to bring British Columbia's forest resources under sustained-yield management and the forest industries are making progress toward more complete utilization of their raw materials. The problem is urgent despite the fact that, with a present annual scale of approximately 1,573,000 M cu. ft., the total inventory would appear sufficient to support current needs in perpetuity. One of the more spectacular results of sustained-yield administration has been the swinging of a greater proportion of the annual forest harvest to the interior of the province. The over-cut coast (wet belt) forests now account for about 57 p.c. of the total forest cut each year and the interior for 43 p.c. For all practical purposes, the entire interior forest is publicly owned; the great majority of privately owned, leased or licensed forests are on the coast.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence, which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area. Tree Farm Licences are subject to re-examination for renewal every 21 years. Provincial Forests, Pulp Harvesting Forests and Public Sustained-Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Of major interest is the Pulpwood Harvesting Area plan, unique in North America, which calls for the integration of a 'sawlog' economy with a new pulp industry; five of these Areas have now been established—three in Prince George Forest District, one in Prince Rupert Forest District and one in Kamloops Forest District. Management, silviculture, roadbuilding and protection on such Areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and those Timber Sales issued outside 'regulated' areas.

Forest fire prevention techniques and organization for effective forest fire suppression are vital aspects of planned sustained-yield management. A greatly expanded pulp industry, added to the long-established logging and sawmill industries, has increased the necessity for more adequate fire control. Extensive use is made of aircraft under various terms of contract. Air tankers and fire-spotter aircraft are employed during the fire season and helicopters and other aircraft are employed under contract for patrol duties and for the transport of fire suppression crews. The rugged topography and the many remote and sparsely populated areas of the province demand the availability of a variety of transportation methods to tie in with fast discovery of and early attack on forest fires.

Close liaison with the Forestry Branch of the federal Department of Fisheries and Forestry through facilities at Victoria and Vernon provides detailed information on insect and fungal enemies of the forest and on fire research.

Subsection 3.—The Pulp and Paper Research Institute of Canada

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was reorganized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out fundamental research and some applied research in the fields of woodland operations and pulp and paper mill operations. In addition, in co-operation with McGill University,

it trains postgraduate students who are working toward master's and doctorate degrees in physical chemistry, wood chemistry, or chemical and mechanical engineering, and whose theses subjects lie in fields of interest to the pulp and paper industry.

The Institute's head office and main laboratories are located in Pointe Claire on the western outskirts of Montreal in a recently enlarged building constructed by the Government of Canada. Space provided by the University is also occupied on the campus of McGill University by Institute staff and students involved in the graduate education program. The Institute's facilities include: organic and physical chemistry, physics and engineering laboratories; pilot plants for chemical pulping, pulp and chip refining and

Greenhouse and field studies are carried out by the Pulp and Paper Research Institute of Canada to determine the most suitable fertilizer prescriptions for particular forest areas. Correcting nutritional deficiencies by fertilizer, possibly applied by aircraft every five to ten years, can increase the yield of wood per acre.

waste liquor pyrolysis; a greenhouse and other facilities for woodlands research; an extensive library; shops and special facilities for pulp and paper testing and for photographic and microscopic (both light and electron) studies of wood, pulp and paper. It has a staff of about 195.

The Institute's research activities comprise a basic program in pulp and paper research and in woodlands research, contract research, and technical services. The basic pulp and paper research program is supported by assessments from the Maintaining Membership (some 40 companies, representing more than 100 mills and about 95 p.c. of the total production of the Canadian industry) and by a grant from the Canadian Pulp and Paper Association. The woodlands research program is supported by assessments on all member companies of the Canadian Pulp and Paper Association east of the Rockies that use pulpwood and by a grant from the Association. Both programs comprise research of interest to the industry broadly, as distinct from that which is the concern of a single company only.

The projects in the basic programs range from studies of the growing seedling in the forest to the converted pulp and paper product, and fall into seven broad classifications: woodlands, mechanical pulping, chemical pulping, paper making, process control, product quality and waste utilization. The Institute is regarded as a centre for broad, long-range and uninterrupted studies of basic principles and for major engineering research and development projects which individual pulp and paper companies would find difficult to justify if the costs were not shared. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not normally have.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 40 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their theses topics. The Head of the Institute's Wood Chemistry Division, who is also the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin and hemicelluloses. The Head of the Institute's Physical Chemistry Division, also a Professor in the McGill Chemistry Department, supervises graduate student work in polymer, surface and colloid chemistry with particular reference to those aspects that pertain to the physics and chemistry of pulp and paper. An Associate Professor of Chemical Engineering at McGill, who is a consultant to the Institute, directs graduate students in a variety of chemical studies. In addition, the Head of the Institute's Wood and Fibre Research Department, who holds a teaching appointment in McGill's Department of Mechanical Engineering, supervises graduate student investigations on such subjects as supercalendering of paper and frictional processes in polymeric systems. Other staff members who hold concurrent honorary positions at McGill as Research Associates assist in this student program.

The Institute also undertakes contract research projects on a cost-reimbursement basis for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment and the study of the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which stocks bibliographies, abstracts, translations and critical reviews for the use of the scientific staff and the industry.

PART I.—FISHERIES*

Section 1.—Fisheries Resources of Canada

Fishing is Canada's oldest primary industry. The fishery on the Atlantic Coast has been well documented from the early 16th century when fishermen from Portugal, the Basque country of Spain, Normandy and Brittany in France, and Devonshire in England were taking fish from the rich fishing banks off Newfoundland. On the other hand, there is little in authentic records concerning Pacific Coast fishing prior to the arrival of England's intrepid Captain James Cook in 1778. That famous navigator chronicled that the Pacific Coast off present-day British Columbia abounded with fish and other species of marine animals such as sea otters, whales and seals.

Even though the relative importance of commercial fishing to the national economy has, of course, diminished greatly within the past century, the industry has undergone spectacular expansion and is still of paramount consequence to the coastal provinces and to inland areas adjacent to waters where commercial fishing is pursued.

Canada's main fishing effort is centred in the northwest Atlantic and the northeast Pacific waters, within range of home ports. Adding to the total production is a fairly large inland fishery based on the country's extensive bodies of fresh water. The Great Lakes which have an area of about 61,000 sq. miles yield a number of species, including whitefish, lake trout, pickerel, sauger, northern pike, yellow perch, white bass, sturgeon, smelt, carp and various species of chub. The 300 fishing lakes lying in an area of about 35,000 sq. miles in the Prairie Provinces yield rich harvests of whitefish, lake trout, pickerel, pike and other species and the 10,000-sq. mile Great Slave Lake as well as smaller lakes in the Northwest Territories also produce quantities of lake trout and whitefish.

* Sections 1 and 2, and part of Subsection 1 of Section 4 were prepared by the Information and Consumer Service of the Fisheries Branch, Department of Fisheries and Forestry, Ottawa.

A stern trawler operating out of Nova Scotia trails a huge net in its wake. This type of vessel, equipped with the latest in electronic hardware for finding fish and for navigation, operates efficiently in heavy seas and has brought in as much as 390,000 lb., mostly cod, on one ten-day trip.

More than 150 species of fish and shellfish are harvested by Canadian fishermen. The most important species of the sea fisheries include groundfish, such as cod, haddock, pollock, hake, etc., herring, halibut, salmon and lobsters. More than \$200,000,000 is represented in fishing boats and catching gear and investment in shore facilities is also well over \$100,000,000. A work force of about 80,000 persons is employed in fishing operations and of these about 30,000 depend solely on the catching of fish for their livelihood and 20,000 are employed in processing plants.

The northwest Atlantic fishing grounds are the richest in the world. The offshore banks cover about 200,000 sq. miles and are exploited by the fishing fleets of more than a dozen nations. Intensity of fishing effort by all fishing fleets is reflected by an almost spectacular increase in total catch. For instance, between 1954 and 1966 the over-all yield rose from 1,847,000 tons to 3,189,000 tons and Canada's catch alone increased from 634,000 tons to 974,000 tons.

The groundfish harvest in the Atlantic by Canadian vessels and those of other nations is immense. Other important species yielded by this vast fishing area include halibut and other flat fishes, herring, mackerel, turbot, hake, cusk, pollock, salmon, swordfish and tuna. Crustacea include lobsters and crabs, while scallops comprise the bulk of molluscs landings. Oysters and clams are harvested in inshore waters.

Salmon, halibut and herring are the principal species harvested in the Pacific Coast fisheries although a variety of other fish and shellfish are also taken. The catches of the five Pacific salmon—sockeye, chinook, coho, chum and pink—are regulated for conservation purposes, and extensive biological and engineering facilities are maintained in order to safeguard and develop these important stocks. Halibut, which are fished in the Gulf of Alaska and the Bering Sea, are also closely protected by regulations to maintain stocks at optimum levels. Herring are plentiful and are landed in quantity for reduction into fish meal and oil.

Section 2.—Commercial Fishing and Marketing, 1967

The history of Canadian sea fisheries during the past decade has been one of accelerating growth but in 1967 there was a setback from the record level of landings in 1966 of 2,600,000,000 lb. to 2,351,000,000 lb. because of marketing and production problems; earnings to fishermen amounted to \$149,600,000, a figure of \$11,500,000 below that of 1966. There was no significant change in the freshwater fisheries from 1966. They yielded about 50,000,000 lb. of various species, and brought the fishermen nearly \$19,000,000.

The results of the sea fisheries were better in some areas but these improvements were offset by declines in others. For instance, higher landings of herring on the Atlantic Coast were barely enough to compensate for a large decrease in Pacific herring catches. Herring catches on both coasts accounted for about a third of the volume of all Canadian fisheries in 1967.

Difficulties in marketing presented the most serious problems in the Atlantic fisheries for groundfish and the reduction industry. Total landings increased by 136,000,000 lb. over 1966 and surpassed the 2,000,000,000-mark for the first time, largely because of larger herring catches, but fishermen's earnings were only slightly above the 1966 record of \$100,000,000.

Despite the addition of new and larger vessels, the volume of groundfish landed was 1,135,000,000 lb. about 68,000,000 lb. less than in 1966. The decline was particularly evident in the landings by large trawlers (70 feet or over) which were down by 40,000,000 lb. or 7.4 p.c. The situation is largely explained by poor market prices which curtailed fishing for some species, scarcity of resources on the grounds and a shortage of crew members for side-trawlers. Weak market conditions continued during the year for groundfish fillets and blocks although the market strengthened slightly at the end of the year. As a result, prices to fishermen for groundfish were somewhat lower than in 1966 and the value to fishermen declined by about 8 p.c. from \$51,400,000 to \$47,100,000.

The only major fishery that experienced an increase in 1967 on the Atlantic Coast was the herring fishery. The expansion which began a few years ago continued during the year; 763,000,000 lb. valued to fishermen at \$8,200,000 were landed, an increase of nearly 40 p.c. in volume and of 32 p.c. in value. Of the quantity landed, approximately 500,000,000 lb., or 65 p.c., were used for reduction compared with 260,000,000 lb. or 48 p.c. in 1966. The increase in landings was particularly large in Nova Scotia and Newfoundland.

Lobster landings at 35,000,000 lb. were down by about 6 p.c. due mainly to a late start because of ice and weather conditions in some areas of Newfoundland and a poor catch in Northumberland Strait. The value of the catch, however, at \$23,300,000, was up 6 p.c. as higher prices more than compensated for the lower catch.

Canada's Pacific Coast landings dropped sharply from 575,000,000 lb. in 1966 to 320,000,000 lb. in 1967 and the value dropped to \$49,000,000 from the record high of \$60,600,000 in 1966. Despite this drop, however, the 1967 landed value exceeded the 1961-65 average.

The salmon catch in 1967 declined 18 p.c. from 162,000,000 lb. to 133,000,000 lb. but because of the large percentage of higher priced sockeye taken the landed value of all salmon totalled \$36,000,000, only 7 p.c. below the record of 1966.

Landings of halibut by Canadian fishermen at United States ports on the Pacific Coast totalled 26,000,000 lb., nearly 6,000,000 lb. less than in 1966. This drop was mainly the result of jurisdictional labour disputes centred in the Prince Rupert area. The landing pattern of halibut also changed and landings in Vancouver nearly doubled from 5,500,000 lb. in 1966 to 10,600,000 lb. in 1967 while those at Prince Rupert dropped from 18,200,000 lb. to 9,000,000 lb. The landed price for halibut was down sharply from the high levels of 1966, the average reported being 25 cents compared with more than 35 cents in 1966.

Pacific herring landings for 1967 reached only 116,000,000 lb. valued at \$1,800,000, about one quarter of the average production of the past ten years. As a conservation measure, herring fishing for reduction purposes was closed in October for the remainder of

the year. This is the period of the year when most of the herring is caught on Canada's West Coast. After several years of increasing groundfish landings off British Columbia, the catch fell sharply in 1967, partly a result of market and production conditions, the jurisdictional labour dispute, and a strike that directly affected groundfish landings early in the year.

Fishery Exports.—Export of Canadian fisheries products during 1967 had an all-time record value of \$235,500,000—an increase of 7.5 p.c. over the previous record of \$219,100,000 set in 1966. Shipments went to 77 countries with dried salted groundfish and canned fish the most prominent export items. The value of over-all shipments of canned fish and shellfish reached \$42,900,000, compared with \$28,500,000 in 1966. Canada now stands in second place following Japan, among the world's leading fish exporters in terms of value.

The Canadian fisheries industry faced a precarious position at the outset of 1967. Prices generally for most frozen fisheries products declined in the important United States market during the fall of 1966. However, over-all stocks of frozen fish and shellfish in both Canada and the United States tended to lessen during the first part of 1967 and prices to wholesalers in Boston, Massachusetts, notably for frozen cod blocks, eventually increased from a low of 19 or 20 cents a pound to 25 or 26 cents a pound during the late fall months. There was an air of cautious optimism in the industry that the trade had weathered possibly the most serious storm in the history of the fisheries.

An innovation in 1967 was the export of frozen pink salmon to European and other outlets. The restriction on exports of pink salmon in the frozen state, which had been implemented in 1948, was relaxed in August 1967, and a fairly large volume entered export trade. Although the over-all 1967 canned salmon pack was lower than in the previous year, the largest sockeye output since 1958 was processed, some 559,000 cases being packed in comparison with 407,000 cases in 1966.

All Fish Products.....	221.72	235.44

The trade welcomed the progress made in the Kennedy Round of GATT negotiations in eliminating duties on numerous fisheries products in the United States as well as reducing tariffs on a significant number of fisheries items in both the United States and Europe. This was tempered by the devaluation of currencies in several traditional markets for fisheries products including Britain and countries in the Caribbean area.

The United States has always been the main outlet for the products of the Canadian fishing industry. However, in 1967 exports to that country dropped to \$145,029,000 from \$150,647,000 in the previous year and the proportion of exports moving to that market dropped to 61.6 p.c. from 68.7 p.c. in the same comparison. On the other hand, exports to Britain were up from \$21,384,000 to \$32,755,000 and those to the other European countries importing Canadian fish and fish products were also higher, Portugal showing the greatest percentage increase. The five most important markets—United States, Britain, Jamaica, France, and Belgium and Luxembourg—together took 83.5 p.c. of the total Canadian exports, the remaining 16.5 p.c. going to many countries in all parts of the world.

About 62 p.c. of total exports, by value, are in the form of fresh and frozen fish and shellfish, of which the major portion goes to the United States. There was a \$3,000,000 decrease in the exports of this form in 1967 mainly because of a lower demand in the United States; exports to Britain moved up slightly. Atlantic and Pacific frozen salmon was in demand in 1967. Shipments of frozen coho salmon amounting to 9,700,000 lb. worth \$7,200,000 went to 21 countries with France, Britain, Belgium, the United States and the Netherlands the major outlets. The United States, France and Britain also purchased significant quantities of frozen spring salmon, sales of which were up considerably, reaching 84,000,000 lb. worth \$6,800,000.

The Canadian output of canned salmon in 1967 was 1,466,288 cases compared with 1,820,456 cases in 1966 but, perhaps because the pack of salmon in the United States was down drastically in that year and was also understood to be small in Japan and Russia, Canadian exports in 1967 reached 43,500,000 lb. valued at \$33,300,000 compared with 25,500,000 lb. valued at \$18,600,000 in 1966. The principal market for Canadian canned salmon was Britain although there were a number of other important outlets including Belgium, Australia, the Netherlands, France, Italy, Ireland, New Zealand, South Africa, etc.

The market position for salt fish was firm in the first part of 1967. There was no excessive carryover of stocks on the markets or in the fish producing countries. However, this situation changed in the late fall because of the devaluation of currencies in some of the leading markets, including Jamaica, and in such producing countries as Ireland, Spain and Denmark. Shipments of Canadian hard, dried, light salted cod and heavy salted cod were higher in 1967, amounting to some 51,400,000 lb. worth \$14,400,000 compared with the 1966 shipments of 41,700,000 lb. valued at \$10,600,000. The major markets for salt fish continued to be Jamaica, Portugal, Puerto Rico, Spain and Italy. Of considerable interest was the purchase of wet salt cod for further processing by West Germany (2,900,000 lb.), Portugal (1,900,000 lb.) and Norway (1,200,000 lb.).

Shipments of lobster in the shell, fresh or frozen, during 1967 were valued at \$15,300,000 as against \$15,200,000 in the previous year. The United States was the major market but the increasing demand accounted for important quantities being exported to France, Belgium, the Netherlands and West Germany. Shipments of lobster meat, fresh or frozen, went mainly to the United States although Britain purchased a considerable amount. Exports of canned lobster were worth \$1,900,000, down from the 1966 returns of \$2,600,000 mainly because of reduced landings. The United States, Britain, West Germany, Sweden and Belgium were the principal outlets.

Exports of herring meal from both coasts amounted to 74,700,000 lb. worth \$5,900,000 compared with 73,400,000 lb. valued at \$6,900,000 in 1966. The United States and Britain were the only export markets indicated, the bulk going to the former.

Canadian exporters of fisheries products are kept informed of world demand and production, based on periodic reports received from Canadian Trade Commissioners around the globe. On-the-spot studies of leading outlets have been completed by officers of the Fisheries Division of the Department of Industry, Trade and Commerce. As a special service to the industry, that Department, in co-operation with the federal Department of Fisheries and Forestry and the Fisheries Council of Canada, which is an industry group representing most of the fishery product producers across the country, has sent fisheries missions to all of the leading fish producing and consuming countries of the world during the past several years.

Section 3.—Fishery Statistics

The review of commercial fishing and marketing given in the preceding Section covers the situation in 1967 and contains estimated figures for that year. At the time of the preparation of this Chapter, however, the latest statistics available in detail for both the primary production and fish products were those for 1966 contained in the following Subsections.

Subsection 1.—Primary Production

The value of the 1966 catch of seafish on the Atlantic Coast was at a very high level; it amounted to \$96,308,000, an increase of 1.4 p.c. over the 1965 value of \$94,988,000 and 11.6 p.c. over the five-year 1962-66 average of \$83,226,000. The cod catch at \$25,099,000 was the most valuable and lobster was second at \$22,038,000.

For the sixth consecutive year, the value of the Newfoundland catch was substantially higher than that of the previous year. The value of landings of all species was \$25,886,000 of which cod accounted for \$14,590,000. Cod landings at 34,540,000 lb. were lighter than in 1965 as were those of haddock, but landings of redfish, turbot (Greenland halibut), plaice and greyscale were again considerably increased.

The value of fish and shellfish landings by Nova Scotia fishermen in 1966 at \$46,738,000 was down slightly from the 1965 record of \$48,194,000. Lobster and scallops continued to be the most important species from the standpoint of income to the fishermen having a landed value of \$10,467,000 and \$7,290,000, respectively. Haddock was third at \$7,286,000 followed by cod, flounder and sole, swordfish, pollock and halibut.

New Brunswick fishermen also landed a more valuable catch in 1966 than in 1965. Lobster, herring and cod were the major sources of income to the fishermen, accounting for \$7,293,000 of the total value of \$11,136,000. The herring catch, which has been increasing steadily from a low of 56,269,000 lb. in 1961, reached 242,600,000 lb. in 1966 compared with the five-year 1962-66 average of 163,078,000 lb.

Returns to Prince Edward Island fishermen in 1966 of \$5,998,000 were below the 1965 level. Lobsters, at \$3,926,000, made up 65 p.c. of the total and cod at \$535,000 was next in importance.

The value of all Quebec landings increased to \$7,278,000 from \$6,938,000 in 1965 as a result of increased landings of redfish, lobster and plaice.

The value of British Columbia landings in 1966 was \$60,659,000, and all-time high, up considerably over the five-year 1962-66 average of \$49,236,000. Annual fluctuations in the volume of salmon taken, which make up over half of the total landings, materially affect the total value of the catch. Salmon landings in 1966 were 162,852,000 lb. valued at \$38,654,000 compared with 90,190,000 lb. valued at \$25,958,000 in the previous season. The 1966 catch of tuna at 587,000 lb. was a record catch.

3.—Quantity and Value of Sea and Inland Fish Landed, by Province, 1962-66

NOTE.—Figures for the years 1918-60 are given in the corresponding table of previous Year Books beginning with the 1947 edition.

Subsection 2.—Fish Products

According to commodity surveys conducted by the Dominion Bureau of Statistics, the value of sea and inland fish products produced at all industrial levels, including the value to fishermen, amounted to \$355,590,000 in 1966; this was an increase of 13.7 p.c. over 1965 and the highest amount on record. Most of the increase over 1965 took place in the salmon fishery of British Columbia.

6.—Value of All Products of the Fisheries, by Province, 1962-66

The annual output of canned salmon fluctuates considerably with the extent of the catch, as is shown in Table 8. This product has traditionally been the most important of the industry, but the demand for Atlantic Coast frozen groundfish fillets and blocks has been rising so rapidly that the value of the Atlantic products has been in first place since 1963.

Section 4.—Governments and the Fisheries

Under the British North America Act, the Federal Government has full legislative jurisdiction over the coastal and inland fisheries of Canada. The Federal Parliament therefore enacts all laws for the protection, conservation and development of the fisheries and responsibility for the administration and enforcement of these laws is vested in the

Fisheries Branch of the federal Department of Fisheries and Forestry. In some provinces, however, this administration has been delegated, by arrangement, to provincial agencies.

Specifically, the federal Fisheries Branch administers all tidal or sea fisheries except those of the Province of Quebec, and also administers the freshwater or non-tidal fisheries of the four Atlantic Provinces, the Yukon Territory and the Northwest Territories. The Provinces of Ontario, Manitoba, Alberta and Saskatchewan administer their own freshwater fisheries and in British Columbia the provincial government controls freshwater species but the Federal Government is responsible for marine and anadromous species. Administration of the fisheries of National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Indian Affairs and Northern Development.

Federal-Provincial Relations.—The mutual interest of federal and provincial governments in fisheries problems is recognized in the undertaking of joint studies and programs, frequently on a regional basis. Regional committees established in recent years have brought together representatives of all governments concerned for periodic discussion. Four groups have evolved: the Federal-Provincial Atlantic Fisheries Committee consisting of representatives of the Federal Government and of the Governments of New Brunswick, Newfoundland, Nova Scotia, Prince Edward Island and Quebec; the Federal-Provincial Committee for Ontario Fisheries; the Federal-Provincial Prairie Fisheries Committee comprising representatives of the Federal Government and of the Governments of Alberta, Manitoba and Saskatchewan; and the Federal-Provincial British Columbia Fisheries Committee.

Members of the Committees are the Deputy Minister of Fisheries of Canada and the Deputy Ministers of provincial departments responsible for fisheries. Sub-committees make recommendations for industrial development, research and marketing problems. The main committee in each case co-ordinates, where practicable, all activities in the respective fields of responsibility of its members and suggests to the respective governments means of carrying out fisheries programs and projects of common concern. These include the development of methods and techniques in the catching of fish and of shore and plant facilities, and studies of the economics of fisheries to ensure that any proposed program of development is soundly based.

Co-operation between the federal Fisheries Branch and the provinces has taken the form of cost-sharing arrangements on joint projects. Legislation enacted in 1966 grants to the federal Fisheries Branch further powers to enter into such agreements for purposes of modernizing, mechanizing and diversifying the nation's fisheries. The Fisheries Development Act, 1966 (SC 1966, c. 18) served to streamline the operations of the Department by incorporating several of the development activities undertaken under earlier legislation. It empowers the Minister of Fisheries (now Minister of Fisheries and Forestry) to undertake projects "(a) for the more efficient exploitation of fishery resources and for the exploration for and development of new fishery resources and new fisheries; (b) for the introduction and demonstration to fishermen of new types of fishing vessels and fishing equipment and of new fishing techniques; and (c) for the development of new fishery products and for the improvement of the handling, processing and distribution of fishery products". The Act authorizes federal cost-sharing agreements with provinces, with private companies and with individuals or co-operatives. Financial assistance may be given for the construction and equipment, or modification, of commercial cold storages and mechanically refrigerated bait-freezing facilities to be used for the preservation of fishery products, and for the construction and equipment of fishing vessels. The Act also authorizes the conduct of economic studies in conjunction with universities or other educational institutions and provides for the establishment of advisory committees to assist in the implementation of fisheries development programs.

Subsection 1.—The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries and Forestry:—

- (1) The Fisheries Branch of the federal Department of Fisheries and Forestry with headquarters at Ottawa, Ont., and regional offices under Regional Directors at Vancouver, B.C., Winnipeg, Man., Quebec, Que., Halifax, N.S., and St. John's, Nfld.
- (2) The Fisheries Research Board of Canada with headquarters at Ottawa and biological, technological and oceanographic stations across Canada.
- (3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of each of these agencies is given in this Subsection.
